NEC

User Manual for N5106 Mobile Phone

Summary

Welcome to select N6207 mobile phone. This instruction manual explains the excellent performance of N6207 mobile phone for details. Besides basic function of talking, N5106 mobile phone and system network also provide you with practical multi-functions and service to facilitate your work and leisure activity.

N5106 mobile phone is specially designed for GSM900/1800/1900 network environment and is automatic three frequency mobile phone. With the trend that GSM is gradually becoming the standard of the communication system in the world, you will possess the free space for random communication in double frequency network.

We provide you with the multiple special fitting parts including charging battery and charger for your selection. Please refer to section 14 of this instruction manual for the detailed description on these fitting parts. If using fitting parts without permission from the providers, it is possible to result in danger; the resulted damage is beyond warranty.

N5106 mobile phone has passed the network access test from the PRC Ministry of Information Industry, all indexes reach the requirements for national standard and acquire the "telecom device network access license" issued by the Ministry of Information Industry (license number :XX-XXXX-XXXXXXX). you come across difficulty when using N5105 mobile phone, your can query and get help by national hot line consulting telephone (800-8xxxxxx) and after service telephone (800-8xxxxxx) set by NEC company.

Our company reserves the right to modify the technical specification in this instruction manual without pre-notification.

Explanation for reading the manual

Different styles are used to describe different operation details in this manual as follows:

Operation	Content description	Example
Display	Represented with normal character	0-9
content		
General key	Except the function keys, all others are represented by normal character with frame	0-9
Function key	Function keys are represented with overstriking and frame	OK
Menu item	Represented by italics with boldface Hold the call	

Note: The pictures used in the manual are the function illustration pictures only, and maybe they are different from display in your mobile phone. Please take yours as the standard.

Security and performance

Welcome to select NEC mobile phone. After you start using the phone, the background will send IMEI number to the management system of manufacturer, which helps you to query the purchase time and guarantee time of the phone under the situation of missing the warranty card and purchase receipt. Registration message will be sent in SMS and charged by the network provider as 0.10 or 0.15 yuan without other fee.

♦ Emergency service

In any country, if want to dial the emergency telephone, you can directly dial 112 (or other emergency service telephone), you must confirm the power of mobile phone is on and it is within the service area, then input the emergency service number (112 or other numbers) and tap $\[\]$ to make the call.

In any digital network, 112 emergent telephone service is set. In England you can also use 999 backup emergent calling number, but you must insert valid SIM card.

Note: Because of the property of the mobile network, each emergency call is not sure to succeed.

Individual

- When using the radio frequency device including mobile phone, it is possible to have some disturbance on some medical devices with bad shielding performance, such as Acousticon or heart pacemaker. Before using the mobile phone, please consult with the producer of the medical device or your doctor.
- ♦ For the user with heart disease, please pay close attention to the setting of ring tone volume and vibration.
- ♦ In the places where the explosive gas or production process exist, such as oil warehouse, or chemical factory, please pay the close attention to restricts of use for radio frequency device. When your mobile phone is in idle, it still emits electromagnetic signals. If required, you should turn off the mobile phone.
- Please pay attention to the transportation safety. When driving, the mobile phone should not be used, if using it; it is suggested to stop the car first.
- When your mobile phone is missing or stolen, please immediately inform the telecom department to prohibit the SIM card from using. It will make you free from the economic loss caused by other pseudo calls.
- ♦ When you contact with telecom department or sales agents, they should know the IMEI number of your mobile phone, which is printed on the label of back of the mobile phone (remove battery or dial "*#06#" to find it). Please record the number and keep it safely for future use.
- ♦ To make your mobile phone misused, please adopt prevention measures, such as: set SIM card PIN number or personal security code or change the code in time as other person knows it.
- ♦ When leave the car, please keep the mobile phone at the unobvious place, it would better take it or lock in the luggage boot.
- Please keep the children from the mobile phone, charger or battery.

Mobile phone

- The mobile phone includes the precise electric wires, magnet and battery system, which should be dealt with carefully, especially pays attention to the following important points:
- Your mobile phone can produce electromagnetic field; please do not place the magnetic storage media such as computer disk near to the mobile phone.
- ♦ When using the mobile phone near to the electric devices such as TV, telephone, radio and personal computer, it maybe leads to disturbance and effect on the performance of mobile phone.
- No matter when, please do not make the mobile phone and its fitting parts touch the liquid or keep them in the wet environment.
- Please do not keep the mobile phone in the environment with over-temperature or undertemperature.
- Please do not keep the mobile phone near to the flame, litten cigar or cigarette.
- Please do not scrawl on the mobile phone.
- Please do not fall the mobile phone off or behave any rude beating on the mobile phone.
- Please do not keep the mobile phone together with computer magnetic disk, credit card, traveling card or other magnetic objects. Otherwise the stored information in magnetic card or credit card is affected by it.
- ♦ Please do not keep the mobile phone or battery at the position with the temperature beyond 60°C, such as the car instrument panel, screensill or the back of the glass screen with direct shining.
- Please do not try to disassemble the mobile phone or any other accessories.
- Only little wet or anti-static cloth can be used to wipe the mobile phone. Please do not use dry or static cloth to wipe the mobile phone. Please do not use the cleanser with chemical reagent or grinding sand, otherwise the cleanser will damage the shell of the mobile phone.
- ♦ The receiver of mobile phone will produce some heat during the using normally; same as the mobile phone is charging.
- Please remember the recycle, the bandbox package for the mobile phone is very suitable for recycle.
- Please do not keep the mobile phone in the status of non-battery or empty battery capacity; otherwise some data may be lost.
- Some mental material included in the mobile phone may make you allergic, which is determined by your physique and health condition.
- Please do not put the mobile phone in the rear pocket of the trousers or skirt to prevent from damage when sitting. At the same time please do not put the mobile phone at the bottom of the bag to prevent from impact or strong extrusion.
- ♦ If vibration function is on, please keep the mobile phone far from heat sources (such as heater) and prevent it from sliding from the desk top for the vibration.
- Only handwriting pen authorized by NEC can be used. Use other handwriting pen maybe infract the warranty, and possibly damage the touch screen.
- Please plug and draw the hardwiring pen carefully, and plug the pen in the correct position without use to prevent from children.
- Please try to avoid scratching the touch pen. It is prohibited to use the normal pen, pencil, or other sharp instrument write on the touch screen.

Battery

- Please do not keep the batter device short circuit, which will damage on the battery, produce heat and even cause fire.
- ♦ It is prohibited to throw the battery into the fire for preventing from explosion. The discarded battery should be returned to the provider, or be put into he specified recycle bin; do not put them

- into the home waste.
- ♦ Please do not make the metal, such as coin or key ring, touch the end point of the battery caused short circuit.
- Please do not remove the battery when the mobile phone powers on.
- Please do not put the mobile phone's battery into mouth, because the electrolyte will result in poisoning.
- One built-in battery in the mobile phone can only be replaced by the professional engineer. If using the battery with wrong type to replace, it is possible to result in explosion. Please deal with the used battery according to provider instruction.
- When using any battery and charger which is not specified by the provider, potential danger exists. The resulted damage on the mobile phone is beyond the warranty.

Note: If the battery is damaged, the material in the battery should be prevented from touching. If touching the skin, it should be washed with plenty of water, or get help from a doctor if necessary.

On the way

- The car must be securely controlled all along, please pay attention to driving.
- Please comply with all rules in the local transportation security regulations.
- ♦ Before sending and answering phone, you should closely notice the local law system on use for wireless phone and pay attention to it when using.
- ♦ Please send or answer call after stopping the car according to the requirements of driving condition.
- Except for emergent situation, it is prohibited to stop the car at the side of the highway for receiving or dialing the phone.
- ♦ The electronic system in the car, such as the lock brake, quick control and combustion ejection system generally are not affected by the wireless radio wave. The manufacturer of this type of devices will tell you whether these devices have good shielding function. If you have doubt that the wireless wave causes the car's failure, please contact the franchiser. Please do not disassemble the mobile phone before the quantified professional personnel checks it.
- When the airbag swells, it will produce strong external force. Please do not install or place wireless talking device above the airbag or within the touchable area of the airbag after it extends. If the car wireless talking is not installed correctly, once the airbag swells, it will result in serious damage.
- When renewing petroleum, please turn off your mobile phone. Same case also applies to the place where the bidirectional wireless device is prohibited for using. Please do not put the flammable and explosive substances together with the mobile phone or carry them together; for internal spark may result in combustion.

On the plane

- ♦ When on the plane or near to the plane, please turn off the mobile phone and take out the battery. The behavior to use the mobile phone on the plane is illegal, which may result in danger for the operation of plane, also damage the mobile phone network. The violator may be paused or canceled the mobile phone service, even prosecuted, or punished doubly.
- Under the emergent situation, it is allowed to use the mobile phone with the agreement of crewman in terms of security regulation.

Device from other manufacturers

♦ If using the devices, cable or fitting parts from the other providers without NEC production or

authorization, it is possible to result in invalidation for warranty; moreover, it has also influences on the normal use of the mobile phone. It is obligatory to use fitting parts of NEC.

Maintenance service

♦ The phone, battery and inside of charge have no part which the user can repair freely. Advise you to take your NEC mobile phone to maintenance agent authorized by NEC for repair. When you need the maintenance service, please consult with the network service provider or NEC in detail.

Non-ionic radiation

A wireless device should connect to the antenna by the non-radiation cable (for example coaxial-cable). The antenna should not be installed near to the human body, except the metal shielding exists between them, such as metal roof. Only the antenna specially designed for this mobile phone can be used. The antenna without authorization or with fitting parts refitted or added by users own maybe damages the mobile phone or violates the related rules, which results in performance decrease or radiation with unqualified standards.

Effective use

• To obtain the best performance with the least power consumption, please pay attention to the following rules: when talking, please do not use the hand to cover the position of built-in antenna, which may affect the quality of talking and cause that the mobile phone works with the output power beyond the normal standard and shorten the talking and idle duration of battery.

Energy of radio frequency

♦ Your mobile phone is a kind of wireless transmitter and receiver with low power. Once the mobile phone turns on, it will receive and transmit wireless signal intermittently. The network system will control the transmitting power of the mobile phone.

Electromagnetic radiation

♦ Your mobile phone completely complies with the standard on the wireless radiation constituted by the nation authoritative organization and international health association. These standards of limitation are a part of the comprehensive rules and compose of permissive standard of public wireless radiation. These standards are gradually formed through the long-term and in-depth scientific research conducted by some independent scientific organization ICNIRP (International Commission on Non-ionizing Radiation Protection). These limit standards contain lots of security capacity so as to keep person safe, whatever the age or health status, and also consider the changeable factors of various kinds of measure condition.

NEC reserves the right to modify this manual without the pre-notification.

The manufacturer reserves the right to modify the product technical specification without the prenotification.

1 Start to use

Before using the mobile phone, please read this section. The section will tell you how to install charge and maintain your mobile phone's battery. It also tells you the information about the digital GSM network and instructs you how to insert and unlock SIM card. The detailed information about it will be also stated in the section.

1.1 Battery

The mobile phone contains one battery. When purchasing, the battery is not charged, but maybe supports to turn on the phone. A new battery should be charged for at least 16 hours, after the battery is used up for the first time, then it is charged fully for use; same as the second and third time, then the battery will easily reach the best status for use.

1.1.1 The disassembly and installation of battery

- When dissembling, make the mobile phone back face upward, and press the back cover's battery lock button at the bottom of the mobile phone, then slip the back cover downward and take off the back cover. Pull the tail of the battery upward and take out the batter.
- When installing, insert the clip at the top of the battery into the corresponding clamping slot in the phone and press the battery downward, then install the phone's back cover. Make sure that you have installed battery well before turning mobile phone on.

1.1.2 Battery charging

■ Insert the adapter of the charger into the plughole of mobile phone as follows;

- Connect the charger with the power. At this moment, a sign of battery will sparkle indicating the battery is charging;
- When the power capacity reaches the fourth level, and charging sign changes to the power capacity, which means the charging is completed. During the charging, the battery, mobile phone and charger will become heated, which is normal phenomena;
- After the charging completed, disconnect the power and pull off the charger.

Warning:

When charging, the phone must be placed at the site with the temperature between -5° C and 55° C and use the charger from the provider. When using the charger without permission, it is possible to result in danger, moreover violate the permission and terms of warranty for mobile phone.

1.1.3 Use of battery

The phone idle duration provided by the manufacturer is based on the ideal work environment. In the practice, the work duration of battery will vary with the different network state, work environment and use mode.

Please deal with the battery according to local regulations; do not take it as the life waste.

1.1.4 Indication of battery capacity

When the mobile phone powers on, the level of battery capacity displays on the top left corner of the screen. The residual power capacity is represented by indication bars from one to four levels.

1.2 Connection of network

1.2.1 SIM card

Your network provider will provide you with a plug-in type of SIM card (user identification card). SIM card is the key for you to enter the digital GSM network. **Before using the mobile phone, you must insert valid SIM card into the mobile phone.**

All information related with network connection records in the SIM card, also including name, telephone number and short message. SIM card can also be taken out from your mobile phone and insert into any GSM mobile phone for use (new mobile phone automatically identifies SIM card.).

To prevent from loss and damage on the information in the card, please avoid touching the metal plat area and keep the SIM far from electric and magnetic field. You can not enter the GSM network as the SIM card damages.

Warning: Before taking out SIM card, the mobile phone must be turned off. It is absolutely prohibited to insert into or take out SIM card when the phone is connecting to external power, otherwise SIM card may be damaged.

1.2.2 Insertion of SIM card

Generally SIM card is put into a card, and it must be taken out carefully before installation.

- Turn off the mobile phone and remove the battery and other external power.
- Insert SIM card into the bottom of lugs and ensure the metal plane area is downward and the position of its corner is the same as which of clamping slot's corner;
- Push SIM card, lock SIM card and install the battery;
- If you need take out SIM card, please first turn off mobile phone and take out the battery, then remove SIM card.

1.2.3 Unlocking of SIM card

To prevent from illegal use, SIM card adopts PIN (personal identification number) code to encrypt for protection. When this function is selected (refer to section 4.5.1), each time you turn on the mobile phone, you must input PIN code to unlock SIM card for sending or answering calls. A user can also relieve SIM card protection (refer to section 4.5.1). In this case, SIM card is not prevented from illegal use.

■ Long press **Pwr** to turn on the mobile phone;

■ Input PIN code, tap OK to confirm. For example: if PIN is set as 1234, then input as following: 1234

OK. If you continue inputting wrong code for three times, then your SIM card will be locked. The mobile phone will query PUK code. (Please refer to the instruction of SIM card.)

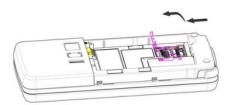

Note: Your network operator will set a standard PIN number (from 4 bits to 8 bits) for your SIM card; you should change it to your private password as rapidly as possible. Please refer to section 4.5.4

1.2.4 Connection to network

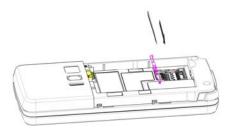

After SIM card is decrypted successfully, the mobile phone will search your registered network or local available network automatically (It will display "network is connecting, please wait for a while" in the screen). Once the connection is successful, the network sign for the network operator will appear on the top of the screen. At present, your mobile phone is in idle status; you can send or answer calls.

1.3 Insertion of memory card

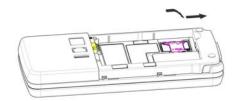

Before inserting, please push the memory card block as the direction on it, then open it as follows:

Insert the memory card as follows:

Close the card block as follows, and then lock it:

1.4 Idle screen and content

You can get the information needed via the indication and sign on the idle display screen.

1.6.1.2 Switch the input methods

When you want to input characters, you must choose a kind of input method firstly. If you want to choose the appropriate input method, please press: ** key.

The input methods built-in the microphone include as follows:

- Chinese stroke input law
- Chinese spelling input law
- **123**
- T9 En
- ABC
- abc

The corresponding icon to input law is showed on the lower-left corner of the screen. Tap switch to input method of handwriting

1.6.1.3 Stroke input law

The icon of stroke input law is:

Under the status of stroke input law, you may input the Chinese character according its stoke. Under this status, each key represents the stroke as follows:

Key	Corresponding stroke	Key	Corresponding stroke
1	Horizontal	4	Right-falling
2	Vertical	5	Horizontal and turning
3	Left-falling	6	? (Omnipotence key represents any stroke) hook

According to the Chinese character sequence, press the corresponding number key to carry out the stroke input. The stroke clue is showed on the lower-left corner of the screen and the candidate Chinese characters appear in the bottom row. Press **OK** or **0** to conform inputting.

You can press \overline{U} key or \overline{D} key to look over the candidate Chinese character across pages and use \overline{L} key or \overline{R} key to find out the Chinese character you need and then press \overline{OK} key to input this Chinese character.

Phrase input: after you input the Chinese character, the corresponding Chinese characters will appear on below the screen for you to choose to make up phrase that you need.

During the input stroke, you may press 6key to input "?" for replacing the unknown stroke. For example, when you want to input "好", but don't know how to input the first stroke "〈", you may press 6key for replacing it. At this time, the interrogation mark will appear as the stroke clue. Then you can press the corresponding number key ③(left-falling), ①(horizontal), ⑤(horizontal and turning)to the residual strokes according to the stroke sequence. You will see the Chinese character "好" appear in the candidate Chinese characters area. Press the OK key or press ② key for confirmation and finish the input.

1.6.1.4 Chinese spelling input law

The icon of spelling input law is:

TS PINYIN

The spelling input law provided by this mobile telephone is intelligent. So it has fewer keys. When using the spelling input law, you only need to press the number key with the letter and input the spelling letters of Chinese characters wrote. The spelling on the screen will change along with it continually. You may press key or key to choose the spelling you need, press key or key to look over the spelling options across pages and press key, key, key or corresponding number key to confirm your selection. At this time, the black cursor will appear on the candidate Chinese character. You may also press key or key to look over the candidate Chinese character across pages and press key to choose the Chinese character you need. At this time, the Chinese character you need will appear in the text input area.

The spelling input law is a intelligent input method. When finishing inputting, common word related to inputted character will appear in the select area. After selecting character may compose word quickly that increases input speed. When inputting new character, press number key directly character in candidate area will be updated automatically.

For example, inputting the "?", you only need to press number key $\boxed{5}$ and $\boxed{3}$ (you may see the corresponding spelling letter on the keyboard), then press \boxed{R} key to choose the spelling "ke". After you press \boxed{OK} key or $\boxed{0}$ key for confirmation, the cursor will appear in the Chinese character selected row. Press \boxed{R} key to choose the Chinese character "?". After press \boxed{OK} key , $\boxed{0}$ or press corresponding number key to confirm your selection, the Chinese character "?" will appear in the text input area. ("0 corresponds to "0 on the number key)

1.6.1.5 Number input law

The icon of number input law is:

The number input law is very convenient for number input. Input 0-9 ten numbers through $\bigcirc - \bigcirc$ keys. You only need to press the corresponding number key in order to input the number.

1.6.1.6 English small letter input law

The icon of English small letter input law is:

Under the status of English small letter input law, press the number key once for the first letter on the key and twice for the second letter and analogize sequentially. If the inputted letter and the first letter are on the same key, please wait for the cursor to appear again and then input the new letter. For example, if you want to input "OK", you only need to continuously press the number key three times for "O", then continuously press the number key twice for "K" and the input is finished.

1.6.1.7 English capitalization input law

The icon of English capitalization input law is:

The detailed operation procedure is the same as one of English small letter input law.

1.6.1.8 Intelligent English input law

The icon of Intelligent English small letter input law is:

The Intelligent English small letter input law has the same intelligence as the spelling input law. Use number keys ②⑤ to input the corresponding letter. Each letter can be inputted through pressing the key only once and the word on the screen will change along with it. You may press ket key or ket key to choose the candidate word or ket key or ket key to look over the candidate words across pages and then 按 ⑥ key to confirm your selection. At this time, the words you select will appear the text input area. For example, if you want to input "OK", you only need to press the number key ⑥ and ⑤ (you may see the corresponding letter on the keyboard). Then you will see the word "OK" to appear in the candidate area for word. Press ⑥ key to confirm your selection and finish the input.

1.6.1.9 Symbol input law

Press # key to activate the symbol input law, which is used to input various kinds of symbols conveniently. When choosing the symbol input law, thirty-six symbols will appear on the screen. You may press up, down, left, right key to choose the symbol. After you find out the symbol you need, press select key or OK key to finish the symbol's input. When you press # key again, exit the symbol input law and back to the input law you used at last time automatically.

1.6.2 Input method of handwriting

1.6.2.1 Input method of handwriting

Input method of handwriting is the main method to input character for this mobile phone, which adopts the advanced technology of character identification, so as to make you input Chinese and English in full screen conveniently and quickly.

Tap the icons of corresponding input methods to switch proper input method among Pinyin, Stoke, English/Number, Symbol and Handwriting. Tap to switch to keyboard input method.

♦ Handwriting Chinese

Before use input handwriting Chinese, confirm the type of character first. Tap ", and the cursor will display the current input position. Use the touchpen to write in the input area, pause for a while and the screen will automatically display the character identified, and spare character will display in the selected area. If the character displayed on the screen is not you required, tap the character in selected area to replace. This mobile phone has the function of intelligent Chinese, in detail that tap the spear character on the screen, it will display the second character formed with the first one usually. Tapping the second character directly will input it.

♦ Handwriting English

Except Handwriting Chinese, you can use Handwriting English to input English. Tap "Except Handwriting Chinese, you can use Handwriting English to input English." Tap "Except Handwriting English to input English." Tap "Except Handwriting English to input English."

♦ Handwriting number

Except Handwriting Chinese, you can use Handwriting number to input number. Tap " to complete the input.

1.6.2.2 Input of Pinyin

When edit, tap "##" to select input Pinyin, and use the touchpen to input Pinyin, then choose from the selected area, it will display in the input area; If the character displayed in the selected area is not you required, tap the arrow on the right side to flip pages for select other characters, then tap the character selected, it will display in the input area. Pinyin has the intelligent function as Handwriting Chinese. After select the handwriting character, the character that can usually form the words will display the selected area, which quickens the input speed with selecting the related characters. When write on the screen again, the character in the selected area will renew automatically.

1.6.2.3 Input of Stroke

When edit, tap "笔划" to select input Stroke。During the process of inputting, tap "?" to input "?" for substituting the unknown strokes. Take "好" as an example, if you do not know how to input the first stroke "〈", you can tap "?" for substituting. At this moment, Stroke prompts the question mark, then tap the number of rest strokes as their order, you will see the character "好" displays in the selected area, and

tap "好" to complete the input。

1.6.2.4 Input of English and number

When edit, tap "英数" to activate the input panel of English and number。 Directly tap to complete the input. Tap Cap to switch between capital letter and small letter. Directly tap the number in the display area to complete the input.

1.6.2.5 Input of Symbol

When edit, tap "符号" to select input Symbol。 During the process of inputting, use the touchpen to tap the symbol in the table, it will appear the position of cursor. Tap "一" and "一" for more symbols; tap "一" and "一" to lock/unlock the input screen. When locked, you can input more than one symbol in this screen, or only can input one symbol.

2 Dial and answer the phone

After the setting of mobile phone is completed, you can dial or answer phone. This section will provide all basic information you needed.

Note: when using the earphone, please insert and pull carefully to avoid damaging the hole of earphone

2.1 Turn on/off phone

- 1. Under the status of phone power off, long press **Pwr** key to turn on phone, then the starting animation appears.
- 2. If PIN code is required, please refer to section 1.2.3.
- 3. In the status of power on, long press **Pwr** key to turn off phone.

2.2 Make a phone call

When the sign of network operator appears on the display screen, the phone enters the idle screen, and then you can dial or answer calls. The indication bar on top right corner of screen displays the intensity of network signal (Four level bars mean the strongest signal). The barrier has great influence on the quality of talking, so moving in a small range can enhance the intensity of signal effectively.

There are multiple dialing modes from idle screen, namely: direct dial, phone book dial, quick dial and SIM card dial.

2.2.1 Direct dial

Dial the domestic phone

The simplest way to make a call is to press the number key to input the phone number (If it is domestic long-distance call, the area code is needed.) then press **Send** key or **OK** key to call. While dialing, the screen will display the name and number. After the call connected, it displays the call time, the phone number and name of the other side.

After inputting the phone number via press the number key, directly tap **Send** or press **OK** to call; tap **Option** to activate the menu as following:

Select *Call* to call out telephone;

Select *IP dial* to insert IP number in the front of the phone number then dial out (The function is needed to set before use, and refer to section 4.4.8);

Select *Save* to save the telephone number (Refer to section 9.3 for detailed operation);

Select Start countdown to start the countdown (Refer to section 12.8 for detailed operation);

Select *Send SMS* to enter short message edit screen and complete the corresponding operation (Refer to section 8.2.1 for operation on function of short message);

Select *Send MMS* to enter MMS edit screen and complete the corresponding operation (Refer to section 8.2.2 for operation on function of short message).

After talking, press **Pwr** key to hang up the phone. The phone will display the call duration for this time.

Dial the fixed extension telephone

Some fixed extension telephone can not directly be dialed. You need to connect the main line first then dial the extension number. If you insert symbol "P" between the main number and the extension number when inputting the number, the phone will make the call for you and dial the extension number automatically. The method to input "P" is: long tap # (which will be displayed on your screen). You can input more than one "p" to increase the duration of inputting the extension number.

Dial international phone call

When dialing international phone call, you only need input the symbol "+" (Long tap 0 key until the symbol "+" displays on the display screen.), then input the country code and whole telephone number.

For example: if making a phone call to France, you need long tap $\boxed{0}$ key until the symbol "+" appears, then input the country code of France "33" and whole telephone number.

2.2.2 Make a phone call from phonebook

In the main screen ,select Phonebook or press **Right** key to enter phonebook. Activate **Option** to select "find", find corresponding person and select corresponding phone, then tap **Send** to dial out phone.

2.2.3 Quick dial

Quick dialing is also called abbreviated dial, you can respectively set 8 number keys as telephone number (refer to section 4.4.4 on setting).

In idle screen, long press the number keys from 2 to 9 which are set as quick dial to automatically dial corresponding set phone number. If the selected number key is not set as quick dial, the mobile phone will prompt "Phone number is empty".

2.2.4 SIM card dial

In dial panel screen, tap number and # in turn to dial from SIM card. That is the phone number stored at the corresponding position in SIM card will display automatically. Directly press **OK** or **Send** key to dial out phone.

2.2.5 Unsuccessful calls

The phenomena of unsuccessful calls may appear during the dialing, for example: the line is busy, reject the call, the phone of other side is not within service area or the phone of other side is power off, etc. the phone will prompt "Call failed". At this time if you set auto redial (refer to section 4.4.3), the phone will automatically redial, and the system will prompt "Continue?". Press **OK** key or tap **Call** to redial or redial without operation for a while, and tap **Stop** to cancel it.

2.3 Answer the call

When a new call comes, tap **Answer** to answer the call.

After talking is over, press **Pwr** key or tap **Reject** to hang up the phone.

During the talking, the phone will prompt new call by short sound. At this time you can tap **Answer** to answer new call; moreover the previous call will become hold status. Please refer to section 2.4.4; if do not want to answer, you can press **Pwr** key or tap **Reject** key to reject the call.

7.8 Storage status

It queries the situation of used space by Video, Sound, Picture, Music and Java. It also shows the used space and the total space.

8 Messages

This section will introduce message services supported by GSM. Some service may be not supported by local or roaming GSM.

8.1 Messages

Your phone can receive the edited text message via the service center. You also can send a new message or reply a message (via the service center) if the network supports. If your service provider supports message service, you can receive/send messages optionally. (If PIM security password is set, the correct password is required to enter the window of Messages, the detailed content of PIM security password refers to section 4.5.3).

The functions of messages include: Create, Inbox, Outbox, Sent, Drafts, My folder, Email and Voice mail.

MMS (Multimedia Messaging Service, MMS) contains the content of word, pictures videos and sounds. You can not only send or receive pictures and word, but also receive the file with sounds and videos. (If PIM security password is set, the correct password is required to enter the window of Messages, the detailed content of PIM security password refers to section 4.5.3).

Note: MMS service needs the support of the network operator or service provider.

The phone only can receive MMS with 100KB most, if beyond this limit, it can receive this MMS but can not read. At the same time, the phone only can send MMS with 100KB most.

The phone can receive MMS with more than one page, ie. Each page has one picture, one song and word, and MMS contains much this kind of pages. If MMS has pictures, the phone will adjust the size for display normally.

Note: you maybe need to pay fare for each sent MMS to the network operator or service provider.

MMS has the following format:

- Picture: JPEG, GIF, WBMP, PNG
- Sound: MIDI, AMR, MP3, AAC
- Video: 3GP, MP4

If the messages received contains the nonsupported content, this content will not be displayed or played or there is an error prompt o

Note: Many causes can cause to send MMS sent failed, so please do not use MMS to send the important content.

8.2 Create

8.2.1 SMS

When create new message, select Create, and choose SMS within the type, tap Select or press OK key to enter the edit screen of creating new message.

A) TO

Directly tap "To" to enter PB to select receiver or tap blank area to enter the screen of inputting the phone number. At this moment, you can tap simulation key to input phone number or tap \boxed{PB} to select the number of contact person or select the contact person within the group from phonebook: \boxed{PB} to enter the screen of contact person, press \boxed{U} or \boxed{D} key to select the receiver, or directly tap the checkbox in front of

receiver, tap **OK** to complete the section into Create SMSscreen. In create SMS screen, press **OK** key again to enter the screen of contact list and activate **Option**: *Create* to add the receiver; *Phonebook* to enter the screen of contact person and add the contact person; *Groups* to send the edited message to the group numbers; The newly contact to send the edited message to the newly contact; *Delete* to delete the selected receiver; *Delete all* to delete all receivers. When receivers are over 50, the phone prompts "Too many selected".

On the screen of "Create", to operate as followings:

Select **Send** to send current message (It will be valid only when the contact person is added.);

Tap **Back** the system prompts "Save?", which save this message into Drafts for future use to avoid the repeated input. The content of Drafts refers to section 8.7 (It is available only when the content is edited.)

Note: Receiver is 50 at most once when sending messages..

B) Content

Tap scroll bar to select "Content", activate **Option**:

Select *Insert contact* to insert the contact person and corresponding number;

Select *Insert quick text* to insert frequent word about related subject provided by the phone in present message to avoid the repeated input;

Select Save as quick text to save the message as quick text;

Select Save to drafts to save the message. (It is available only when the content is edited.)

Directly tap the content to enter the edit screen, which refers to section 1.6.

C) Send messages

Before sending message, you must input the number of SMS center. This step needs to be set only once, please refer to section 8.11.

When the message is sending, the phone will prompt "Send to..."; if sending is failed, the phone will prompt "Send failed!" and the message which failed sending or unsent messages will save to "Outbox".

If sending is successful, the phone will prompt "Sending successfully", the sent message will be put into "Sent".

8.2.2 MMS

MMS (Multimedia Messaging Service, MMS) contains the content of word, pictures, sounds and videos. If MMS is beyond the limit, the phone can receive it but can not read. The phone only can receive 80 pieces of MMS most. MMS centre will send the user a message for new MMS, and the user can select to receive MMS automatically or manually.

When create new message, select *Create*, and choose *MMS* within the type, tap **Select** or press **OK** key to enter the edit screen of creating new message.

8.9 Email

Note: MMS service needs the support of the network operator or service provider.

8.9.1 Email manager

Email function of the phone can receives and sends Email not only WAP station supports but also POP3 ,SMTP and so on support. It makes you more convenient and quicker when receiving and sending Email. Before you use Email function, you have to understand the related knowledge first:

Mailbox: Register some Internet stand to apply for one mailbox belongs to yours that is "the mailbox" in this handbook. This mailbox is not in yours telephone, but in the computer system called the Email server of network operation business for you providing this kind of service. Your all received and the sent mails are relayed by this server for you.

Server: It is computer system of the network operation business providing this kind of service for you. You can obtain name of this server providing the service for you by consulting the network operation business. In the Email window, tap *Settings* to choose content set and then tap Edit to enter Email setting window:

Set default: set the current mailbox as default one

Edit:

- 1. Name: It is your mail service operation business name
- 2. SMTP: It is specially used to send Email. All mails that don't be sent successfully can be moved into Outbox automatically (smtp.XXX.com);
- 3. Port: Add SMTP the port number (please consult yours mail service operation business);
- 4. POP3: It is the server that specially used to receive the mail. Once you connect the network to enter the mailbox, the telephone can download automatically new mail from POP3 server, when you choose to receive the mail, the new mail will be downloaded into Inbox in the phone (pop3 .XXX.com);
- 5. Port: POP3's port number (please consult your mail service operation business);
- 6. Address: It is the address that receives the mail. This is you address on Internet. Your mail that other people send will deliver in your Inbox according to this address. This address is the system assigns for you when you apply for the mailbox, once produces, the user might not change. This phone when use email function, may use the ordinary data call way to connect the Internet, may also use the GPRS way to connect the Internet, in which way is decided by you in "the network service" under "the digit dialing establishment". When you start the email function, the telephone can connect the Internet by the way which determined by you;
- 7. Password: Password is determined by you when you apply for email. When you register the mailbox, the server can confirm your status according to your user name and the password.

 Note:

Here mentions the user name and the password are different with you connecting Internet's user name and the password; When connecting the Internet ,you must input the user name and the password as the identification authentication you connect the network to need ,but here the user name and the password are you necessary as confirms a mailbox the legitimate owner to enter mailbox.

Ordinary data call way, by continually net time cost; But the GPRS way, by you the data quantity charge which downloads from the Internet.

In front of the use email not yet establishes the email account, the phone can prompt you to have to carry on the mailbox setting.

If you use the GPRS way to connect Internet, then you should set Bearer type as GPRS only in "Connection profile". Please refer to section 4.8.

8.9.2 Receive Email

Select *Receive* in Email screen, the phone will connect internet automatically and the phone will register your mailbox. If disconnect internet, the prompt will pop-up to alert. You can try to connect again.

If the mail will be bigger than 150K, the telephone will prompt you unable to download; when entering Inbox, you may examine mail content received.

Activate Option :

Receive: receive current selected Email into Inbox on Phone and the system will give a corresponding prompt;

Previous page: View Email list of previous page in the Inbox;

Next page: View Email list of next page in the Inbox;

Email content detail: View From, Title, Priority and size of current selected Email.

Note:If you defined one default mailbox in the "mailbox settings", the telephone could directly register this default mailbox.

8.9.3 Write Email

8.11.6 Storage status

This function displays storage status for SMS, including phone and SIM card.

9 Phonebook

This section describes various kinds of functions of phonebook. In main menu, press side key to select the icon of phonebook for entering the functions of phonebook (If PIM security password is set, the correct password is required to enter the window of Messages, the detailed content of PIM security password refers to section 4.5.3).

9.1 Grouping of phone book

In the phonebook of this mobile, all contact persons can be grouped. Among them, a special group is SIM card group. The difference between it and other groups is: Its corresponding name can be only stored for a telephone number. SIM card can keep some important telephone numbers at any time, and make you find out the telephone number needed when use it on other mobile telephone. But for SIM card the number of records and the character and figure of each record are limited, which is decided by the capacity of SIM card.

Except SIM card group, other groups consist of many records and the contents of everybody's record include Groups, Name, Mobile, Home, Office, Company, Department, Title, Fax, Address, Birthday, Email, Memo and Portrait.

When creating a new record, it will be put into the default group if not specified.

9.2 Find

After entering the phonebook, tap **Option** to select *Find*, and the search types for selecting will display as following:

Select *Name:* to input a special word to search the record with the special word within all recorded names;

Select *Number*: to input a special phone number to search the record with the special phone number within all recorded numbers.

You can also search contact by taping quick designate button .You need only tap corresponding button with the first alphabet of name and find desired contact from those whose name has the alphabet as first one.

9.3 Create

After entering into the phonebook, activate **Option** key and select the *Create*. Firstly to confirm the storage type, including two options: "Phone" and "SIM". If "full memory" appears, which means the mobile phone's memory has no enough space to save the record. The memory of phone must be cleaned up for more space.

When the storage type is "Phone", on the screen of new record, it may input Groups, Name, Mobile, Home, Office, Company, Department, Title, Fax, Address, Birthday, Email, Memo and Portrait.

Select Groups, directly tap the group icon to select the subgroup via side key, tap **Select** or press **Ok** key to confirm the selection or directly tap the group needed;

Input Name, Company, Department, Title, Address, Email and Memo, it will enter the edit screen of character. Please refer to the section 1.6 for operation of editing character.

Input Mobile, Home, Office, Fax, Address and Birthday, it will enter into the dial panel, directly tap to input the content, then tap \mathbf{Ok} or press \mathbf{Ok} key for confirmation.

Select Portrait, tap the icon in the middle of screen or press **Ok** key to enter the portrait list, then tap **Preview** to view the CLI. Tap **Set** or press **Ok** key to set it as CLI of contact person

After completing the input, tap **OK**, the mobile phone will prompt "Successfully".

When the storage type is "SIM", it may only input name and one phone number.

9.4 Copy

"Copy" is a shortcut provided to replace the mobile phone or copying the information. It is possible to copy the records on the phone with multi-ways except. Company, Department, Title, Fax, Address, Birthday, Email, Memo and Portrait can not be copied.

Copy current: Copy the current contact of select person. If the contact is save on the SIM card, to select the content among: *Mobile*, *Home* and *Office*; If saved on the phone, the 3 phone numbers of each record will save as 3 records with same names in SIM card;

Multi-copy: Select the type of copying between *From phone* and *From SIM*.

Select *From phone:* copy to SIM card, the 3 phone numbers of each record will save as 3 records with same names in SIM card.

Select *From SIM:* each record in SIM card will take one place in the phonebook of mobile phone, and select the save place. When copying, the record will be copied to the Unfiled group in the mobile phone. In the screen of multi-copy, select the person that needs to be copied, tap the checkbox in front of item, tap \overline{OK} or press \overline{OK} key to confirm the selection. During copying, tap \overline{Option} to select *Select , Select all* or *View*;

Copy all: choose the linkman that needs to be copied, then tap **OK** key for confirmation. You may choose **From phone** and **From SIM**.

If the space is not enough during the copying, it will prompt "SIM is full" and "Phone is full".

9.5 Move

Move is a shortcut function provided for replacing the mobile phone and copying the information. If moved, the original place will not save the content moved. It can move the phone records in the phonebook with multi-ways. Company, Department, Title, Fax, Address, Birthday, Email, Memo and Portrait can not be copied.

Move current: Move the current contact of select person to phone or SIM card. If the contact is save on the SIM card, to select the content among: *Mobile*, *Home* and *Office*; if saved on the phone, the 3 phone numbers of each record will save as 3 records with same names in SIM card.

Multi-move: Select the type of moving between From phone and From SIM.

Select *From phone:* move to SIM card, the 3 phone numbers of each record will save as 3 records with same names in SIM card.

Select *From SIM:* each record in SIM card will take one place in the phonebook of mobile phone, and select the save place. When moving, the record will be moved to the Unfiled group in the mobile phone. In the screen of multi-move, select the person that needs to be moved, tap the checkbox in front of item, tap \overline{OK} or press \overline{OK} key to confirm the selection. During moving, tap \overline{Option} to select *Select, Select all* or *View*;

Move all: Move all contacts from phone or SIM to SIM or phone. If you move record on the phone to SIM card, the 3 phone numbers of each record will save as 3 records with same names in the SIM card.

If the space is not enough during the moving, it will prompt "SIM is full" and "Phone is full".

9.6 Delete

The function of deleting the records in phonebook is set in this mobile phone. You can delete the records of SIM card and phone one by one or by package, and also delete them multiply. Select *Delete* the

system will prompt, tap \overline{OK} or press \overline{OK} key to delete the current highlighted data of the person selected, tap \overline{Cancel} not to delete the record.

9.7 Multi-delete

Select the type of deletion between *From phone* and *From SIM*. In the screen of multi-delete, select the person that needs to be moved, tap the checkbox in front of item, tap **OK** or press **OK** key to confirm the selection. During moving, tap **Option** to select *Select, Select all* or *View*.

9.8 Delete all

Select *Phone* to delete all record on the phone one-off;

Select **SIM** to delete all record on SIM card one-off;

Select All to delete all record on the phone and SIM card one-off.

9.9 Groups

Put the phone records into different groups as various property for convenient use o

The phone has 20 groups, and tap Option:

Select **Send SMS** send SMS to all group members;

Select Send MMS send MMS to all group members;

Select *Edit* to rename, select group icon and ring tone (rename is not available for unfiled group).

In the group list, tap OK to enter the selected group, then tap Option to Add, Call, IP dial, Send SMS, Send MMS, Delete (group), Delete (phone), Delete all (group), Delete all (phone) (Unfiled group does not have Delete (group) and Delete all (group)).

12.11 Connection tools

12.11.1 Bluetooth

Since devices with wireless Bluetooth technology communicate using radio waves, your device and the other device do not need to be in direct line-of-sight. The two devices only need to be within 10 metres (32 feet) of each other, although the connection may be subject to interference from obstructions such as walls or from other electronic devices. There may be restrictions on using Bluetooth technology in some locations. Check with your local authorities or service provider.

You can connect wirelessly to other compatible devices with Bluetooth technology or send Fax by Bluetooth connection.

Activation: Turn Bluetooth on/off. If you select turn off Bluetooth, the phone will end all Bluetooth connection and you can't send /receive data. When performing the other process, please consider it that Bluetooth connection will consume battery meter and shorten time of phone operation.

My devices: View Device list. Activate Option: Search more: to search partnership existed, if you haven't

added devices or want to add new devices, select *Search more*, the system will search new devices automatically, then show the result. Press **Back** to return device list. Creating a partnership between two devices involves entering the same personal identification number (PIN) on both devices. Creating a partnership between two devices is a one-time process. Once a partnership is created, the devices can recognize the partnership and exchange information without entering a PIN again. Make sure the two devices are within a range of 10 meters from one another, and Bluetooth is turned on and in discoverable; select *Rename* to enter a new name for the partnership; select **Delete** to delete added devices; select **Delete all** to delete all devices in device list;

Visibility: to turn on/off visibility of the phone. If select off, phone won't be found by the other user;

. *My phone's info*: to view corresponding information of phone, including phone's name that can be changed and phone' address;

BT data exchange: Turn on/off function of BT data exchange;

Bluetooth services: to view Bluetooth services, including Headset, Handfree, Dial-up network, FTP data transfer and OPP data transfer.

You can use Bluetooth device to receive call and dial for internet explore after Bluetooth is connected..

12.11.2 PC tool

This cell phone is capable to transmit phone book, preferred rings &pictures to user using the connection between data lines (special accessory) and PC computer. When data lines are used, this cell phone supports Windows 95, Windows 98, Windows NT, Windows 2000 and windows XP. If data lines are not included in the purchase of cell phone, place an order from your local retailer. To activate the function as to transmit documents, the installation of synchronized software is required in PC computer.

12.11.3 GPRS wizard

It stands for General Packet Radio Service (GPRS). Using GPRS technique, user is able to send or receive data through cell phone network. In this sense, GPRS is a way for data transmission, which supports user's wireless connection with internet data network. And the GPRS application covers such services as WAP, multi-media information, short message, the downloading of JAVA application program, and GPRS dial-up program (e.g. Internet &e-mail).

Events to be noted before the use of GPRS technique:

- 1. Consult the local network operator or service supplier for the availability or the application procedure (if GPRS not available) for GPRS service;
- 2. Save GPRS settings necessary for each application concerning GPRS data transmission;

Price for GPRS and other applications

Both the use of GPRS connection and various applications concerning GPRS data transmission need to be paid respectively. The payment for normal data dial-up is calculated by the time duration of internet connection, while that for GPRS mode is calculated by the data amount downloaded from internet. Please consult local network operator or service supplier for detailed information relevant to price.

12.12 STK

STK (SIM TOOL KIT) allows to operate its own software based on SIM card. STK card can receive and send short message data of GSM. This mobile phone supports the service for various network operators.

13 Common questions

The mobile phone can not power on.

■ The phone can not make call and power off due to lower battery. Please charge the battery.

The mobile phone can not to dial some calls.

■ The Call barring has been set, which restricts the use of mobile phone, please check and cancel it.

Someone else is answering my call.

■ The mobile phone has been set to transfer your call to another number, please check and cancel it.

The Display information

During the operation, the mobile phone may prompt the display information due to following error operations:

"Insert SIM card"

SIM card must be inserted into mobile phone before used, or taken out (If already exists) for cleanup the golden area with dry cloth and then insert again.

" Network not available"

Your mobile phone is out of the area covered by network (or the physical barrier might exist between your phone and transmitter), and unable to dial or answer calls. Please close to the window if indoors.

"Emergent call only"

■ If your mobile phone is out of the area covered by network of service supplier, and another network within your area may allow you to dial emergent call subject to the intensity of signal.

" Invalid SIM card"

■ The SIM card has been locked, which is unable to accept the SIM card inserted. Please insert correct SIM card or contact with the distributor.

"Enter PUK code"

■ SIM card has been locked due to the wrong input of PIN code for three times continuously. Therefore, you must apply a special eight-digit PUK code from the network supplier to unlock the SIM card (PUK code may be supplied with PIN code at same time).

Warning: If input wrong PUK code for ten times continuously, SIM card will be locked permanently. You must apply a new SIM card from the network supplier.

14 Fittings

Charger

- It will charge the Li battery quickly and completely. The charge duration varies subject to the capacity of battery.

Li battery (One piece)

- The Li battery 830 mAh can provide the standby duration lasting for 300 hours or call duration lasting for 180 minutes subject to practical using condition.

Note: Only the approved battery, charger and other accessories by manufacturer of mobile phone may be used. Using other types of accessories will infringe the approval and warranty of this mobile phone and cause the danger.

15 Maintenance guideline

Welcome to use mobile phone produced by NEC Company. Whereby a failure occurs in the use of your mobile phone, you are requested to contact with distributor or consult NEC maintenance center; whereby the repair is needed, your mobile phone may be sent/brought to local maintenance center (The specific maintenance centers shown in the voucher of warranty provided with mobile phone.); whereby a maintenance center is not available in your place, you are requested to bring the mobile phone and copy of its receipt to distributor for EMS mailing.

You shall be cautious to the use of mobile phone as it is made using excellent design and technique. To prolong the life of mobile phone, you are required to perform the obligations specified in the warranty terms as followings:

- · Keep the mobile phone and its accessories away from the children;
- · Keep the mobile phone dry all t he time as rain water, moisture, various liquid, and water contain mineral materials, which may corrode the electronic circuit;
- · Do not use, store the mobile phone in places containing dusts, which may damage its removable parts;
- · Do not store the mobile phone in the excessive hot place, as the high temperature might shorten the life of electronic parts, damage the battery, and deform or even melt some plastic parts;
- · Do not store the mobile phone in the excessive cold place, or the humidity may form inside of the mobile phone when the temperature of mobile phone rises (up to normal temperature) , which may damage the circuit board;
- · Do not attempt to disassemble the mobile phone as the operation by unprofessional personnel will damage it:
- · Do not throw, beat or shake the mobile phone, or the internal circuit board might be damaged;
- · Do not clean and wash the mobile phone with strong chemical product, ambulant, or strong detergent;
- · Do not dye the mobile phone, or it will obstruct the removable parts so as to affect the normal work;
- · To change the antenna, only authorized or matchable antenna shall be used. Any use of unauthorized antenna or modified accessories may damage the mobile phone and infringe the relevant regulations for wireless devices.

All above recommendations are also applicable to your mobile phone, battery, charger and each fitting part. If they can not work normally, please bring/send them to the qualified maintenance organization nearest to you for repairing.

16 RF Exposure Information and Statement

The SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue. Device types N5106 (FCC ID: S5D-KMP6J1CT1) has also been tested against this SAR limit. The highest SAR value reported under this standard during product certification for use at the ear is 0.214 W/kg and when properly worn on the body is 0.082 W/kg. This device was tested for typical body-worn operations with the back of the handset kept 1.5cm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 1.5cm separation distance between the user's body and the back of the handset. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- -Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- -Consult the dealer or an experienced radio/TV technician for help.
