RE: vARC Systems Inc.

FCC ID: ROE1WTX-2470

I have a few comments on this Application.

- 1.) The Schematics show several components (coils, potentiometers and capacitors) which are adjustable – even if only during factory assembly. Therefore it is reasonable to assume a Tune Up or adjustment procedure exists. Please provide requested exhibit.
- 2.) Please review the necessary bandwidth calculations. Please provide measurement data showing D = .25.
- 3.) Additional installation instructions and RF Exposure user warnings are required within the Manual. Please review.
- 4.) The final page of the Operational Description seems to indicate that this device may be capable of operation above 650mW. Please note that +30dBm is equal to 1 watt. Is it possible for the RF Pout to be set to a value between 0.65 and 1 watt?

William H. Graff
President and Examining Engineer
