

## OPERATIONAL DESCRIPTION:

In phone mode position, to start playback recorder disc of the PCM data are transfer to the IC101 of the pre-amplifier and then it will pass to IC201 when receiving the audio data, the IC201 stores the first audio packet, which contained 1-Ms audio data, into the internal storage buffer. The IC201 starts playing the audio data to the USB device output then connects with the USB cable to through the computer of the USB enhanced host. After the operating system must be working on the host PC.
