TEST REPORT FOR

**Weather Node
Model: W1.0**

Tested to The Following Standards:

FCC Part 15 Subpart C Section(s)

**15.207 & 15.247
(FHSS 902-928 MHz)**

Report No.: 102618-7

Date of issue: September 6, 2019

Test Certificate # 803.01

This test report bears the accreditation symbol indicating that the testing performed herein meets the test and reporting requirements of ISO/IEC 17025 under the applicable scope of testing for CKC Laboratories, Inc.

We strive to create long-term, trust based relationships by providing sound, adaptive, customer first testing services. We embrace each of our customers' unique EMC challenges, not as an interruption to set processes, but rather as the reason we are in business.

This report contains a total of 123 pages and may be reproduced in full only. Partial reproduction may only be done with the written consent of CKC Laboratories, Inc.

Report Authorization

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the equipment provided by the client, tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

ISO/IEC 17025 Decision Rule

The declaration of pass or fail herein is based upon assessment to the specification(s) listed above, including where applicable, assessment of measurement uncertainties. For performance related tests, equipment was monitored for specified criteria identified in that section of testing.

Modifications During Testing

This list is a summary of the modifications made to the equipment during testing.

Summary of Conditions

Modification #1: Added Wurth Electronics PN 742 715 3 Ferrite was placed on the power wires exiting the chassis of the EUT. The ferrite was clamped around both wires with 2 turns.

Modifications listed above must be incorporated into all production units.

Conditions During Testing

This list is a summary of the conditions noted to the equipment during testing.

Summary of Conditions

This unit is a device that has two identical radios (one fitted with a band pass filter and one without). The transmitter measurements were made on both for conducted emissions and verified for radiated measurements.

Radio 1 = Radio with Band Pass Filter

Radio 2 = Radio without Band Pass Filter

Three antennas were tested.

2.5dBi Omni

6dBi Omni

11 dBi Sector

The data herein demonstrates compliance with the limits utilizing each antenna listed.

EQUIPMENT UNDER TEST (EUT)

During testing, numerous configurations may have been utilized. The configurations listed below support compliance to the standard(s) listed in the Summary of Results section.

Configuration 1

General Product Information:

Product Information	Manufacturer-Provided Details
Equipment Type:	Stand-Alone Equipment
Type of Wideband System:	FHSS
Operating Frequency Range:	902 – 928MHz
Number of Hopping Channels:	51
Modulation Type(s):	FSK
Maximum Duty Cycle:	100%
Number of TX Chains:	2* (Equipment includes two identical radios, one RF output includes additional passive filter.)
Antenna Type(s) and Gain:	2.5dBi Omni 6dBi Omni 11dBi Sector
Beamforming Type:	NA *
Antenna Connection Type:	External Connector SMA
Nominal Input Voltage:	13 VDC (max 13.5)
Firmware / Software used for Test:	Putty Serial Program Version 0001

*Note: Manufacturer declares the equipment does not support simultaneous coordinated coherent transmissions (MIMO).

Test Setup/Conditions			
Test Location:	Mariposa Lab A	Test Engineer:	Benny Lovan
Test Method:	ANSI C63.10 (2013)	Test Date(s):	7/25/19 – 7/29/19
Configuration:	1		
Test Setup:	The EUT was placed on a non-conductive table. The antenna port for Radio 2 was connected directly to the spectrum analyzer through 10dB of attenuation. Then, the measurement cable was connected to antenna Port 1 for Radio 1 and the measurements were repeated. Radio 1 = Radio with Band Pass Filter Radio 2 = Radio without Band Pass Filter The EUT has a number of rate settings. The highest rating that the customer will use is Rate 6. The 20dB Bandwidth measurement was taken for each rate and they are defined below.

15.247(a)(1)(iii) Time of Occupancy

Test Data Summary				
Observation Period, P_{obs} is derived from the following:				
$P_{obs} = \begin{cases} 20 \text{ Seconds} & 20 \text{ dB BW} < 250\text{kHz} \\ 10 \text{ Seconds} & 20 \text{ dB BW} \geq 250\text{kHz} \end{cases}$				
Antenna Port	Operational Mode	Measured (ms)	Limit (ms/ P_{obs})	Results
1*	Hopping	386.4	≤ 400	Pass

*Note: Both antenna ports tested; worst case results reported.

Measured results are calculated as follows:

$$Dwell\ time = \left(\sum_{Bursts} RF\ Burst\ On\ Time + \sum_{Control} Control\ Signal\ On\ time \right) \Big|_{P_{obs}}$$

Actual Calculated Values:

Parameter	Value
Observation Period (P_{obs}):	20 s**
Number of RF Bursts / P_{obs} :	1
On time of RF Burst:	386.4mS
Number of Control or other signals / P_{obs} :	0
On time of Control or other Signals:	0
Total Measured On Time:	386.4 mS

**Note: The plots below utilize a 30 second span to demonstrate the silent period between successive RF bursts is greater than 20 seconds. Therefore, only one RF burst occurs in any 20 second period.

The manufacturer declares the maximum number of RF bursts on a single channel in any 20 second period is 1.

The manufacturer declares the RF bursts are constant power; intermediate RF bursts on the plot <30dBc are from adjacent channels.
