

AWI-926T

Wireless 802.11b/g Modem Card

Operational Description

This device is a Wireless 802.11b/g PCI Card which operates in the 2.4GHz frequency spectrum in the 802.11b/g mode with throughput of up to 54Mbps which OFDM technique will be applied. If the signal to noise ratio is too poor which could not support 54Mbps, the 11Mbps data rate with CCK, DSSS technique will be applied.

The transmitter of the EUT is powered by host equipment and connected with managing equipment through PCI. The antenna is a 1/4 Dipole Sleeve Antenna. Under normal use condition, the user has to keep at least 20cm separation distance between radiator and the body of the user.

For other detailed instructions, please refer to the user manuals.
