RE: Rayson Technology Co., Ltd.

FCC ID: QWOBTB-121

I have a few comments on this Application. Depending on your responses, kindly understand there may be additional comments.

1. Block Diagram: Please show what crystal oscillator frequency is used on the RF block diagram.
"FCC 2.1031 (5) A block diagram showing the frequency of all oscillators in the device.
The signal path and frequency shall be indicated at each block."
2. FYI. For the portable device, it is not required to provide the MPE test report if its output power level is less than the lower threshold listed in FCC exclusion list.
3. The carrier frequency of channel 0 shown on page 21 should be 2402MHz. but not 2400MHz.
Please correct it.
4. Harmonics emissions of vertical polarization were provided only on the test report, which are not enough. Please provide the measurement data on harmonics emission of horizontal polarization.

Best regards,

~~~~~

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
