RF Performance Test Report

Antenna Test Equipment Introduction

Test of antenna input characteristics using **Agilent E5071C** and **Agilent 5062A** vector network analyzer; The radiation pattern of the antenna are tested using the guangping 3D near field Anechoic Chamber, and the instrument is used to agilent8960 E5515 and Agilent E4438C. The test coordinates of the darkroom are as follows:

Install Wizard or Other

setup script:

Take 1 PCS of product, tear off the release paper on the back of the FPC by hand, and then align the FPC positioning hole position with the shell positioning hole position (positioning rib position or positioning line), and attach it flat to the shell, as shown in the following figure:

Installation process precautions:

- ☐ Ensure that the FPC is fully attached to the housing after pasting the antenna;
- ☐ Align the positioning hole with the position of the casing positioning column;
- ☐ Align FPC edge with shell edge;
- ☐ When attaching the terminal to the PCBA end of the motherboard, please first align the terminals and then snap them vertically;
- ☐ When disassembling antenna terminals, it is necessary to use a tool (such as a special pry bar) to vertically lift the terminals and not directly pull the wires for disassembly

Attach conductive sponge to the marked copper leakage area of the motherboard and ground it to the screen
