

#### APPENDIX A: RF EXPOSURE CALCULATIONS FOR HIGH GAIN ANTENNAS

From FCC 1.1310 table 1A, the maximum permissible RF exposure for an uncontrolled environment is  $1\text{mW}/\text{cm}^2$ . The Electric field generated for a  $1\text{mW}/\text{cm}^2$  exposure (S) is calculated as follows:

$$S = E^2/Z$$

where:

S = Power density

E = Electric field

Z = Impedance.

$$E = \sqrt{S \times Z}$$

$$1\text{mW}/\text{cm}^2 = 10\text{ W}/\text{m}^2$$

The impedance of free space is 337 ohms, where E and H fields are perpendicular.

Thus:

$$E = \sqrt{10 \times 337} = 61.4\text{ V}/\text{m} \text{ which is equivalent to } 1\text{mW}/\text{cm}^2$$

Using the relationship between Electric field E, Power in watts P, and distance in meters d, the corresponding Antenna numeric gain G and the transmitter output power and solving for d,

$$d = \sqrt{\frac{P_{\text{eak}} \times 30 \times G}{E}}$$

#### Example using the Stub Omni-directional antenna

1. The Numeric gain G of antenna with a gain specified in dB is determined by:

$$G = \text{Log}^{-1}(\text{dB gain}/10)$$

$$G = \text{Log}^{-1} 0.22 = 1.66$$

**The table below identifies the distances where the  $1\text{mW}/\text{cm}^2$  exposure limits may be exceeded during continuous transmission using the external antenna**

TABLE 24: CISCO DIPOLE ANTENNA

| Antenna Type | Gain (dBi) | Gain Numeric | Peak output EIRP Power (mW) | Calculated RF Exposure Separation Distance (cm) | Minimum RF Exposure Separation Distance (cm) |
|--------------|------------|--------------|-----------------------------|-------------------------------------------------|----------------------------------------------|
| External     | 2.2        | 1.66         | 177.8                       | 4.8                                             | 20                                           |

TABLE 25: DELL DIPOLE ANTENNA

| Antenna Type | Gain (dBi) | Gain Numeric | Peak output EIRP Power (mW) | Calculated RF Exposure Separation Distance (cm) | Minimum RF Exposure Separation Distance (cm) |
|--------------|------------|--------------|-----------------------------|-------------------------------------------------|----------------------------------------------|
| External     | -5.6       | 0.27         | 30.0                        | 1.5                                             | 20                                           |

TABLE 26: DELL INVERTED F ANTENNA

| Antenna Type | Gain (dBi) | Gain Numeric | Peak output EIRP Power (mW) | Calculated RF Exposure Separation Distance (cm) | Minimum RF Exposure Separation Distance (cm) |
|--------------|------------|--------------|-----------------------------|-------------------------------------------------|----------------------------------------------|
| External     | -5.6       | 0.27         | 30.0                        | 1.5                                             | 20                                           |

TABLE 27: TOSHIBA CHIP ANTENNA

| Antenna Type | Gain (dBi) | Gain Numeric | Peak output EIRP Power (mW) | Calculated RF Exposure Separation Distance (cm) | Minimum RF Exposure Separation Distance (cm) |
|--------------|------------|--------------|-----------------------------|-------------------------------------------------|----------------------------------------------|
| External     | 2.1        | 1.6          | 176.8                       | 3.7                                             | 20                                           |

TABLE 28: TOSHIBA INVERTED F ANTENNA

| Antenna Type | Gain (dBi) | Gain Numeric | Peak output EIRP Power (mW) | Calculated RF Exposure Separation Distance (cm) | Minimum RF Exposure Separation Distance (cm) |
|--------------|------------|--------------|-----------------------------|-------------------------------------------------|----------------------------------------------|
| External     | 1.0        | 1.25         | 137.2                       | 3.6                                             | 20                                           |
