

## *Work principle analysis*

### *Shoot the electric circuit:*

*Front, empress, accelerate, the left and right instruction inputs the IC( TX-2) proceeds the coding, from IC 8 feet exportations code the signal. The JT, Q3...etc. a signal for to coding signal with carrying first wave proceeding the admixture, and to after mix with proceeds the orthopedics, enlarge and pass again the antenna opens a new road the blast-off.*

### *Receive the electric circuit:*

*The antenna sends into after responding of the weak signal passes Q1 etc. a piece constitutes the super rebirth receives the electric circuit solution adjusts the IC( RX-2) proceeds to enlarge, orthopedics, solve the code and lock to save. From the IC 6, 7, 10 and 11 feet exportations are left, right, empress, ex- signal. The Q8- Q13 waits a piece constitutes in front and back the electrical engineering drives the electric circuit. The Q2- Q7 waits a piece completes the or so electrical engineering drives the electric circuit.*
