RF Exposure Evaluation Report

APPLICANT : TomTom International BV

EQUIPMENT: GPS Navigation System

BRAND NAME: TomTom

MODEL NAME : 4CR51

FCC ID : S4L4CR51

FILING TYPE : Certification

STANDARD : OET Bulletin 65 Supplement C (Edition 01-01)

We, SPORTON INTERNATIONAL INC., would like to declare that the device has been evaluated in accordance with FCC OET Bulletin 65 Supplement C (Edition 01-01), and pass the limit. Without written approval of SPORTON INTERNATIONAL INC., the test report shall not be reproduced except in full.

RF Exposure Evaluation Report

1. RF Exposure Introduction

Requirements

Three different categories of transmitters are defined by the FCC in OET Bulletin 65. These categories

are fixed installation, mobile and portable and are defined as follows:

Fixed installation:

Fixed location means that the device, including its antenna, is physically secured at a permanent location

and is not able to be easily moved to another location. Additionally, distance to humans form the antenna

is maintained to at least 2 meters.

Mobile Devices:

A mobile device is defined as a transmitting device designed to be used in other than fixed locations and

to be generally used in such a way that a separation distance of at least 20 centimeters is normally

maintained between the transmitter's radiating structures and the body of the user or nearby persons.

Transmitters designed to be used by consumers or workers that can be easily re-located, such as a

wireless modem operating in a laptop computer, are considered mobile devices if they meet the 20

centimeter separation requirement. The FCC rules for evaluating mobile devices for RF compliance are

found in 47 CFR 2.1091.

Portable Devices:

A portable device is defined as a transmitting device designed to be used so that the radiating structure(s)

of the device is/are within 20 centimeters of the body of the user. Portable device requirements are found

in Section 2.1093 of the FCC's Rules (47 CFR 2.1093)

The FCC also categorizes the use of the device as based upon the user's awareness and ability to

exercise control over his or her exposure. The two categories defined are Occupational/Controlled

Exposure and General Population/Uncontrolled Exposure. These two categories are defined as follows:

RF Exposure Evaluation Report

Occupational/controlled Exposure:

In general, occupational/controlled exposure limits are applicable to situation in which persons are exposed as a consequence of their employment, who have been made fully aware of the potential for exposure. Awareness of the potential for RF exposure in a workplace or similar environment can be provided through specific training as part of a RF safety program. If appropriate, warning signs and labels can also be used to establish such awareness by providing prominent information on the risk of potential exposure and instructions on methods to minimize such exposure risks.

General Population/Uncontrolled Exposure:

The general population / uncontrolled exposure limits are applicable to situations in which the general public may be exposed or in which persons who are exposed as a consequence of their employment may not be made fully aware of the potential for exposure or cannot exercise control over their exposure. Members of the general public would come under this category when exposure is not employment-related; for example, in the case of a wireless transmitter that exposes persons in its vicinity. Warning labels placed on low-power consumer devices such as cellular telephones are not considered sufficient to allow the device to be considered under the occupational/controlled category, and the general population/uncontrolled exposure limits apply to these devices.

2. Administration Data

2.1 Testing Laboratory

Test Site	SPORTON INTERNATIONAL INC.
Test Site I eastion	No. 52, Hwa Ya 1 st Rd., Hwa Ya Technology Park, Kwei-Shan Hsiang, Tao Yuan Hsien, Taiwan, R.O.C.
Test Site Location	TEL: +886-3-327-3456 FAX: +886-3-328-4978

2.2 Applicant

Company Name	TomTom International BV	
Address	Rembrandtplein 35 1017 CT Amsterdam The Netherlands	

2.3 Manufacturer

Company Name	Tech-Giant (Shanghai) Computer Co., Ltd				
Address	C#, No. 1, South Rongteng Road, Songjiang Export Processing Zone,				
	Shanghai, China				

SPORTON INTERNATIONAL INC.

TEL: 886-3-327-3456 FAX: 886-3-328-4978 FCC ID: S4L4CR51 Page Number : 6 of 8
Report Issued Date : Aar. 24, 2013

Report No. : FA331231

3. General Information

3.1 <u>Description of Device Under Test (DUT)</u>

Product Feature & Specification			
DUT Type	GPS Navigation System		
Brand Name	TomTom		
Model Name	4CR51		
FCC ID	S4L4CR51		
Tx Frequency	2402 MHz ~ 2480 MHz		
Antenna Type	Chip Antenna		
Type of Modulation	Bluetooth : GFSK		
Type of Modulation	Bluetooth EDR : π/4-DQPSK, 8-DPSK		
DUT Stage	Production Unit		

Remark: The above DUT's information was declared by manufacturer. Please refer to the specifications or user's manual for more detailed description.

3.2 Maximum RF output power among production units

	Bluetooth		
Mode / Band	1Mbps	2Mbps	3Mbps
	(GFSK)	π/4-DQPSK	(8-DPSK)
2.4GHz Bluetooth	0	0	0

3.3 Applied Standard

• FCC OET Bulletin 65 Supplement C (Edition 01-01)

FCC KDB 447498 D01 v05

SPORTON INTERNATIONAL INC.

TEL: 886-3-327-3456 FAX: 886-3-328-4978 FCC ID: S4L4CR51 Page Number : 7 of 8
Report Issued Date : Aar. 24, 2013

Report No.: FA331231

4. Conducted RF Output Power (Unit: dBm)

<Bluetooth Conducted Power>

	Frequency (MHz)		Average power (dBm)	
Channel		Mode		
		GFSK	π/4-DQPSK	8-DPSK
CH 0	2402	-6.06	-6.05	-6.00
CH 39	2441	-3.06	-3.18	-3.14
CH 78	2480	-2.27	-2.51	-2.50

5. RF Exposure Evaluation

Bluetooth Max Power (dBm)	mW	Test Distance (mm)	Frequency (GHz)	exclusion thresholds
0	1.0	5	2.48	0.31

Note:

1. Per KDB 447498 D01v05, the 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] $\cdot [\sqrt{f(GHz)}] \le 3.0$ for 1-g SAR and ≤ 7.5 for 10-g extremity SAR

- f(GHz) is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- The result is rounded to one decimal place for comparison

Conclusion: According to KDB 447498 D01v05 exclusion thresholds is 0.31 < 3, RF exposure evaluation is not required.
