6731 Whittier Ave, McLean, VA 22101

December 16, 2003

RE: vARC Systems Inc.

FCC ID: ROE1WTX-2470

I have a few comments on this Application.

- 1.) Please provide a Tune Up procedure for this device.
- 2.) Please provide a conformation that only the single frequency of 2470 is requested for this transmitter. External photographs seem to indicate that four channels are available.
- 3.) Please note that F3E is reserved for FM telephony only. This device transmits both FM voice and video. Please correct requested emission designator.
- 4.) The Circuit Description appears to indicate that this device is for use in the Part 18 ISM band. Please correct this document.
- 5.) The rationale in 14.2 of the Test Report is incorrect. Please review.
- 6.) Please help me identify where in the instructions that NTSC audio and video pre-emphasis is required by the Applicant for proper operation.
- 7.) Please the necessary bandwidth calculations. Please indicate how "D = .25MHz" was determined without any test data to support this conclusion.
- 8.) Please indicate how the forward and reflected power was accounted for during the substitution method of transmitter spurious emission testing.
- 9.) Additional installation instructions and RF Exposure user warnings are required within the Manual. Please review.
- 10.) The Operational Description seems to indicate that this device may be capable of operation above the ~646 mW indicated on Form 731. Please review and comment.

William H. Graff
