

To whom it may concern.

Tjodalyng: 16.09.2011

This is an application of Class II Permissive Change (C2PC) of the previously approved TA-7650 (FCC ID: RA9 TA-76XX).

The following modulation types have been added:

AM 8.33kHz channel bandwidth (5K60A3E)

These changes are done by firmware change only. There is no hardware change to the product. All schematic diagrams and board layouts remain unchanged.

In addition we request that the approval is updated to cover the following variants of the radio.

TA-7650, VHF transmitter, original equipment.

TA-7604VH, VHF transmitter (Same radio as the TA-7650 but with a passive cavity filter added to the output of the transmitter to further reduce harmonics and broadband noise).

TA-7604VL, VHF transmitter (Same radio as TA-7604VH but with reduced output power to 12W).
