CERTIFICATION OF COMPLIANCE

EpiValley Co., Ltd.

Lordland EZ Tower #511, 513, Gumi-dong, Bundang-Gu,
Sungnam-City, Kyunggi-Do, Korea

Dates of Tests: May 4 ~ 12, 2010

Test Report S/N: DRTFCC1005-0063

Test Site : DIGITAL EMC CO., LTD.

FCC ID.

R2NSWR-8225

APPLICANT

EpiValley Co., Ltd.

Classification	: Licensed Non-Broadcast Station Transmitter(TNB)
FCC Rule Part(s)	: §27(M), §2
EUT Type	: WiMAX Mobile Hostpot Router
Model Name	: SWR-8225
Serial number	: Identical prototype
TX Frequency Range	: 2501 ~ 2685MHz
RX Frequency Range	: 2501 ~ 2685MHz
Max. RF Output Power	: QPSK - 0.219W Conducted(23.40 dBm) 16QAM - 0.224W Conducted(23.50 dBm)
Emission Designators:	: 9M14G7D(QPSK) 9M13W7D(16QAM)
Date of Issue	: May 20, 2010

MEASUREMENT REPORT

1.1 Scope

Measurement and determination of electromagnetic emissions (EME) of radio frequency devices including intentional and/or unintentional radiators for compliance with the technical rules and regulations of the Federal Communications Commission.

§2.1033 General Information

Applicant: **Infomark Co., Ltd.**

Address: #801, KINS Tower, 25-1, Jeongja-Dong, Bundang-Gu, Seongnam-Si, Gyonggi-Do,
Korea

Attention: Heejun, Gu

- FCC ID: R2NSWR-8225
- FCC Classification(s): Licensed Non-Broadcast Station Transmitter(TNB)
- Equipment (EUT) Type: WiMAX Mobile Hostpot Router
- Quantity: Quantity production is planned
- Associated Channel BW: 10MHz
- Tx Freq. Range: 2501 ~2685 MHz
- Rx Freq. Range: 2501 ~2685 MHz
- Zone Format: PUSC
- DL : UL Symbol Ratio: 29 : 18
- Modulation(s): QPSK, 16QAM
- Code rates: QPSK1/2, QPSK3/4, 16QAM1/2, 16QAM3/4
- Antenna Type: PIFA Antenna
- FCC Rule Part(s): §27(M), §2
- Dates of Tests: May 4, 12, 2010
- Place of Tests: DIGITAL EMC
- Test Report S/N: DRTFCC1005-0063

2.1. GENERAL INFORMATION

This report contains the result of tests performed by:

DIGITAL EMC CO., LTD.

Address: 683-3, Yubang-Dong, Yongin-Si, Kyunggi-Do, Korea. 449-080

<http://www.digitalemc.com> E-mail : harveysung@digitalemc.com

Tel: +82-31-321-2664 Fax: +82-31-321-1664

Quality control in the testing laboratory is implemented as per ISO/IEC 17025 which is the "General requirements for the competent of calibration and testing laboratory".

3.1 DESCRIPTION OF TESTS

3.1.1 Test set-up configuration

The test set-up for RF testing is shown in the below picture. This device is connected to USB port of the notebook computer.

A PC(or Notebook) controls EUT to transmit rated output power under appropriate transmission mode and specific frequency.

A beceem diagnostic control panel(V.3.5.0) program is used for verifying a connection status between notebook computer and EUT and to control maximum transmitting power, channel selection, bandwidth.

A vector signal generator(VSG) of Agilent is used to supply the WiMAX signal sources to a EUT and an external trigger source to a spectrum analyzer. The trigger is set in such a way that the analyzer records power measurements only during the times in which the EUT is transmitting.

The WiMAX signal sources are provided by Beceem as below,

OBW	File name	
	PUSC Zone	AMC Zone
5MHz	N/A	N/A
	N/A	N/A
	N/A	N/A
	N/A	N/A
10MHz	T10D29U184Q12S175	N/A
	T10D29U184Q34S175	N/A
	T10D29U1816Q12S175	N/A
	T10D29U1816Q34S175	N/A

The WiMAX signal sources have 29:18 symbol ratio(Downlink : Uplink). This device will transmit control signaling at the first 3 uplink symbols and then use the rest of the uplink symbols for data traffic bursts in the uplink sub-frame. Measurements were taken in the 29:18 ratio, but since there was no energy in the control symbols, the effective power is only across 15 data symbols.

3.1 DESCRIPTION OF TESTS

(Continued...)

3.1.2 Occupied Bandwidth Emission Limits

- Part §2.1049, §27.53.(m)(2)(V), (6)

- (a) For fixed and temporary fixed digital stations, the attenuation shall be not less than $43 + 10 \log (P)$ dB, unless a documented interference complaint is received from an adjacent channel licensee.
- (b) Compliance with these provisions is based on the use of measurement instrumentation employing a resolution bandwidth of 1 MHz or greater. However, in the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed. The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emission are attenuated at least 26 dB below the transmitter power.

3.1.3 Spurious and Harmonic Emissions at Antenna Terminal

- Part §2.1051, §27.53.(m)(2)(V), (6)

The level of the carrier and the various conducted spurious and harmonic frequencies is measured by means of a calibrated spectrum analyzer. The spectrum is scanned from the lowest frequency generated in the equipment up to a frequency including its 10th harmonic.

3.1.4 Radiation Spurious and Harmonic Emissions

- Part §2.1053, §27.53.(m)(2)(V), (6)

Spurious and harmonic emissions between the lowest frequency generated in this device and up to 10th harmonic of the highest generated in this device are measured at 3-meter OATS. The equipment under test is placed on a wooden turntable located at 3-meters from the receive antenna.

This test is based on the use of spectrum analyzer employing a RBW/VBW = 5MHz(OBW: 5MHz) and 10MHz(OBW: 10MHz) and peak detector mode.

The receive antenna height and turntable rotations are adjusted for the highest reading on the receive spectrum analyzer. A antenna is substituted in place of the EUT. This antenna is driven by a vector signal generator for spurious emissions. The level of the signal generator is adjusted to obtain the same spectrum analyzer's reading level when EUT existed. After that conducted power at the input terminal of the transmit antenna is measured and this conducted power is corrected with antenna gain in dBi. This spurious level was recorded.

Note: Radiated Spurious Emission Measurements by Substitution Method according to ANSI/TIA/EIA-603-C-2004, Aug. 17, 2004

3.1 DESCRIPTION OF TESTS

(Continued...)

3.1.5 Frequency Stability/Temperature Variation.

- Part §2.1055, §27.54

The frequency stability of the transmitter is measured by:

- a) **Temperature** : The temperature is varied from -30°C to + 50°C using an environmental chamber with 10°C increments.
- b) **Primary Supply Voltage** : The primary supply voltage is varied from 85% to 115% of the nominal voltage at the input to the device or at the power supply terminals if cables are not normally supplied.

Specification – The frequency stability shall be sufficient to ensure that the fundamental emissions stay within the authorized bands of operation.

Time Period and Procedure:

1. The carrier frequency of the transmitter is measured at room temperature. (20°C to provide a reference).
2. The equipment is turned on in a “standby” condition for one minute before applying power to the transmitter. Measurement of the carrier frequency of the transmitter is made within one minute after applying power to the transmitter.
3. Frequency measurements are made at 10°C intervals ranging from -30°C to +50°C. A period of at least one half-hour is provided to allow stabilization of the equipment at each temperature level.

3.2 SUMMARY OF TESTS

FCC Part Section(s)	Parameter	Limit	Test Condition	Status (note 1)
I. Transmitter Test Items				
2.1049 27.53(m)(6)	Occupied Bandwidth	N/A	Conducted	C
2.1051 27.53(m)(2)(V),(6)	Band Edge	$< 43 + 10\log_{10}(P)$		C
2.1051 27.53(m)(2)(V),(6)	Conducted Spurious Emissions	$< 43 + 10\log_{10}(P)$		C
2.1046 27.50(h)(2)	Transmitter Output Power	< 2 Watts max.		C
2.1055 27.54	Frequency Stability	Fundamental emissions must stay within the authorized bands of operation.		C
2.1051 27.53(m)(2)(V),(6)	Radiated Spurious Emissions	$< 43 + 10\log_{10}(P)$ for all out-of-band emissions	Radiated	C
II. Additional Test Results for JBP portion				
15.107	AC Conducted Emissions	$< \text{FCC 15.107 limits}$	Radiated	C ^{note 2}
15.109	General Field Strength Limits	$< \text{FCC 15.109 limits}$	Line Conducted	C ^{note 2}
Note 1: C=Comply NC=Not Comply NT=Not Tested NA=Not Applicable Note 2: The JBP (Computing device peripheral) portion of this device was tested and approved by FCC DOC Procedure.

7.1 EMISSION DESIGNATOR

A. Emission Designator

- Bandwidth: 10MHz

QPSK Modulation

Emission Designator = 9M14G7D

WiMAX BW = 9.1373 MHz

G = Phase Modulation

7 = Quantized/Digital Information

D = Data Transmission

16QAM Modulation

Emission Designator = 9M13W7D

WiMAX BW = 9.1336 MHz

W = Composite – Quadrature Amplitude Modulation

7 = Quantized/Digital Information

D = Data Transmission

8.1 CONCLUSION

The data collected shows that the **EpiValley Co., Ltd.** WiMAX Mobile Hostpot Router (**FCC ID: R2NSWR-8225**) complies with all the requirements of Parts 2 and 27 of the FCC rules.
