

## **Attestations from Manufacturer**

Regarding: Output power and 20 dB occupied bandwidth

**David Shipley of Honeywell**

**August 12, 2008**

**Output Power: Please provide a document describing the output power scheme and how it relates to the different antenna configurations?**

The professional installation guide is the best document with regard to antenna types and power settings...begins on page 24 " Multinode/WSG installation". On this page there is a Warning stating that the unit must be professionally installed. Then on the following pages there are tasks/steps to be followed by the user/installer.

**What is the 20 dB occupied bandwidth?**

The 802.11b/g occupied bandwidth is 22MHz and the 802.11a occupied bandwidth is 16.6MHz.
