Confidentiality Request

To: FCC

Re: Submission of remote control documents for R2ESIA06

Seeley International formally requests the electronic schematics of the Breezair Remote Control product to be held confidential.

The schematics are shown in the "**Design specification for RF Handset.doc**" at "**8.0 Schematics**" on pages 5 through 7.

Justification: Seeley International products have been subject to direct and complete copying by other manufacturers in recent years (a total of 4 major products so far) and so Seeley International does not believe the publishing of electronic design schematics on the internet is in the best interest of maintaining its competitive advantage.

Seeley International also respects the need for the consumer to be able to identify the product they have purchased to confirm it has been investigated and approved by the FCC and so does not require the photo's or specifications to be held in confidence.

Kindest Regards,

Andrew Friebe
Senior Engineer
