

## **Difference description**

1. MID7012 and MID7012C are identical in schematics and RF modular. MID7012 is a multi-touch resistive touch screen; MID7012C contains two multi-touch modes which are resistive touch screen and capacitive touch screen.
2. The position of Touch Panel connector is difference, for MID7012, it is nearby Power key, but for MID7012C, it is close with LCD connector. So there is little difference in the PCB layout and printing.
