6. Move to FMT enable icon, and one question is displayed.  
Select to the “yes”.
7. ◀▶ icon displays on the audio mode.

### **\*\* Description of FM transmitter \*\***

This product is operated by 2.8V, 1.5V , 4.0V DC.

Built-in battery is provided to make an each voltage.

The built-in battery is charged by USB data cable connected to AC adaptor or P.C

The 2.8V DC is provided to CPU(core), NAND flash memory, LCD, FM tuner, earphone amplifier.

The 1.5V DC is provided to CPU(I/O).

The 4.0V DC is provided to LED, FM transmitter.

This 3.0V,1.5V DC drives MP3 file and transmits signal that is already decoded to CPU. And them CPU operates Modulator(BH1415F) to modulate the signal into FM signal.

The signal modulated is sent becoming electric wave through ANTENNA via filter which consisted of inductor and capacitor.
