No. 1118077-3 ed. 2

RF performance

EQUIPMENT UNDER TEST

Equipment : Pico node B
Type / model : N4/US80-R4L24-TE1/Q8
Manufacturer : Celestica Inc. & CommScope Inc.
Tested by request of : Andrew AB

SUMMARY

All selected test cases specified in this report complies with the requirements according to the following standards:

47CFR part 2 (2011)
47CFR part 27 (2011)
47CFR part 15B (2011), Class B

Test methods according to ANSI C63.4-2009

Date of issue: January 12, 2012

Tested by:

Stefan Andersson

Sweden

Name of contact: Anders Norberg

2 EQUIPMENT UNDER TEST (EUT)

2.1 Identification of the EUT according to the manufacturer/client declaration

Equipment:	Pico node B
Type/Model:	N4/US80-R4L24-TE1/Q8
Brand name:	OneBase
Serial number:	XM104720002
Manufacturer:	Celestica Inc. & CommScope Inc.
Transmitter frequency range:	2110 – 2155 MHz
Receiver frequency range:	1710 – 1755 MHz
Antenna ports:	Port A: Tx/Rx Port B: Rx
Rating RF output power (RMS):	Single carrier: 24 dBm (250 mW) Multi carrier: N/A
Type of modulation:	QPSK, 16QAM and 64QAM
Nominal power voltage:	120 V AC

2.2 Additional hardware information about the EUT

The EUT consists of the following units:

Unit	Serial number
Pico node B	XM104720002

2.3 Test signals

The EUT was transmitting at maximum power with test models according to 3GPP TS 25.141.

For each test the worst case test model was determined.

The worst case was test model 1 (QPSK modulation) for all tests.

2.4 Modification during the tests

No modifications have been made during the tests.

3 TEST SPECIFICATIONS

3.1 Standards

47CFR part 2 (2011)
47CFR part 27 (2011)
47CFR part 15B (2011), Class B

Test methods according to ANSI C63.4-2009

3.2 Additions, deviations and exclusions from standards

No additions, deviations or exclusions have been made from standards.

3.3 Test site

Measurements were performed at:

Intertek Semko AB.
Torshamnsgatan 43,
P.O. Box 1103
SE-164 22 Kista

Intertek Semko AB is a FCC listed test site with site registration number 90913
Intertek Semko AB is a Industry Canada listed test facility with IC assigned code 2042G

Measurement chambers

Measurement Chamber	Type of chamber
STORA HALLEN a.k.a. BIG CHAMBER	Semi-anechoic 10m and 3m

3.4 Test conditions

If not additionally specified, the tests were performed under the following environmental conditions:

Parameter	Normal	Extreme
Supplying voltage, V	120 V AC, 60 Hz	102 – 138 V AC, 60 Hz
Air temperature, °C	20 °C	-30 °C to 50 °C

4 TEST SUMMARY

The results in this report apply only to the tested sample:

5.2 Test setup details

The mains terminal disturbance voltage was measured with the EUT located 0,8 m above the ground plane and 0,4 m from the vertical ground plane. The EUT was connected to an artificial mains network (AMN). The AMN was placed on the ground plane. Amplitude measurements were performed with a quasi-peak and average detector. The EUT was supplied by 120 VAC (60 Hz) during the test.

960 –	54.0	3

6.2 Test setup details

The radiated disturbance electric field intensity was measured in a semi-anechoic chamber at a distance of 3 m and the EUT was placed on a non-metallic stand, 0,8 m above the reference ground plane. In TX mode the EUT was transmitting with test model 1. Test set-up photos are given below.

An overview sweep with peak detection of the electric field intensity was performed with the measurement receiver in max-hold and with the antenna placed 1,5 m, 2,5 m and 3,5 m above the floor. The polarisation was horizontal and vertical. The measurements were repeated with the EUT rotated in 45-degree steps.

At the frequencies where high disturbance levels were found a search for max disturbance level was performed. With the EUT and antenna in the worst-case configuration new measurements with quasi-peak detector were carried out.

12 BAND EDGE

Date of test:	2012-10-06	Test location:	Radio lab
EUT Serial:	XM104720002	Ambient temp.	20-25 °C
Test result:	Pass	Relative humidity	20-40 %

12.1 Requirement

Reference: FCC §24.238

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $43 + 10 \log(P)$ dB = -13 dBm

12.2 Test setup details

EUT connected to a spectrum analyzer. The spectrum analyzer was connected to an external 10 MHz reference.

Attenuations in the test setup were compensated with a level offset in the spectrum analyzer.

A resolution bandwidth of 50 kHz ($> 1\%$ of 26 dB BW) was used up to 1 MHz from the band edge.

A resolution bandwidth of 100 kHz was used 1 - 5 MHz from the band edge. The limit was decreased to -23 dBm due to the reduced resolution bandwidth.

EUT was transmitting in test mode 1.

12.3 Test data

Low band edge, test model 1

Low band edge, test model 1

High band edge, test model 1

High band edge, test model 1

13 UNCERTAINTIES SUMMARY

The measurement uncertainty describes the overall uncertainty of the given measured value during operation of the EUT.

Measurement uncertainty is calculated in accordance with EA-4/02-1997.

The measurement uncertainty is given with a confidence of 95% (k=2).

Radiated disturbance, field strength, 30 MHz - 1000 MHz
