TO : **TIMCO**

**Subject : application for certification of a device including previously « Modular Approval » certified RF modules**

**Product : remote telemetry unit Lx**

**FCC ID : RCJLX**

Dear Sir/Madam,

We, *Lacroix Sofrel*, would like to apply for certification our remote telemetry unit – Model: Lx.

The equipment integrates a Bluetooth module already « modular approval » certified under FCC ID: QOQWT11IA.

This module is strictly identical as for the original tests. Therefore, original test report results (TRaC: 9F292SWUS11) accurately represents test results under new conditions.

The equipment also integrates a GPRS module already “modular approval” certified under FCC ID: N7NSL6087.

This module is identical as for original tests except for the antenna which is of the same type and with similar in-and-out band characteristics but with a lower gain than previously authorized. Original test report results (SGS: SHEMO10050062301) are therefore deemed satisfactory evidence of compliance under new conditions.

As both RF functions may operate simultaneously, additional tests have been realized regarding EMC and RF exposure.

If you have any queries, please do not hesitate to contact us.

Best Regards.

Igor HOUDANT, Hardware R&D manager

A handwritten signature in blue ink, appearing to read "Igor Houdant".
