To Whom It May Concern:

Hamlet, Inc. has reviewed the guidance in FCC KDB 784748 regarding labeling and specifically with regard to the placement of the compliance statement in Section 15.19(a). We find the available space for the label too small to fit the statement and therefore have placed it in the user manual.

With the design of this product the only flat surface is on the base, where the label is being placed. All the other surfaces are curved. The design team has had historic problems with labels coming off of curved surfaces. These engineers advise us that they cannot find a label that will be permanent on a curved surface. They can only provide a label that will truly be permanent on a flat surface. The space where a label will remain permanently on the product is therefore limited to the flat surface on the base. This surface is small, leading to the decision to put the compliance statement in the user manual.

Sincerely,

A handwritten signature in black ink that reads "Stephen Berger". The signature is written in a cursive style with a large initial "S".
