SUBJECT : OPERATIONAL DESCRIPTION OF KP1101/JR01

RE: REMOTE CONTROL DEVICE – FCC ID SJGKP1101JR01

To Whom It May Concern:

We have invented, developed, and now market and sell automated goaltenders that can be used to practice or play sports such as hockey, soccer, lacrosse, or field hockey. The KP1101 model is a hockey/soccer model and the JR01 is used for hockey and other sports like Lacrosse. In both models, a durable inflatable bag designed to replicate a goaltender stands atop a durable plastic base. This base moves back and forth on a fixed track positioned in front of the net. The base has a motor and gears and responds to LEFT/RIGHT and AUTO mode commands received from the remote control device.
