In re: Application for certification of a Medical Implant Transmitter  
FCC ID:XXX CS-A-000051

Gentlemen:

Submitted herewith on behalf of CardioMEMS Incorporated, 75 5<sup>th</sup> Street, NW, Room 205, Atlanta, Georgia 30308, is an application for an implant to be used to measure the vascular blood pressure of implanted patients. Certification is requested under the provisions of Part 15.209 of the FCC Rules and Regulations. This application contains a separate request for post grant confidential treatment of certain portions of the application material as identified in that letter.

A grantee code will be requested at the time of filing and will replace the XXX portion of the FCC ID as it is referenced in various documents associated with this filing.

Due to the extremely low radiated field strength, RF exposure information is not required.

Pursuant to Section 15.19(a)(5), the FCC ID number associated with the transmitter and the information required by Section 2.925 of the FCC Rules will be placed in the instruction manual for the transmitter in lieu of being placed directly on the transmitter. The application contains a separate attachment showing the format of the information to be placed in the manual.

Sincerely,

Phillip Inglis  
Consultant to CardioMEMS
