Notes:

1. This module has an internal FROM and a function to erase/sort unnecessary data if certain HCI commands are issued and consume more than a certain level of free space in the FROM. This operation occurs at every module initialization (power-on).
   If supply voltage becomes non-defined states during initialization or writing in FROM, data in FROM might be destroyed. If the data in FROM is destroyed, module will not work correctly. Therefore please be sure to stabilize power source before RESET release.
   In addition please design module peripheral circuits to avoid temporary blackout of power source during operation.
   Please refer HD-AE-C 041081 for HCI command which rewrites FROM data.
2. Input /RESET signal of 10ms and more in condition of VDD_3.3V at over 3.15V.
3. During t5 input or output is unstable and this condition occurs at the following pins.
   (PIO_X, USB_DP, USB_DM)
   This unstable condition of t8 continues until the internal power of 1.8V reaches its steady state after VDD supply. After that, it takes some time to discharge when the unstable condition of PIO pin is output high. Discharged time changes depending on the outside load. Please pull-down PIO pin with a 4.7k ohm resistor to reduce the discharged time.
4. Some of User Settings are stored in FROM writable memory area and FROM free space is controlled by time required for Defrag will vary depending on the environment. Please conduct enough verification for the time required for the customer's product under customer's environment before use.
5. It may change due to the firmware version.

Notes:

a) Up to seven connections: a slave of up to two masters, and/or a master of up to seven slave.
Some operations restricted or non-functional in a scatternet.

b) Chip resource limits constrain the rate at which ACL and SCO connections can be made and broken to approximately
20 per 15 seconds. The time limit can be configured.

c) Up to three SCO links. Each SCO link can be routed over the chip's PCM interface or over HCI/BCSP.
Preliminary Support for SCO over USB or H4 is in place, but testing has been light.

d) No HCI SCO Host Controller to Host flow control support.
No HCI SCO Host to Host Controller flow control support.

e) Limited support for "best effort" and "guaranteed" Qos only.

f) Initial device name taken from PS Keys, and so is maintained through a reset/reboot.

g) HCI Reset does not work if the device is in local loopback mode.

h) Optional Paging schemes not supported.

i) Remote ACL loopback sometimes deadlocks when the device's flow control mechanisms assert to each other.

j) Bluetooth v1.1 specification command, deprecated in the v1.2 specification; support retained for backwards compatibility.

k) Bluetooth v1.1 specification command, renamed in the v1.2 specification.
Park Mode ---> Park State
Exit Park Mode ---> Exit Park State
Set Host Controller To Host Flow Control ---> Set Controller To Host Flow Control
Change Local Name ---> Write Local Name
Read SCO Flow Control Enable ---> Read Synchronous Flow Control Enable
Write SCO Flow Control Enable ---> Write Synchronous Flow Control Enable
Get Link Quality ---> Read Link Quality

l) Command not in the Bluetooth v1.1 specification.

m) Underlying Flow_Specification functionality the same as for QoS_Setup.

n) Command which rewrites FROM in module

o) CVSD not available with 3EV3 or 3EV5 EDR packets.

Instruction: fix module in metallic chassis

Although the indication label is stuck on the bottom of module, there are some covered GND areas with thin resin because the label is smaller than module.

There is RF monitor pad on the bottom of module; therefore, RF performance should be degraded if module was set on metallic chassis directly without space.

Please follow the guideline below.

Notes:

1. Strength pull-downs (pull-ups) are equivalent to a few kOhms resistance, but are more accurately modeled as a 40 uA current drain (source).
2. Weak pull-ups can be thought of 1M Ohm connections to VDD, but are more accurately modeled as a 1 uA current source.
3. Pin20 (VDD_3.3V) is used for power supply of BT module. (MAX 200mA).
