FCC PART15.407 (DSF Requirement) FCC 06-96	Compliance

Bay Area Compliance Laboratories Corp. (BACL) tested the equipment mentioned in accordance with the CFR47 §15.407 (h) Dynamic Frequency Selection (DFS) requirements. Test result indicated that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

**Note:** 1) Test results apply to the tested sample.

2) Details of test methods used have been recorded and kept on file by BACL.

3) The document may only be updated by BACL personnel, any changes will be noted in the document history section in this report.

## GENERAL INFORMATION

### Product Description for Equipment under Test (EUT)

The Ixia product, IxWLAN SED-MR+, the "EUT" as referred to in this report is a 802.11 a/b/g wireless multi client emulator (client device) which operates in 2412-2462 MHz (802.11b/g mode), 5150-5250 MHz (802.11a mode) 5250-5350 MHz(802.11 a mode) 5470-5725 MHz (802.11 a mode) and 5725-5825 MHz (802.11a mode). The EUT is programmed at the point of manufacture for client device operation only and does not have autonomous transmitting ability.

The EUT is of metallic construction and measures approximately 203 mm(L) x 330 mm(W) x 53 mm(H) and weighs approximately 2.24 kg.

*\* The test data gathered are from typical production sample, serial number: B1218 provided by the manufacturer.*

### Test Methodology

FCC CFR 47 Part2, Part15.407 (h)

FCC 06-96 Appendix "COMPLIANCE MEASUREMENT PROCEDURES FOR UNLICENSED NATIONAL INFORMATION INFRASTRUCTURE DEVICES OPERATING IN THE 5250-5350 MHz AND 5470-5725 MHz BANDS INCORPORATING DYNAMIC FREQUENCY SELECTION"

**The methods used for DFS radar generation were the NTIA matlab scripts adapted for use on BACL systems.**

## Test Facility

The Test site used by BACL Corp. to collect radiated and conducted emissions measurement data is located at it's facility in 1274 Anvilwood Avenue, Sunnyvale, California, USA.

Test site at BACL has been fully described in reports submitted to the Federal Communication Commission (FCC) and Voluntary Control Council for Interference (VCCI). The details of these reports has been found to be in compliance with the requirements of Section 2.948 of the FCC Rules on February 11 and December 10, 1997 and Article 8 of the VCCI regulations on December 25, 1997. The facility also complies with the radiated and AC line conducted test site criteria set forth in ANSI C63.4-2003.

The Federal Communications Commission and Voluntary Control Council for Interference have the reports on file and is listed under FCC registration number: 90464 and VCCI Registration No.: C-1298 and R-1234. The test site has been approved by the FCC and VCCI for public use and is listed in the FCC Public Access Link (PAL) database.

Additionally, BACL is a National Institute of Standards and Technology (NIST) accredited laboratory, under the National Voluntary Laboratory Accredited Program (**NVLAP Lab Code: 200167-0**).

The current scope of accreditations can be found at  
<http://ts.nist.gov/ts/htdocs/210/214/scopes/2001670.htm>

## APPLICABLE STANDARDS

### DFS Requirement

FCC CFR47 §15.407 (h) and FCC 06-96 Appendix.

**Table 1: Applicability of DFS requirements prior to use of a channel**

Requirement	Operational Mode		
	Master	Client (Without radar detection)	Client (With radar detection)
<i>Non-Occupancy Period</i>	Yes	Not Required	Yes
<i>DFS Detection Threshold</i>	Yes	Not Required	Yes
<i>Channel Availability Check Time</i>	Yes	Not Required	Not Required
<i>Uniform Spreading</i>	Yes	Not Required	Not Required
<i>U-NII Detection Bandwidth</i>	Yes	Not Required	Yes

**Table 2: Applicability of DFS requirements during normal operation**

Requirement	Operational Mode		
	Master	Client (Without DFS)	Client (With DFS)
<i>DFS Detection Threshold</i>	Yes	Not Required	Yes
<i>Channel Closing Transmission Time</i>	Yes	Yes	Yes
<i>Channel Move Time</i>	Yes	Yes	Yes

**Table 3: Interference Threshold values, Master or Client incorporating In-Service Monitoring**

Maximum Transmit Power	Value (See Notes 1 and 2)
$\geq 200$ milliwatt	-64 dBm
$< 200$ milliwatt	-62 dBm
<p><b>Note 1:</b> This is the level at the input of the receiver assuming a 0 dBi receive antenna.</p> <p><b>Note 2:</b> Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response.</p>	

**Table 4: DFS Response requirement values**

Parameter	Value
<i>Non-occupancy period</i>	Minimum 30 minutes
<i>Channel Availability Check Time</i>	60 seconds
<i>Channel Move Time</i>	10 seconds See Note 1.
<i>Channel Closing Transmission Time</i>	200 milliseconds + an aggregate of 60 milliseconds over remaining 10 second period. See Notes 1 and 2.
<i>U-NII Detection Bandwidth</i>	Minimum 80% of the UNII 99% transmission power bandwidth. See Note 3.
<p><b>Note 1:</b> The instant that the <i>Channel Move Time</i> and the <i>Channel Closing Transmission Time</i> begins is as follows:</p> <ul style="list-style-type: none"> <li>• For the Short Pulse Radar Test Signals this instant is the end of the <i>Burst</i>.</li> <li>• For the Frequency Hopping radar Test Signal, this instant is the end of the last radar <i>Burst</i> generated.</li> <li>• For the Long Pulse Radar Test Signal this instant is the end of the 12 second period defining the <i>Radar Waveform</i>.</li> </ul> <p><b>Note 2:</b> The <i>Channel Closing Transmission Time</i> is comprised of 200 milliseconds starting at the beginning of the <i>Channel Move Time</i> plus any additional intermittent control signals required to facilitate a <i>Channel</i> move (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.</p> <p><b>Note 3:</b> During the <i>U-NII Detection Bandwidth</i> detection test, radar type 1 is used and for each frequency step the minimum percentage of detection is 90 percent. Measurements are performed with no data traffic.</p>	

**Table 5: Short Pulse Radar Test Waveforms**

<b>Radar Type</b>	<b>Pulse Width (Microseconds)</b>	<b>PRI (Microseconds)</b>	<b>Pulses</b>	<b>Minimum Percentage of Successful Detection</b>	<b>Minimum Number of Trials</b>
1	1	1428	18	60%	30
2	1-5	150-230	23-29	60%	30
3	6-10	200-500	16-18	60%	30
4	11-20	200-500	12-16	60%	30
Aggregate (Radar Types 1-4)				80%	120

**Table 6: Long Pulse Radar Test Signal**

<b>Radar Type</b>	<b>Bursts</b>	<b>Chirp Width (MHz)</b>	<b>PRI (usec)</b>	<b>Number of Pulses per Burst</b>	<b>Number of Bursts</b>	<b>Minimum Percentage of Successful Detection</b>	<b>Minimum Number of Trials</b>
5	50-100	5-20	1000-2000	1-3	8-20	80%	30

**Table 7: Frequency Hopping Radar Test Signal**

<b>Radar Type</b>	<b>Pulse Width (usec)</b>	<b>PRI (usec)</b>	<b>Pulses per Hop</b>	<b>Hopping Rate (kHz)</b>	<b>Hopping Sequence Length (msec)</b>	<b>Minimum Percentage of Successful Detection</b>	<b>Minimum Number of Trials</b>
6	1	333	9	0.333	300	70%	30

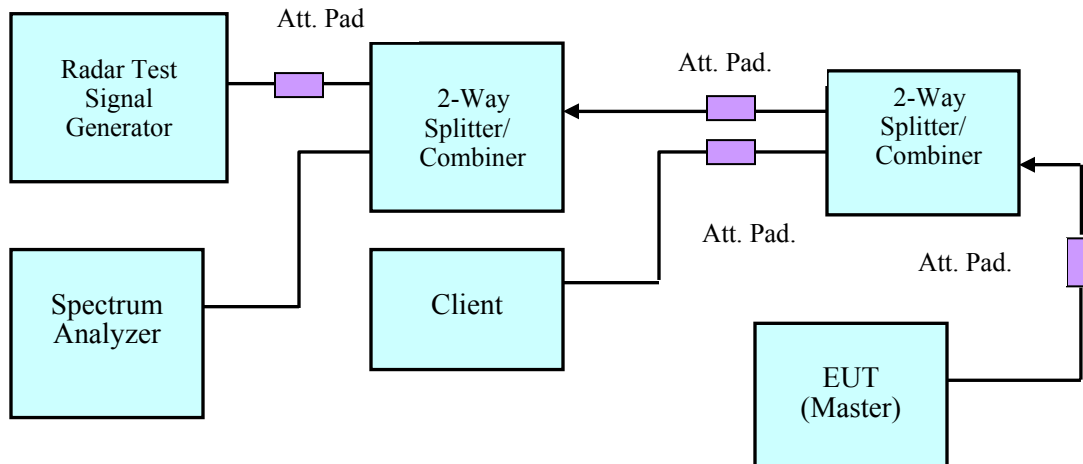

## DFS Measurement System

BACL DFS measurement system consists of two subsystems: (1) The radar signal generating subsystem and (2) the traffic monitoring subsystem.

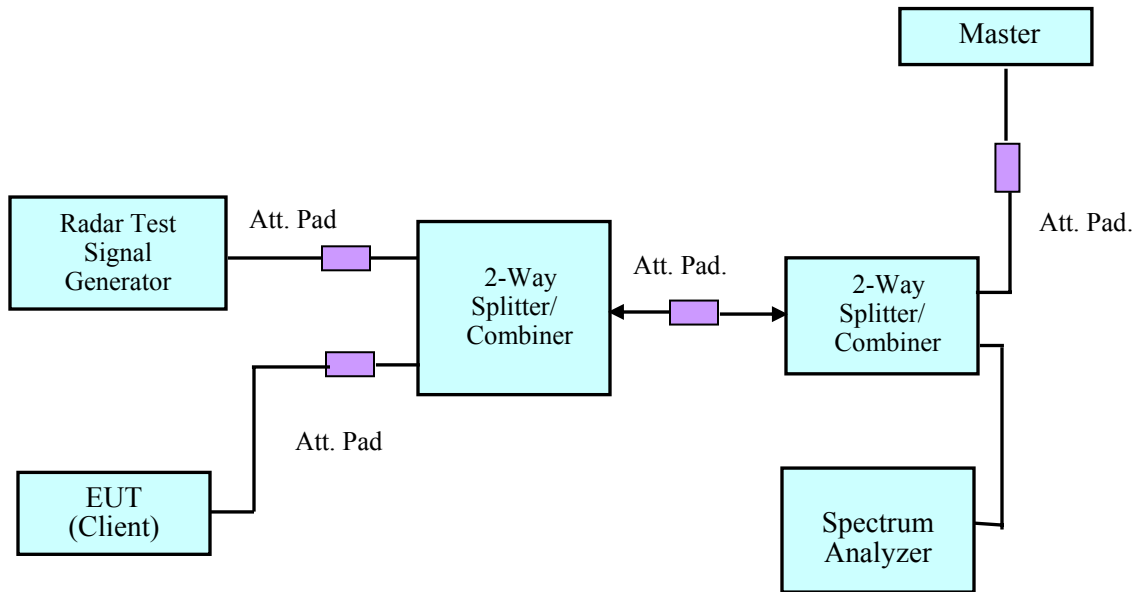

### System Block Diagram

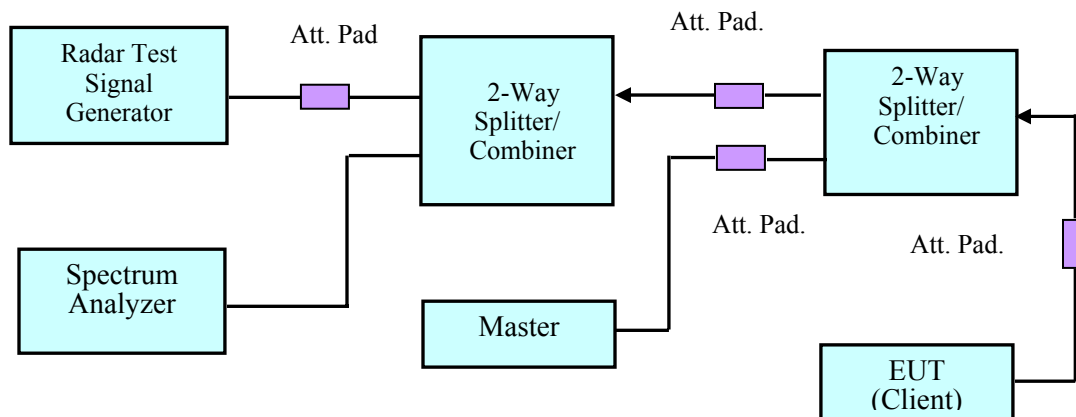

### Conducted Method

**Setup for Master with injection at the Master**

**Setup for Client with injection at the Master**

**Setup for Client with injection at the Client**

## Radiated Method

## Test Procedure

A spectrum analyzer is used as a monitor verifies that the EUT status including Channel Closing Transmission Time and Channel Move Time, and does not transmit on a Channel during the Non-Occupancy Period after the diction and Channel move. It is also used to monitor EUT transmissions during the Channel Availability Check Time.

## SUMMARY OF TEST RESULT

The following result table represents the list of measurements required under the CFR47 §47 Part15.407 (h) and FCC 06-96.

Items	Description of Test	Result
Detection Bandwidth	UNII Detection Bandwidth	NR
Performance Requirements Check	Initial Channel Availability Check Time (CAC)	NR
	Radar Burst at the Beginning of the CAC	NR
	Radar Burst at the End of the CAC	NR
In-Service Monitoring	Channel Move Time	Complies
	Channel Closing Transmission Time	Complies
	Non-Occupancy Period	NR
Radar Detection	Statistical Performance Check	NR

**Note:** N/R – Not Required.

## TEST RESULTS

### Description of EUT

The EUT operates in 5230-5350 MHz and 5470-5725 MHz range.

The EUT is a Slave device without radar detection function.

The antenna of the EUT is tri-band Omni antenna, the gain is 5 dBi (5.3 GHz) and 4.5 dBi (5.75 GHz).

The rated output power of EUT is >23 dBm (EIRP).

WLAN traffic is generated by streaming the video file TestFile.mpg, this file is used by IP and Frame based systems for loading the test channel during the In-service compliance testing of the U-NII device. The file is streamed from the Access Point to the Client in full motion video mode using the media player with the V2.61 Codec package.

The Master device supported for testing is Cisco Aironet 1130AG Series IEEE 802.11 a/b/g Access Point  
FCC ID: LDK102054E  
Model No.: AIR-AP1131AG-A-K9  
S/N: FTX1109T0X8  
Manufacturer: Cisco Systems, Inc.

## Radar Type 1

**Channel Availability Check Time (CAC)**

## Test Procedure

- 1) Measure the initial power-up time of EUT.
- 2) With link established on channel, apply a radar signal within 0~6 seconds after the initial power-up period, monitor the transmissions on channel from the spectrum analyzer.
- 3) Reboot EUT, with a link established on channel, apply a radar signal within 54~60 seconds after the initial power-up period, monitor the transmission on channel from the spectrum analyzer.

**EUT Initial power-up Cycle Time**

EUT initial Power-up cycle (Second)
/

**Results:** Not Required.

Timing of Radar Burst	Spectrum Analyzer Display
No Radar Triggered	/
Within 6 seconds of the CAC starting	/
Within the last 6 seconds of the CAC	/

## Channel Move time and channel closing transmission time

Test Procedure:

Perform one of the type1 to type 4 short pulse radar waveform, BACL use type 1 radar signal, repeat using a long pulse radar type5 waveform.

The aggregate channel closing transmission time is calculated as follows:

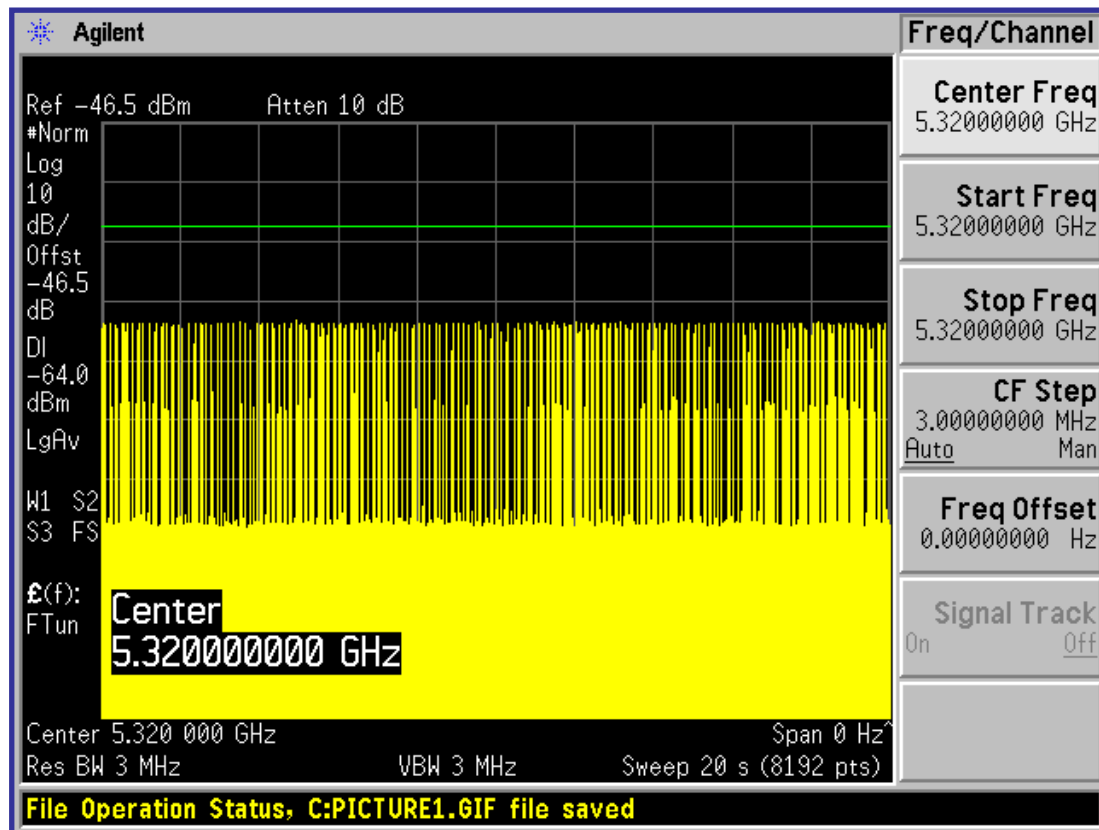

$$\text{Aggregate Transmission Time} = N * \text{Dwell Time}$$

N is the number of spectrum analyzer bins showing a device transmission

Dwell Time is the dwell time per bin (i.e. Dwell Time = S/B, S is the sweep time and B is the number of bin, i.e. 8192)

**5320 MHz**

WLAN Traffic:

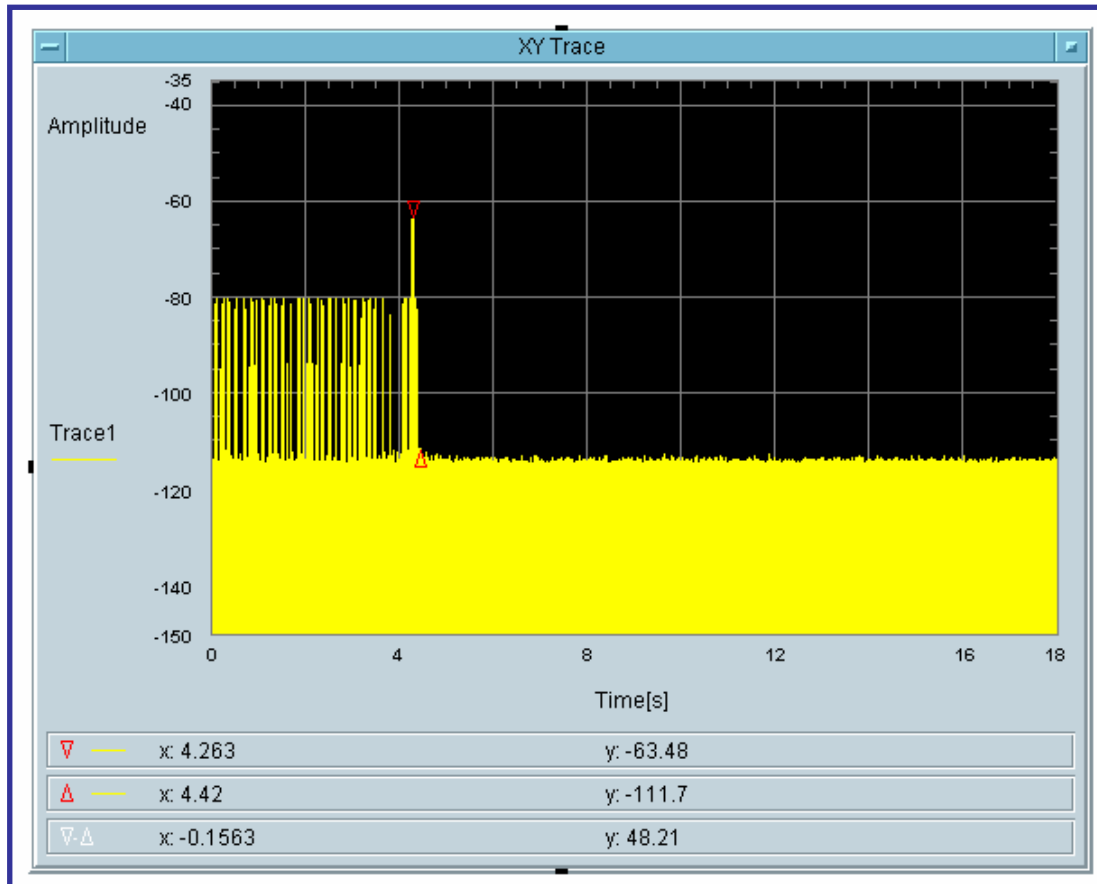

Type 1 radar channel move time result:

Channel Move Time (sec.)	Limit (sec.)
0.1416	10

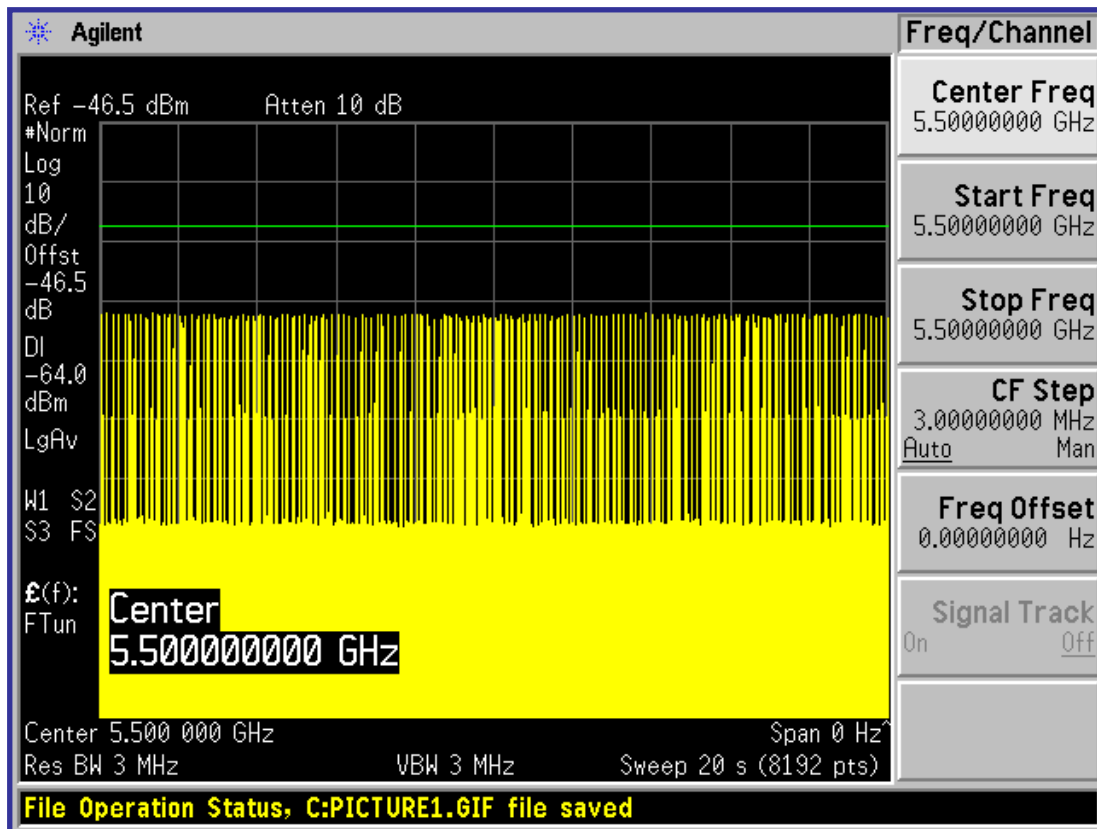

Type1 radar channel closing transmission time result:

Aggregate Transmission Time (ms)	Limit (ms)	Margin (ms)
0	60	60

Total On Time [s]  
10.99m

Total On Time After Delay [s]

**5500 MHz**WLAN Traffic:

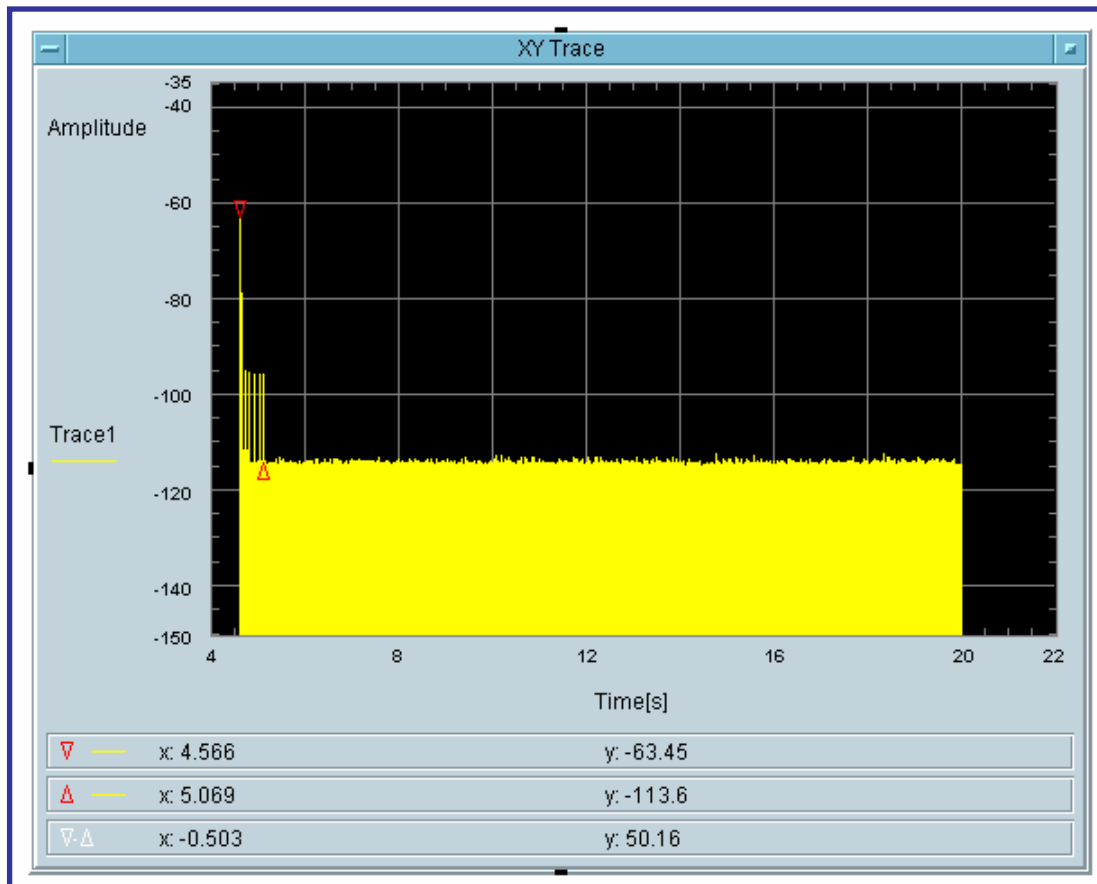

Type 1 radar channel move time result:

Channel Move Time (sec.)	Limit (sec.)
0.591	10

Type1 radar channel closing transmission time result:

Aggregate Transmission Time (ms)	Limit (ms)	Margin (ms)
0	60	60

Total On Time [s]  
14.65m

Total On Time After Delay [s]

**Non-Occupancy Period**

## Test Procedure

Measure the EUT for more than 30 minutes following the channel close/move time to verify that the EUT does not resume any transmissions on this channel. Provide one plot to demonstrate no transmission on the channel for the non-occupancy period (30 minutes observation time)

**Result:** Not Required.

## Detection Bandwidth

Procedure:

Performed with any one of the short pulse radar waveforms (type 1, 2, 3 or 4)

Start with radar generator frequency set to the center of the channel ( $F_c$ )

Perform at least 10 trials and confirm at least 90% detected

Increment radar generator frequency by 1 MHz and repeat

Perform at least 10 trials and confirm at least 90% detected

Continue incrementing the radar frequency until detection rate falls below 90%

Starting at  $F_c - 1$  MHz, repeat the process, this time decrementing the radar frequency by 1 MHz

$F_L$  is the lowest frequency at which detection was 80% or better

$F_H$  is the highest frequency at which detection was 80% or better

UNII Detection Bandwidth =  $F_H - F_L$

**Result:** Not Required.

**-Service Monitoring**

## Procedure:

Stream MPEG file from master to slave

Generate radar waveform

Record whether or not the waveform was detected

At least 30 trials are applied for each radar type

For radar types with randomized parameters, each trial uses a unique waveform

Perform with each of the radar types 1-6

Confirm that the detection rate for each radar type meets the minimum requirement

Type 1, 2, 3, 4: 60% each

Type 5: 80%

Type 6: 70%

Confirm that the mean of the rates for radar types 1 through 4 meets the requirement of 80%

$$\text{Detection Ratio} = \frac{\text{Total Waveform Detections}}{\text{Total Waveform Trails}} \times 100$$

**Result:** Not Required.
