RE: NEC System Integration & Construction

FCC ID: RJGHX68C

The new revisions to this filing are substantially better than the first. However, I still have a few comments on this Application.

- 1.) Please provide Tune Up procedure for this device.
- 2.) Please provide updated Confidentiality Agreement. Do you really want to have the Parts List and Tune Up procedure available to the public at the FCC website?
- 3.) For Section 9, "Field Strength of Spurious Emissions", the FCC accepted methodology for measuring transmitter radiated spurious is to use the substitution method described in TIA/EIA 603. Please review this document and provide revised information.
- 4.) Please provide RF Exposure Information using the antennas selected for this product.
- 5.) Please provide an installation manual or installation instructions for this product.
- 6.) Please provide information required under 2.1033(c)(6), (7) and (8).
- 7.) Please confirm that no digital intelligence or digital data will be transmitted by this device.

William H. Graff  
President and Examining Engineer

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
