

Remote Information in Real-time

October 21, 2003

This letter attests that the modifications made to the Luna iMonitoring TLM during testing at Rheintech laboratory to comply with FCC Part 15 have been incorporated into the production schematics for each of the monitor units (*i*EFM, *i*TLM-1 and *W*PM-T) covered by FCC ID: RIM-MON. The modifications, as shown in the attached schematics, will be implemented in all production units, and each production unit will have an attached label with the above FCC ID.

The first modification was made to comply with the FCC Part 15 spurious emissions requirements. The modifications appear on "RF Pwr Amp" page on each schematic. The modification consists of the addition of a low pass filter following the transmit/receive output switch and prior to the antenna connection. The filter consists of C240-244 and L208. The attached .pdf schematics have a "note" attached beside the filter that also describes the filter components.

The second modification was made to comply with the FCC Part 15 receiver LO leakage. The modifications appear on "Radio" page on each schematic. Capacitors C211 and C213 were removed as they were coupling the LO to the supply rail.
