## Sofrel S4X RFID Function

Each electronic board of Sofrel S4X products is equipped with a RFID function.  
The RFID component is a dual access EEPROM memory, one RF interface on 860-960MHz ISM Band, and one wired interface on I2C bus.  
The RFID component complies with UHF EPCGlobal Generation 2 standard.

The RFID function is for Sofrel internal use only, with production tracking informations.  
This function is not described and not accessible (protected with password) to customers.
