

FCC REPORT

Applicant: Shenzhen Tianjian Telecom Technology Co., Ltd

Address of Applicant: 22J Room, D Building Huaqiang Square, Huaqiang Road,
Shenzhen, Guangdong, China

Equipment Under Test (EUT)

Product Name: Wireless Router

Model No.: RT9E, RT6E, RT8E, RT9E, RT6W, RT8W, RT9W, RK5, RK6,
RK8, RK9, RA6, RA8, RA9, WM85, WM86, WM88, WM89

FCC ID: RSZ-RT9E

Applicable standards: FCC CFR Title 47 Part 2: 2012
FCC CFR Title 47 Part22 Subpart H: 2012
FCC CFR Title 47 Part24 Subpart E: 2012

Date of sample receipt: January 22, 2013

Date of Test: January 23-31, 2013

Date of report issued: February 04, 2013

Test Result : Pass *

* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

Robinson Lo
Laboratory Manager

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product and does not permit the use of the GTS product certification mark. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of GTS International Electrical Approvals or testing done by GTS International Electrical Approvals in connection with, distribution or use of the product described in this report must be approved by GTS International Electrical Approvals in writing.

This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only."

5 General Information

5.1 Client Information

Applicant:	Shenzhen Tianjian Telecom Technology Co., Ltd
Address of Applicant:	22J Room, D Building Huaqiang Square, Huaqiang Road, Shenzhen, Guangdong, China
Manufacturer:	Shenzhen Tianjian Telecom Technology Co., Ltd
Address of Manufacturer:	22J Room, D Building Huaqiang Square, Huaqiang Road, Shenzhen, Guangdong, China

5.2 General Description of EUT

Product Name:	Wireless Router
Model No.:	RT9E, RT6E, RT8E, RT9E, RT6W, RT8W, RT9W, RK5, RK6, RK8, RK9, RA6, RA8, RA9, WM85, WM86, WM88, WM89
Operation Frequency: (Transmit)	CDMA2000 BC0: 824.70MHz ~ 848.31MHz CDMA2000 BC1: 1851.25MHz ~ 1908.75MHz
Operation Frequency: (Receive)	CDMA2000 BC0: 869.70MHz ~ 893.31MHz CDMA2000 BC1: 1931.25MHz ~ 1988.75MHz
Modulation Type:	QPSK
Antenna Type:	PCB Antenna
Antenna Gain:	-0.5dBi for EVDO 850 1dBi for EVDO 1900
Power supply:	USB port supply

5.3 Related Submittal(s) / Grant (s)

This submittal(s) (test report) is filing to comply with Section Part 22 subpart H and Part 24 subpart E of the FCC CFR 47 Rules.

5.4 Test Methodology

Both conducted and radiated testing were performed according to the procedures document on chapter 13 of ANSI C63.4 (2003) and FCC CFR 47.1046, 2.1047, 2.1049, 2.1051, 2.1053, 2.1055 and 2.1057

5.5 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

- **CNAS —Registration No.: CNAS L5775**

CNAS has accredited Global United Technology Services Co., Ltd. To ISO/IEC 17025 General Requirements for the competence of testing and calibration laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.

- **FCC —Registration No.: 600491**

Global United Technology Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in files. Registration 600491, July 20, 2010.

- **Industry Canada (IC)**

The 3m Semi-anechoic chamber of Global United Technology Services Co., Ltd. Has been Registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 9079A-1.

5.6 Test Location

All tests were performed at:

Global United Technology Services Co., Ltd.

Address: 2nd Floor, Block No.2, Laodong Industrial Zone, Xixiang Road Baoan District, Shenzhen, China

Tel: 0755-27798480

Fax: 0755-27798960

7 SYSTEM TEST CONFIGURATION

7.1 EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner which intends to maximize its emission characteristics in a continuous normal application.

7.2 EUT Exercise

The EUT (Transmitter) was operated in the engineering mode to fix the Tx frequency which was for the purpose of the measurements.

7.3 Configuration of Tested System

7.4 DESCRIPTION OF TEST MODES

During all testing, EUT is in link mode with base station emulator at maximum power level. The spurious emission measurements were carried out in semi-anechoic chamber with 3-meter test range, and EUT is rotated on three test planes to find out the worst emission.

Frequency range investigated for radiated emission is as follows:

- 30 MHz to 9000 MHz for CDMA2000 BC0.
- 30 MHz to 19000 MHz for CDMA2000 BC1.

Test mode		
Band	Radiated emissions	Conducted emission
CDMA2000 BC0	1XRTT Link Mode	1XRTT Link Mode
CDMA2000 BC1	1XRTT Link Mode	1XRTT Link Mode

Note: The maximum RF output power levels are 1xRTT RC3+SO32 (+ F-SCH) mode for CDMA2000 BC0, CDMA2000 BC1 and CDMA2000 BC14 on QPSK Link; only these modes were used for all tests.

Conducted Power (dBm)			
Band	CDMA2000 BC0		
Channel	1013	384	777
1xRTT RC1+SO55	24.48	24.32	24.33
1xRTT RC3+SO55	24.5	23.33	24.32
1xRTT RC3+SO32(+F-SCH)	24.53	24.37	24.35
1xRTT RC3+SO32(+SCH)	24.49	23.35	24.31
1x EVDO RTAP 153.6	24.46	23.3	24.3
1x EVDO RETAP 4096	24.51	23.35	24.35

Conducted Power (dBm)			
Band	CDMA2000 BC1		
Channel	25	600	1175
1xRTT RC1+SO55	24.41	24.27	24.29
1xRTT RC3+SO55	24.42	24.27	24.3
1xRTT RC3+SO32(+F-SCH)	24.45	24.29	24.34
1xRTT RC3+SO32(+SCH)	24.43	24.25	24.31
1x EVDO RTAP 153.6	24.4	24.28	24.32
1x EVDO RETAP 4096	24.44	24.25	24.32

8 MEASUREMENT RESULTS

8.1 CONDUCTED OUTPUT POWER

Description:	A base station simulator was used to establish communication with the EUT. Its parameters were set to transmit the maximum power on the EUT. The measured power in the radio frequency on the transmitter output terminals shall be reported.
Test setup:	 <i>Note: Measurement setup for testing on Antenna connector</i>
Measurement Procedure:	The transmitter output was connected to a calibrated attenuator, the other end of which was connected to a power meter. Transmitter output was read off the power meter in dBm. The power output at the transmitter antenna port was determined by adding the value of the attenuator to power meter reading.
Test Instruments:	Refer to section 6 for details
Test mode:	Refer to section 7.4 for details
Test results:	Pass

Test Result

EUT Mode	Channel	Frequency (MHz)	Conducted Power (dBm)
CDMA2000 BC0	1013	824.70	24.53
	384	836.52	24.37
	777	848.31	24.35
CDMA2000 BC1	25	1851.25	24.45
	600	1880.00	24.29
	1175	1908.75	24.34

8.2 Effective Radiated Power and Effective Isotropic Radiated Power

Description	The substitution method, in ANSI / TIA / EIA-603-C-2004, was used for ERP/EIRP measurement, and the spectrum analyzer configuration follows KDB 971168 D01 Power Meas. License Digital Systems v01. The ERP of mobile transmitters must not exceed 7 Watts and the EIRP of mobile transmitters are limited to 2 Watts.
Test setup:	Below 1GHz:  Above 1GHz  Substituted Method Test Set-UP 
Measurement Procedure:	The EUT was placed on an non-conductive turntable using a non-conductive support. The radiated emission at the fundamental frequency was measured at 3 m with a test antenna and EMI spectrum analyzer. During the measurement, the EUT was communication with the station. The highest emission was recorded with the rotation of the turntable and the lowering of the test antenna from 4m to 1m. The reading was recorded and the field strength (E in dBuV/m) was calculated. ERP was measured using a substitution method. The EUT was replaced by dipole antenna connected, the S.G. output was recorded and ERP

	was calculated as follows: EIRP was measured using a substitution method. The EUT was replaced by or horn antenna connected, the S.G. output was recorded and EIRP was calculated as follows: ERP = S.G. output (dBm) + Antenna Gain (dBd) – Cable Loss (dB) EIRP = S.G. output (dBm) + Antenna Gain (dBi) – Cable Loss (dB)
Test Instruments:	Refer to section 6 for details
Test mode:	Refer to section 7.4 for details
Test results:	Pass

Measurement Result

Remark :

RBW= 2MHz , VBW= 6MHz

8.3 Occupied Bandwidth and 26dB Bandwidth

Description	The occupied bandwidth is the width of a frequency band such that, below the lower and above the upper frequency limits, the mean powers emitted are each equal to a specified percentage 0.5% of the total mean transmitted power. The emission bandwidth is defined as the width of the signal between two points, located at the 2 sides of the carrier frequency, outside of which all emissions are attenuated at least 26 dB below the transmitter power.
Test setup:	 <i>Note: Measurement setup for testing on Antenna connector</i>
Measurement Procedure:	The EUT's output RF connector was connected with a short cable to the spectrum analyzer, RBW (10/50KHz) was set to about 1% of emission BW, VBW= 3 times RBW(30/150KHz), -26dBc display line was placed on the screen (or 99% bandwidth), the occupied bandwidth is the delta frequency between the two points where the display line intersects the signal trace.
Test Instruments:	Refer to section 6 for details
Test mode:	Refer to section 7.4 for details
Test results:	Pass

Measurement Result

EUT Mode	CH	Frequency(MHz)	99% Occupy Bandwidth(MHz)	26dB bandwidth(MHz)
CDMA2000 BC0	1013	824.70	1.280	1.445
	384	836.52	1.278	1.435

8.4 Band Edge

Description	The power of any emission outside of the authorized operating frequency ranges must be lower than the transmitter power (P) by a factor of at least $43 + 10 \log (P)$ dB.
Test setup:	 <i>Note: Measurement setup for testing on Antenna connector</i>
Measurement Procedure:	1. The EUT was connected to Spectrum Analyzer and Base Station via power divider. 2. The band edges of low and high channels for the highest RF powers were measured. Setting RBW as roughly BW/100. 3. The RBW was replaced by 10 kHz, slightly smaller than the value in (2), due to the spectrum analyzer limitation to set the exact value. A worst case correction factor of $10 \cdot \log (1\% \text{ emission-BW/measurement RBW})$ was compensated.
Test Instruments:	Refer to section 6 for details
Test mode:	Refer to section 7.4 for details
Test results:	Pass

8.5 Conducted Spurious Emission

Description	The power of any emission outside of the authorized operating frequency ranges must be lower than the transmitter power (P) by a factor of at least $43 + 10 \log (P)$ dB. It is measured by means of a calibrated spectrum analyzer and scanned from 30 MHz up to a frequency including its 10th harmonic.
Test setup:	 <i>Note: Measurement setup for testing on Antenna connector</i>
Measurement Procedure:	1. The EUT was connected to spectrum analyzer and base station via power divider. 2. The middle channel for the highest RF power within the transmitting frequency was measured. 3. The conducted spurious emission for the whole frequency range was taken.
Test Instruments:	Refer to section 6 for details
Test mode:	Refer to section 7.4 for details
Test results:	Pass

8.6 FIELD STRENGTH OF SPURIOUS RADIATION

Description	FCC Part 22.917(a), Part 24.238(a), the magnitude of each spurious and harmonic emission that can be detected when the equipment is operated under the conditions specified in the instruction manual and/ or alignment procedure, shall not be less than $43 + 10 \log$ (mean output power in watts) dBc below the mean power output outside a license's frequency block (-13dBm)
Test setup:	Below 1GHz:  Above 1GHz  Substituted Method Test Set-UP 
Measurement Procedure:	The EUT was placed on a non-conductive turntable using a non-conductive support. The radiated emission at the fundamental frequency was measured at 3 m with a test antenna and EMI spectrum analyzer. During the measurement, the EUT was communication with the station. The highest emission was recorded with the rotation of the turntable and the lowering of the test antenna from 4m to 1m. The reading was recorded and the field strength (E in dBuV/m) was calculated.

	ERP was measured using a substitution method. The EUT was replaced by dipole antenna connected, the S.G. output was recorded and ERP was calculated as follows: EIRP was measured using a substitution method. The EUT was replaced by or horn antenna connected, the S.G. output was recorded and EIRP was calculated as follows: ERP = S.G. output (dBm) + Antenna Gain (dBd) – Cable Loss (dB) EIRP = S.G. output (dBm) + Antenna Gain (dBi) – Cable Loss (dB)
Test Instruments:	Refer to section 6 for details
Test mode:	Refer to section 7.4 for details
Test results:	Pass

8.7 FREQUENCY STABILITY V.S. TEMPERATURE MEASUREMENT

Description	The frequency stability shall be measured by variation of ambient temperature and variation of primary supply voltage to ensure that the fundamental emission stays within the authorized frequency block. The frequency stability of the transmitter shall be maintained within $\pm 0.00025\%$ ($\pm 2.5\text{ppm}$) of the center frequency.
Test setup:	 Note : Measurement setup for testing on Antenna connector
Measurement Procedure:	The equipment under test was connected to an external AC or DC power supply and input rated voltage. RF output was connected to a frequency counter or spectrum analyzer via feed through attenuators. The EUT was placed inside the temperature chamber. Set the spectrum analyzer RBW low enough to obtain the desired frequency resolution and measure EUT 25°C operating frequency as reference frequency. Turn EUT off and set the chamber temperature to -30°C. After the temperature stabilized for approximately 30 minutes recorded the frequency. Repeat step measure with 10°C increased per stage until the highest temperature of +50°C reached.
Test Instruments:	Refer to section 6 for details
Test mode:	Refer to section 7.4 for details
Test results:	Pass

8.8 FREQUENCY STABILITY V.S. VOLTAGE MEASUREMENT

Description	The frequency stability shall be measured by variation of ambient temperature and variation of primary supply voltage to ensure that the fundamental emission stays within the authorized frequency block. The frequency stability of the transmitter shall be maintained within $\pm 0.00025\%$ ($\pm 2.5\text{ppm}$) of the center frequency.
Test setup:	 Note : Measurement setup for testing on Antenna connector
Measurement Procedure:	Set chamber temperature to 25°C. Use a variable AC power supply / DC power source to power the EUT and set the voltage to rated voltage. Set the spectrum analyzer RBW low enough to obtain the desired frequency resolution and recorded the frequency. Reduce the input voltage to specified extreme voltage variation (+/- 15%) and endpoint, record the maximum frequency change.
Test Instruments:	Refer to section 6 for details
Test mode:	Refer to section 7.4 for details
Test results:	Pass

8.9 AC POWER LINE CONDUCTED EMISSION TEST

Test Requirement:	FCC Part15 C Section 15.207		
Test Method:	ANSI C63.4:2003		
Test Frequency Range:	150KHz to 30MHz		
Class / Severity: Class B	Class B		
Receiver setup:	RBW=9KHz, VBW=30KHz, Sweep time=auto		
Limit:	Frequency range (MHz)	Limit (dBuV)	
		Quasi-peak	Average
	0.15-0.5	66 to 56*	56 to 46*
	0.5-5	56	46
	5-30	60	50
* Decreases with the logarithm of the frequency.			
Test setup:	 Remark: E.U.T: Equipment Under Test LISN: Line Impedance Stabilization Network Test table height=0.8m		
Test procedure:	1. The E.U.T and simulators are connected to the main power through a line impedance stabilization network (L.I.S.N.). This provides a 50ohm/50uH coupling impedance for the measuring equipment. 2. The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs). 3. Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.4: 2003 on conducted measurement.		
Test Instruments:	Refer to section 6 for details		
Test mode:	Refer to section 7.4 for details		
Test results:	Pass
