RF EXPOSURE

* The maximum power for portable devices is $60/f(\text{GHz})$ mW.
(KDB 447498 D01 Mobile Portable RF Exposure v04, 11/13/2009)

This device operates at 57 mW.
(Worst case, $f=902.75\text{MHz}$ / 17.56dBm)

At 902.75 MHz, $[60/F(\text{GHz})] \Rightarrow$ that would be 66.46 mW.

Conclusion : The SAR Test is not required.
