Dear Helen,

Reply #1 Please find the revised test report.
Reply #2 Please find the explanation in the revised test report.
Reply #3 Please find attached revised user's manual.

regards,

S. S. Liou

Question #1: Test Report - Channel bandwidth: The test results on sheet 29 of 37 are not exactly the delta you got from the plots in Appendix 4. They are very close, though. Please explain where the test results on sheet 29 come from.

Question #2: Test Report - Dwell time: Please explain how you calculate the dwell time. The formula in the report: $31.6 \times 1.90 \text{ms} \times 159.9 = 303.81 \text{ms}$ is wrong ($31.6 \times 1.90 \text{ms} \times 159.9 \neq 303.81 \text{ms}$). Please explain where 320.1, 159.9 and 106.81 come from. Please also differentiate Dwell time plots with mark of DH1, DH3, DH5 respectively.

Question #3: User manual: Please add RF exposure statement into the user manual, e.g. The antenna(s) used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Best Regards,
Helen Zhao

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.
