FCC ID: RZH730080501T4

Circuit Description

The 49.86MHz crystal oscillator drives the base of Q2 the final/buffer amplifier. The modulation provided by IC. The output of Q2 has the matching network consisting of L3 and C7 that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a 47.5cm long metal antenna. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 9 Volt ("6F22" size battery x 1) primary battery.

Operation Descriptions

The transmitter is a controller for a remote controlled toy car operating at 49.86MHz band. The transmitter is powered by a 9V battery (6F22) and the transmitting frequency is crystal controlled. There are four buttons to control the forward reverse motor and director of movement. The operation is achieved by different combinations of form pulse modulating signal on the 49.86MHz carrier frequency.

Remarks:
The transmitter is a 4 (***Button)*** transmitter.
The EUT continues to transmit while (***Button)*** is being pressed.
It is ***(Pulse)*** transmitter, Modulation by ***(IC)***; and type is ***(Pulse)*** modulation.
