ILAC / A2LA

Compliance Testing, LLC, has been accredited in accordance with the recognized International Standard ISO/IEC 17025:2005. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer joint ISO-ILAC-IAF Communiqué dated January 2009).

The tests results contained within this test report all fall within our scope of accreditation, unless noted below.

Please refer to <http://www.compliancetesting.com/labscope.html> for current scope of accreditation.

Testing Certificate Number: **2152.01**

FCC Site Reg, #349717

IC Site Reg. #2044A-2

Test and Measurement Data

Subpart

2.1033(c)(14):

All tests and measurement data shown were performed in accordance with FCC Rules and Regulations, Part 2, Subpart J and the following individual Parts: 20.21 in conjunction with latest version of KDB 935210.

Standard Test Conditions and Engineering Practices

Except as noted herein, the following conditions and procedures were observed during the testing:

In accordance with ANSI/C63.4-2009, and unless otherwise indicated in the specific measurement results, the ambient temperature of the actual EUT was maintained within the range of 10° to 40°C (50° to 104°F), unless the particular equipment requirements specify testing over a different temperature range. Also, unless otherwise indicated, the humidity levels were in the range of 10% to 90% relative humidity.

Environmental Conditions		
Temp (°C)	Humidity (%)	Pressure (mbar)
15.8 – 20.6	29.3 – 36.8	969.6 – 981.2

Measurement results, unless otherwise noted, are worst-case measurements.

EUT Description

Model: TriFlex-V

Description: 3-Band Cellphone Signal Booster

Firmware: N/A

Software: Revision 2.0

Additional Information:

The EUT is an **In Building** bi-directional amplifier for the boosting of cellular phone signals and data communication devices.

Frequency Band (MHz)			
Uplink	776 - 787	824 - 849	1850 - 1910
Downlink	746 - 757	869 - 894	1930 - 1990
Modulation Type	LTE	GSM, CDMA, EDGE, HSPA, EVDO, LTE	CDMA, HSPA, LTE, EDGE, EVDO

Emission Designators					
CDMA	HSPA	LTE	EVDO	EDGE	GSM
F9W	F9W	G7D	F9W	G7W	GXW

The modulation types and emission designators listed in the tables represent the modulations that the cell phone providers use for each frequency band. GSM, CDMA, and WCDMA represent all the modulation types (phase and amplitude or a combination thereof) utilized within the industry. EDGE, HSPA, LTE etc. are all protocols or multiplexing techniques using the base modulations.

EUT Operation during Tests

The EUT was in a normal operating condition.

Authorized Frequency Band

Name of Test:

Authorized Frequency Band

Engineer: Greg Corbin

Test Equipment Utilized:

i00424, SMU 200A - S/N:101369

Test Date: 12/6/13

Test Procedure

The EUT was connected to a spectrum analyzer through an attenuator with the losses being input into the spectrum analyzer as a combination of reference level offset and correction factor as needed to ensure accurate readings. A signal generator was utilized to produce a CW input signal tuned to the center channel of the operational band. The RF input level was increased to a point just prior to the AGC being in control of the power. The Signal generator was set to sweep across 2X the operational band of the EUT while the spectrum analyzer was set to MAX HOLD. Two markers were placed at the edges of the operational band and a third marker was placed at the highest point within the band no closer than 2.5 MHz from the band edge.

Test Setup

Maximum Power and Gain

Name of Test:

Maximum Power and Gain

Engineer: Greg Corbin

Test Equipment Utilized:

i00424, SMU 200A - S/N:101369

Test Date: 12/6/2013

Test Procedure

The EUT was connected to a spectrum analyzer through an attenuator with the losses being input into the spectrum analyzer as a combination of reference level offset and correction factor as needed to ensure accurate readings. The spectrum analyzer and signal generator were tuned to the frequency with the highest power level in the band, as determined by the Authorized Frequency Band test. The RF input level was increased to a point just prior to the AGC being in control of the power for both pulsed single time slot GSM modulation and 4.1 MHz AWGN modulation. The maximum power was measured and verified to meet the minimum and maximum levels allowed, with the maximum gain being computed from these values. The uplink and downlink gain under each condition were verified to be within 9 dB of each other.

The following formula was used for calculating the gain limits.

$$\text{Gain Limit (dB)} = 6.5 \text{ dB} + 20\text{Log}(F_{\text{MHz}})$$

F_{MHz} is the uplink mid-band frequency with the downlink gain limit being equivalent to the paired Uplink band gain limit.

Test Setup

Uplink Power Test Results

Frequency Band (MHz)	Input Level (dBm)	Output Power (dBm)	Lower Limit (dBm)	Upper Limit (dBm)	Result
776 - 787 MHz Pulsed GSM	-39.3	21.3	17	30	Pass
776 - 787 MHz AWGN	-42.2	18.5	17	30	Pass

Intermodulation

Name of Test: Intermodulation
Test Equipment Utilized: i00424, SMU 200A - S/N:101369

Engineer: Greg Corbin
Test Date: 12/11/13

Test Procedure

The EUT was connected to a spectrum analyzer through an attenuator. Two signal generators were utilized to produce two CW signals 600 kHz apart and centered in the operational band. Attenuator and cable insertion loss correction factors were input to either the signal generator or the spectrum analyzer as required to ensure that accurate measurements were recorded. The input power was set at the maximum allowable power and the RMS intermodulation products were measured to ensure they were less than -19 dBm in a 3 kHz RBW. The uplink and downlink intermodulation products were plotted, with the levels being listed in the summary tables.

Test Setup

Uplink Test Results

Frequency Band (MHz)	Intermodulation Level (dBm)	Limit (dBm)	Result
776 - 787 MHz	-28.7	-19	Pass
824 - 849 MHz	-27.2	-19	Pass
1850 - 1910 MHz	-32.1	-19	Pass

Downlink Test Results

Frequency Band (MHz)	Intermodulation Level (dBm)	Limit (dBm)	Result
746 - 757 MHz	-56.2	-19	Pass

Out-of-Band Emissions

Name of Test:

Out-of-Band Emissions

Engineer: Greg Corbin

Test Equipment Utilized:

i00424, SMU 200A - S/N:101369

Test Date: 12/11/13

Test Procedure

The EUT was connected to a spectrum analyzer through an attenuator with the losses being input into the spectrum analyzer as a combination of reference level offset and correction factor in order to ensure accurate readings. A signal generator was utilized to produce the following signals: GSM, CDMA, and WCDMA. The signal generator was tuned to the lowest allowable upper and lower channel within the EUT operational band for each respective modulation type. The RF input level was increased to a point just prior to the AGC being in control of the power. For each modulation type the Out of Band Emissions were measured to ensure they met the limits.

The following formula was used for calculating the limits:

$$\text{Limit} = P1 - 6 - (43 + 10\log(P2)) = -19\text{dBm}$$

P1 = power in dBm

P2 = power in Watts

Test Setup

GSM Uplink Test Results

Frequency Band (MHz)	Band Edge	Measured Level (dBm)	Limit (dBm)	Result

Conducted Spurious Emissions

Name of Test: Conducted Spurious Emissions
Test Equipment Utilized: i00424, SMU 200A - S/N:101369

Engineer: Greg Corbin
Test Date: 12/11/2013

Test Procedure

The EUT was connected to a spectrum analyzer through an attenuator, with the losses being input into the spectrum analyzer as a combination of reference level offset and correction factor as needed to ensure accurate readings. A signal generator was utilized to produce a 4.1 MHz AWGN signal operating at the maximum allowable power. The conducted spurious emissions from 9 kHz to 10 times the highest tunable frequency for each operational band were measured (excluding the band defined by the Out of band emissions test). The emissions were plotted and the highest level was recorded in the summary table.

The following formulas are used for calculating the limits.

Conducted Spurious Emissions Limit = $P1 - (43 + 10\log(P2)) = -13 \text{ dBm}$

P1 = power in dBm

P2 = power in Watts

Test Setup

Uplink Test Results

Frequency Band (MHz)	Measured Frequency (MHz)	Measured Level (dBm)	Limit (dBm)	Result
776 - 787	775.9	-24	-13	Pass
824 - 849	1864.21	-36.8	-13	Pass
1850 - 1910	3760.97	-33.6	-13	Pass

Downlink Test Results

Frequency Band (MHz)	Measured Frequency (MHz)	Measured Level (dBm)	Limit (dBm)	Result
746 - 757	1957.873	-38.4	-13	Pass
869 - 894	1952.9175	-36	-13	Pass
1930 - 1990	754.244	-40	-13	Pass

For the 746 – 758 downlink and 776 – 788 Uplink bands of operation, the following additional spurious emissions requirements apply.

FCC 27.53(c)

For operations in the 746-758 MHz band and the 776-788 MHz band, the power of any emission outside the licensee's frequency band(s) of operation shall be attenuated below the transmitter power (P) within the licensed band(s) of operation, measured in watts, in accordance with the following:

(3)On all frequencies between 763-775 MHz and 793-805 MHz, by a factor not less than $76 + 10 \log (P)$ dB in a 6.25 kHz band segment, for base and fixed stations;

The test is performed using a 10 kHz RBW. Since the limit is referenced to a 6.25 kHz BW, the following correction factor is applied to the measured data.

BW correction Factor = $10\log B1/B2$

BW correction Factor = $10\log 6.25 / 10 = -2.0$ dB

Final Value (dBm) = conducted measurement +BW correction factor

777 – 787 MHz Uplink Band

Spurious Frequency Range (MHz)	Measured Frequency (MHz)	Measured Value (dB)	Bandwidth Correction Factor (dB)	Final Value (dBm)	Limit (dBm)	Margin (dB)
763 – 775	775	-53.1	-2.0	-55.14	-46	-9.14
793 – 805	793.258	-64.9	-2.0	-66.94	-46	-20.94

746 - 756 MHz Downlink Band

Spurious Frequency Range (MHz)	Measured Frequency (MHz)	Measured Value (dB)	Bandwidth Correction Factor (dB)	Final Value (dBm)	Limit (dBm)	Margin (dB)
763 – 775	765.199	-76.2	-2.0	-78.2	-46	-32.2
793 – 805	793.051	-76.0	-2.0	-78.0	-46	-32.0

FCC 27.53(e)

For operations in the 746-763 MHz, 775-793 MHz, and 805-806 MHz bands, emissions in the band 1559-1610 MHz shall be limited to -70 dBW/MHz equivalent isotropically radiated power (EIRP) for wideband signals, and -80 dBW EIRP for discrete emissions of less than 700 Hz bandwidth. For the purpose of equipment authorization, a transmitter shall be tested with an antenna that is representative of the type that will be used with the equipment in normal operation.

Since the limit is referenced to EIRP, the final data is computed using the Conducted Spurious Emission data and adding the BW correction factor and the final gain/loss data from the antenna kitting information supplied by the manufacturer.

For the Narrowband measurement, the test is performed using a 10 kHz RBW. Since the limit is referenced to a 700 Hz BW, the following correction factor is applied to the measured data.

BW correction Factor = $10\log B1/B2$

BW correction Factor = $10\log 700 / 10000 = -11.55 \text{ dB}$

Final Value (dBm) = conducted measurement + BW correction factor + final gain/loss from Antenna Kitting document

The Limit for (narrowband) emissions is -80dBW (-50 dBm) in 700 MHz BW.

The Limit for (wideband) emissions is -70 dBW (-40 dBm) in a 1 MHz BW

777 – 787 MHz Uplink Band

Spurious Frequency Range (MHz)	Measured Frequency (MHz)	Measured Value (dBm)	Bandwidth Correction Factor (dB)	Gain/Loss from Antenna Kitting Information (dB)	Final Value (dBm)	Limit (dBm)	Margin (dB)
1559 – 1610 (Wideband)	1584.5	-62.5	0	6.48	-56.02	-40	-16.02
1559 – 1610 (Narrowband)	1609.133	-82.5	-11.55	6.48	-87.57	-50	-37.57

Noise Limits

Name of Test: Noise Limits
Test Equipment Utilized: i00413, i00424
SMU 200A - S/N:101369

Engineer: Greg Corbin

Test Date: 12/9/2013

Test Procedure

The EUT was connected to a spectrum analyzer through an attenuator with the losses being input into the spectrum analyzer as a combination of reference level offset and correction factor as necessary to ensure that accurate readings were obtained. A series of three tests were performed: the maximum uplink and downlink noise, the variable noise for the uplink and downlink in the presence of a downlink signal, and the variable uplink noise timing. The detailed procedures from KDB 935210 D03 Wideband Consumer Signal Booster Measurement Guidance DR04-41516c were followed.

For the Uplink Noise Timing plots, the first marker (MR) is the reference marker where the Downlink signal level was increased and marker (M1) is the time it took the booster to react to the increase in the Downlink signal level per KDB 935210 D03 Wideband Consumer Signal Booster Measurement Guidance DR04-41516c.

The following formulas are used for calculating the limits. Note – Downlink noise power limit is calculated with the CF of the associated uplink band.

Noise Power = $-102.5 + \text{LOG}_{10}(\text{Band Center Frequency}) * 20$

Variable Noise = $-103 \text{ dBm/MHz-RSSI}$

Uplink Inactivity

Name of Test: Uplink Inactivity
Test Equipment Utilized: i00424

Engineer: Greg Corbin
Test Date: 12/10/2013

Test Procedure

The EUT was connected directly to a spectrum analyzer set to operate in the center of the EUT operational uplink and downlink bands. The span was set to 0 Hz with a sweep time of 330 seconds and MAX HOLD operation. The EUT was powered on and the time for the uplink to return to an inactive state was measured using the DELTA MARKER method to ensure that it was less than 300 seconds. The noise level after the return to an inactive state was less than -70 dBm/MHz.

Test Setup

Variable Gain

Name of Test: Variable Gain
Test Equipment Utilized: i00413, i00424
SMU 200A - S/N:101369

Engineer: Greg Corbin

Test Date: 12/10/2013

Test Procedure

The EUT was connected to a spectrum analyzer through an attenuator with the losses being input into the spectrum analyzer as a combination of reference level offset and correction factor in order to ensure accurate readings were obtained. The uplink gain in the presence of a downlink signal was measured for each operational uplink band using the detailed procedures from KDB 935210 D03 Wideband Consumer Signal Booster Measurement Guidance DR04-41516.

The following formula is used for calculating the limits:

Variable Gain = -34 dB - RSSI +MSCL

Test Setup

Uplink Test Results

776 - 787 MHz

RSSI (dBm)	MSCL (dB)	Gain Limit (dBm)	P(in) (dBm)	P(out) (dBm)	Gain (dB)	Margin (dB)

Occupied Bandwidth

Name of Test: Occupied Bandwidth
Test Equipment Utilized: 0103,i00334, i00379,
SMU 200A - S/N:101369

Engineer: Greg Corbin

Test Date: 12/12/2013

Test Procedure

The EUT was connected to a spectrum analyzer through an attenuator with the losses being input into the spectrum analyzer as a combination of reference level offset and correction factor as required to ensure that accurate readings were obtained. A signal generator was utilized to produce the following signals: GSM, CDMA, and WCDMA. The signal generator was tuned to the center channel of each of the EUT operational uplink and downlink bands with the RF level set at a point just prior to the AGC being in control of the power. For each modulation type, the input and output signal was measured and plotted to ensure that the signals were similar.

Oscillation Detection

Name of Test: Oscillation Detection
Test Equipment Utilized: i00411, i00413, i00424

Engineer: Greg Corbin
Test Date: 12/10/2013

Test Procedure

The EUT was connected to a spectrum analyzer set for 0 Hz operation. The EUT uplink and downlink were fed back upon each other through a selectable band pass filter and variable attenuator. The EUT uplink and downlink were tested to ensure that the presence of oscillation was detected and that the EUT output turned off within 300 mS for the Uplink and 1 second for the Downlink and remained off for 1 minute. A EUT with test software was utilized to ensure that the EUT only had a maximum of 5 attempts at restart from oscillation before permanently shutting off.

Test Setup

Uplink Detection Time Test Results

Frequency Band (MHz)	Measured Time (mS)	Limit (mS)	Result

The screenshot displays the Tektronix RSA5350A software interface. The main window shows a spectrum plot titled 'Trace1' in 'Zero Span' mode. The plot area has a black background with a white grid. Several sharp, narrow peaks are visible, with the most prominent one labeled 'M1' at -40.19 dBm. The y-axis represents power in dBm, ranging from 10.00 dBm at the top to -90.00 dBm at the bottom. The x-axis represents frequency, with a label 'Frequency: 1.88000 GHz'. The plot is set to 'Peak Normal' and 'Autoscale'. The bottom status bar indicates 'Pos: 0.000 s' and 'Sweep: 500.0 s'. The top menu bar includes 'File', 'View', 'Run', 'Replay', 'Markers', 'Setup', 'Tools', 'Window', and 'Help'. The top toolbar contains icons for various functions, including 'Frequency', 'RefLev', 'Trace', 'Replay', and 'Run'.

The screenshot shows the Tek RSA5075A software interface. The main window displays a spectral plot titled 'Trace1' with 'Show' and 'Peak Normal' options. The plot shows a sharp peak at 751.50 MHz. The y-axis is labeled 'dBm' and ranges from -90.00 to 10.00. The x-axis is labeled 'Frequency' and ranges from 750.00 to 753.00 MHz. The peak is labeled 'M1' and has a value of -51.24 dBm. The noise floor is labeled 'M2' and has a value of -11.74 dBm. The plot is titled 'Trace1' and shows 'Peak Normal'. The interface includes a menu bar (File, View, Run, Replay, Markers, Setup, Tools, Window, Help) and a toolbar with icons for various functions. The status bar at the bottom shows 'Pos: 0.000 s' and 'Sweep: 1.000 s'.

Radiated Spurious

Name of Test: Radiated Spurious
Test Equipment Utilized: i00103,i00334, i00379,
SMU 200A - S/N:101369

Engineer: Greg Corbin

Test Date: 12/13/2013

Test Procedure

The EUT was tested in a semi-anechoic chamber with the turntable set 3m from the receiving antenna. A spectrum analyzer was used to verify that the EUT met the requirements for Radiated Emissions. The EUT was tested by rotating it 360 degrees with the antenna in both the vertical and horizontal orientation while raised from 1 to 4 meters to ensure that the signal levels were maximized. All cable and antenna correction factors were input into the spectrum analyzer ensuring an accurate measurement in ERP/EIRP with the resultant power in dBm. A signal generator was used to provide a CW signal centered in each operational uplink and downlink band. The EUT output was terminated into a 50 Ohm non-radiating load.

The following formula was used for calculating the limits:

Radiated Spurious Emissions Limit = $P1 - (43 + 10\log(P2)) = -13\text{dBm}$

P1 = power in dBm

P2 = power in Watts

Test Setup

Uplink Test Results

776 - 787 MHz Band 781.5 MHz Tuned Frequency

Measured Frequency (MHz)	Measured Level (dBm)	Limit (dBm)	Result
