Object: Difference between QC25-WW and QC25-NA variants

Date: 2021-07-07

To those concerned,

Hereby, we would like to point out that the two variants mentioned above are completely identical (housing, PCBs and the parts assembled therein) except for the cellular radio.

- ➔ QC25-WW contains Telit ME910G1-WW radio (FCC ID R17ME910G1WW)
- ➔ QC25-NA contains Telit LE910-NA1 radio (FCC ID R17LE910NAV2)

Both radios use the same footprint on the PCB as both have an identical size and pinout.

Do not hesitate to contact me if you need more information.

Best Regards,

Benoit Beliveau, Eng.

Head of Electronic Development Department
