**Our application for FCC approval, FCC Identifier SHXA733GSM-USA:  
Tune Up Info for Q2426 GSM-Module**

Dear Ladies and Gentlemen,

For radio communication purposes we have implemented the Wavecom Q2426 GSM modem into the above mentioned device. We have not made any changes to this modem whatsoever, but only connected it to our device's PCB through the standard connector provided by Wavecom. Said Wavecom modem has received it's own type approval in combination with the evaluation board provided by Wavecom, FCC Identifier O9EQ2426-SK.

Since said evaluation board is not used in our application a separate type approval is required. The Adcon A733 GSM, FCC ID SHXA733GSM-USA, does not apply any changes or modifications to this module neither in respect of it's hardware nor firmware nor the tune-up procedures.

We therefore kindly request your approval for our SHXA733GSM-USA RTU.

Best regards,

Bernhard Pacher  
Managing Director  
Adcon Telemetry GmbH
