Hello Tim,

Please find our replies toward this application below, thanks!!

1. Please find the Block diagram updated upon your comment.

2. Please refer to the updated schematics updated upon your comment.

3. The EUT is not user-servicable for the adjusting the channel in use, all the setting is defined and set in the firmware by the manufacturer before placing in the market.

4. The device is certified under TX and DoC. Please be advised that the DoC is already tested and reported by our Taipei facilities and which is the accredited test lab for the DoC scheme.

5. The antenna connector used on the devices is R-SMA, FYI..

6, 7 & 16. Please find the updates on the user manual just uploaded, thanks.

8. The model differences among the documentation is solely used for showing the differences on the ADSL I/O block for meeting the differences upon the ADSL operation mode/system between all the countries to be sold. FYI, the RF portion is totally identical among those 4 models.

9 ~ 14. Please refer to the updated report which showing all the re-done testing, due to the malfunction of our measuring equipment before, thanks!!

15. Please refer to the updated exhibits for the setup photo upon your comment.

Eric
