VK

VK

Our sincere thanks for buying our VK mobile phone.

The product is designed and manufactured in strictly accordance with both our in-house and international standards, and it is subject to severe quality tests including temperature, humidity, shockproof, dust, vibration and drop test. The product that has passed such a series of tests would surely bring you a great satisfaction.

The contents of manual and the functions of mobile phone are subject to partial modification, if needed.
To ensure the advanced manner and culture desirable for using a mobile phone, please set your mobile phone in vibration mode in a public place.

Instructions for users

● Please do not let others use your mobile phone if it is possible.
● Please contact designated service center only for A/S
● Please immediately contact mobile phone service provider in the event the mobile phone is missing or stolen
※ Additional device or accessory that will lead to any modification in originally designed function shall not be attached to the product

Tip for safe and efficient use

Mobile phone, when a power is on, is designed to transmit or receive high frequency energy.
International associations made public the standards and recommendations on physical influence on human body that might be caused by high frequency energy.

For further details, please refer to detailed information for safe and efficient use of mobile phone (see page 128)

Antenna

Use approved products only. Using others not recommended or unauthorized modification might cause damage to mobile phone, thereby leading to being unacceptable for free maintenance services
Contact damaged antenna may cause a slight burn on skin

Normal position

Hold it in such a way doing with normal phone, with an antenna standing upright over the shoulder

Effective use of mobile phone

Pull out the antenna at full length.
Hold it in such a way doing with normal phone, with an antenna standing upright over the shoulder. Do not touch antenna while talking over the phone. It may lead to deterioration in sensitivity and unnecessary power consumption.

Mobile phone and electronic device

Though most electronic devices are designed to be free from high frequency energy, some products may cause trouble in using mobile phone.

Airplane

Please turn off the mobile phone when boarding. On-board electronic device may be affected by mobile phone

Hearing aid

Some hearing aid can be interrupted by mobile phone

Pace Maker
Medical Instrument Manufacturer Association didn't recommended mobile phone while wearing Pace Maker since it can be affected by mobile phone within a distance of 15cm. In case of using mobile phone inevitably, please ensure to keep distanced 15cm at least on the other side.

Other medical instrument
When using other medical instrument personally, please consult manufacturer to ensure it is safe from high frequency energy. Since medical instrument in hospital tends to be sensitive to high frequency energy, please ensure your mobile phone is in turn-off mode in hospital.

Use mobile phone while driving
Please get yourself acquainted with relevant laws and regulations.
● Please be concentrated on driving
● Please avoid talking over the phone while driving for safe. If inevitable, make use of hands-free device
● Please stop your car while talking over the phone, if it is possible.

Caution
Battery terminal may cause damage to conductor as well as a burn in human body, if contacted
The battery recharged shall be handled carefully and not to be carried in a bag with other metal goods.

· **5** ·

Explosion area
In a place didn't designated to use mobile phone or radio because of potential danger from explosion, please ensure to turn your mobile phone off to prevent any possible interference with explosion operation, and follow the instruction or signs.

Use of battery
Within an explosion area designated, do not unload, load or recharge the battery, but to follow the instructions or signs. In construction site, high frequency device is often used for the purpose of remote-controlled operations. In the area where potential gas leakage danger exists or chemicals storage or on deck of vessel, please refrain from loading mobile phone accessories or using mobile phone. Please ensure not to leave flammable material in the car where mobile phone accessories are equipped. The spark generated in dangerous area might cause a fire or explosion.

3. Display

Main Display
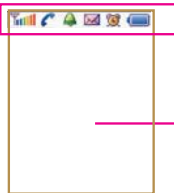

Indicates the phone number you entered, current status and available choices for functions.

Signal strength in calling areas: 📶 Weak signal 📶 Strong signal
📞 Appears when you try to make a call or the call is connected
📵 Service unavailable area
✉ Appears when a new text message is received
⏰ Appears when morning call or alarm is set up
△ International roaming service
Ring after vibration, Vibration after ring, Mute (Lamp),
Bell, Vibration, Etiquette Mode
Shows your battery level 🔋🔋🔋🔋

Sub Display
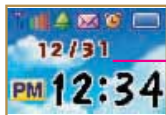

Shows digital clock

• Icon appears when you receive an incoming call or text message, or at the alarm time. Since the sub display shows only basic information, it may differ from the information shown in the main display.
• Press and hold the Volume button while the flip is closed to turn on the sub display backlight.
• Sub display does not show lock even if lock function is set.

---

4. How to Use Battery

❶ Inserting the Battery
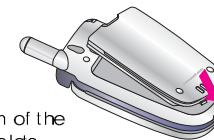

• Insert the bottom of the battery into the slots.
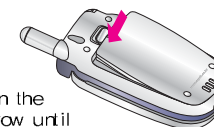

• Push the battery in the direction of the arrow until it clicks into place.

❷ Removing the Battery

• Pull the catch in the direction of the arrow.

• Lift the battery away in the direction of the arrow.

## 5. How to Charge the Battery

If you charge the battery while it is attached to your phone.

TTA licensed standard charger

• Make sure to charge the battery fully before using the phone for the first time after purchase, because it is not fully charged at purchase.

• Make sure to charge and keep the battery at room temperature.
• Install the charger where it is convenient for you to use.
• Separate the battery from the charger or unplug the charger if you have finished using it after the charging lamp turns green(charging completed).

What's TTA?

TTA (Telecommuications Technology Association) is a IT standards organization in South Korea.
It develops new standards and provides one-stop services for the establishment of IT standards as well as providing testing and certification for IT products.

Basic Operations

Explains the basic functions of the mobile phone.

Switching the Phone On/Off

❶ To Switch the Phone On

Press the End button.
· The following screen will appear after the animation when the phone is in service.

☞

Sub-display is switched on together with the phone. Sub-display shows strength of signal, alarm, battery level, message, current date and time.

❷ To Switch the Phone Off

Press and hold the End button.

※ Screen colors and images included in this Users' Manual may differ from actual ones.

---

❶ Press the Call button after entering the area code and phone number.
❷ Talk when the connection has been made.

· **When the connection is made:**
  You can hear the signal tone. Listen for this and then start to talk.
· **When no connection is made:**
  After the phone has attempted to redial 4 times, a warning message "Failed to make the call" will appear.
· **Automatic display of calling time**
  When connection to the station has been made, a call time will appear on the display.
  ....
  But the call fee is charged from the time you are connected to the other party.
