**Overall Assessment Letter for MEGA2  
FCC id: RV2MEGA2**

I have reviewed this composite application and find it compliant.  
This is an application for a Cellular Phone supporting GSM/GPRS and Bluetooth.  
The GSM supports 850 MHz and 1900 MHz frequency range in both GSM and GPRS modes.

Please note the following:

1: SAR

The equipment was tested for both Held to Ear and Body SAR.

The Body SAR was tested with a separation distance of 1.5 cms which is stipulated in the user manual.

The highest reported SAR was 0.754 W/kg.

I have reviewed the SAR using the FCC provided Checklist and find it compliant.

I have attended BABT SAR training in June 2007.

2: Bluetooth and Co-transmission

The Bluetooth transmitter is categorically exempt and below the low threshold. No SAR evaluation occurred with this transmitter operating singly.

The product supports simultaneous transmission between the GSM/GPRS transmitter and the Bluetooth. There was no significant change in Body SAR value when both transmitters were active.

3: USB port

The client has issued a Declaration of Conformity for compliance with the FCC requirements and the product has the appropriate FCC labelling.

Yours sincerely

Allen Ferry
