

## CIRCUIT DESCRIPTION

In transmitter, press the Forward, Forward-Left, Forward-Right, Or press the backward, Backward-left, Backward -Right, Or press the Left,Or press the Right, output SH pin 7 supply encoding signal. Q1 & X is a crystal oscillator of 49.860MHz frequency. Q2 is a modulator. Output of Q2 drives the transformer T1. The antenna is coupled to the modulator by the transformer.

In receiver L1 is tuning 49.860MHz frequency. And Q3 is a RF amplifier and detector stage. U1 is a signal amplifier and decoder, it controls the output of IC1 pin6, 7 and pin10,11 to IC1pin3, 5, IC3pin7, 9 are left -motor driver, and IC1pin7,9,IC3pin3,5 are Right -motor driver.

## ANTENNA AND GROUND CIRCUITRY

This unit makes use of an external flexible 35 centimeters long mast antenna. The antenna is inductively coupled. The unit relies on the ground tract of the printed circuit board. No external ground is provided. Energy is supplied by 6F22(9 volts).
