

## **Certification Test Report**

**FCC ID: SM6-LMXR  
IC: 9235A-LMXR**

**FCC Rule Part: 15.247  
IC Radio Standards Specification: RSS-247**

**ACS Report Number: 15-0147.W04.1A**

**Manufacturer: Mueller Systems, LLC  
Model: Repeater Plus Module**

**Test Begin Date: May 12, 2015  
Test End Date: May 29, 2015**

**Report Issue Date: June 15, 2015**

FOR THE SCOPE OF ACCREDITATION UNDER LAB Code 200612-0

This report is not be used to claim certification, approval, or endorsement by NVLAP, NIST or any government agency.

**Reviewed by:**

A handwritten signature in black ink, appearing to read 'Kirby Munroe', is positioned above the printed name.

## 1 GENERAL

### 1.1 Purpose

The purpose of this report is to demonstrate compliance with Part 15 Subpart C of the FCC's Code of Federal Regulations and Industry Canada's Radio Standards Specification RSS-247 Certification for a class II permissive change.

The purpose of this permissive change is to add two antennas, a new shield height, and output filter value changes to the originally certified 900MHz radio.

### 1.2 Product description

The Mueller Systems Repeater Plus Module is an ISM band 902 to 928 MHz transceiver module with a maximum output power of +30dBm used in a data collection system connected to a device such as a standard water meter register.

Technical Information:

The 2 modes of operation are detailed as follows. Only mode 1 is addressed in this report.

| Mode of Operation | Frequency Range (MHz)   | Number of Channels | Channel Separation (kHz) | Data Rates Supported (kbps) | Modulation |
|-------------------|-------------------------|--------------------|--------------------------|-----------------------------|------------|
| 1                 | 912.310059 - 927.012451 | 50                 | 300                      | 4557.3bps and 2604.2bps     | FHSS, DSSS |
| 2                 | 903.649963 - 915.725525 | 24                 | 525                      | 10416.7bps                  | DTS, DSSS  |

Antenna Type / Gain: Dipole / 6dBi (Antenna 1)  
Printed Inverted F Antenna / 4.8dBi (Antenna 2)  
1/2λ Monopole / 2.5dBi (Antenna 3)  
Whip / 5.0dBi (Antenna 4)

Operating Voltage: 3.6Vdc

Manufacturer Information:  
Mueller Systems, LLC  
1200 Abernathy Road, NE  
Suite 1200  
Atlanta, GA 30328

EUT Serial Number: 37000362

Test Sample Condition: The test samples were provided in good working order with no visible defects.

### **1.3 Test Methodology and Considerations**

All modes of operation, including all available data rates, were evaluated. The data presented in this report represents the worst case where applicable.

Preliminary measurements were performed and only those characteristics affected by the modifications were evaluated and reported. RF power output was provided for reference only.

For radiated emissions three orientations of the EUT were evaluated to determine worst case. The worst case orientation was determined to be the Y orientation.

AC power line conducted emissions was tested in a typical host.

Multiple antenna types are available for use with the EUT. The highest gain of each antenna type was evaluated for compliance.

Software power setting during test: TXP9=11, TXPS2=166

Software version number during test: LFM Release 4.0.8+FCCL

## **2 TEST FACILITIES**

### **2.1 Location**

The radiated and conducted emissions test sites are located at the following address:

Advanced Compliance Solutions  
5015 B.U. Bowman Drive  
Buford, GA 30518  
Phone: (770) 831-8048  
Fax: (770) 831-8598

### **2.2 Laboratory Accreditations/Recognitions/Certifications**

ACS is accredited to ISO/IEC 17025 by the National Institute of Standards and Technology under their National Voluntary Laboratory Accreditation Program (NVLAP), Lab Code 200612-0. Unless otherwise specified, all tests methods described within this report are covered under the ISO/IEC 17025 scope of accreditation.

The Semi-Anechoic Chamber Test Site, Open Area Test Site (OATS) and Conducted Emissions Site have been fully described, submitted to, and accepted by the FCC, Industry Canada and the Japanese Voluntary Control Council for Interference by information technology equipment.

FCC Registration Number: 511277

Industry Canada Lab Code: IC 4175A

VCCI Member Number: 1831

- VCCI OATS Registration Number R-1526
- VCCI Conducted Emissions Site Registration Number: C-1608

## 2.3 Radiated Emissions Test Site Description

### 2.3.1 Semi-Anechoic Chamber Test Site

The Semi-Anechoic Chamber Test Site consists of a 20' x 30' x 18' shielded enclosure. The chamber is lined with Toyo Ferrite Grid Absorber, model number FFG-1000. The ferrite tile grid is 101 x 101 x 19mm thick and weighs approximately 550 grams. These tiles are mounted on steel panels and installed directly on the inner walls of the chamber.

The turntable is 150cm in diameter and is located 160cm from the back wall of the chamber. The chamber is grounded via 1 – 8' copper ground rod, installed at the center of the back wall, it is bound to the ground plane using 3/4" stainless steel braided cable.

The turntable is all steel, flush mounted table installed in an all steel frame. The table is remotely operated from inside the control room located 25' from the range. The turntable is electrically bonded to the surrounding ground plane via steel fingers installed on the edge of the turn table. The steel fingers make constant contact with the ground plane during operation.

Behind the turntable is a 3' x 6' x 4' deep shielded pit used for support equipment if necessary. The pit is equipped with 1 – 4" PVC chases from the turntable to the pit that allow for cabling to the EUT if necessary. The underside of the turntable can be accessed from the pit so cables can be supplied to the EUT from the pit.

A diagram of the Semi-Anechoic Chamber Test Site is shown in Figure 2.3-1 below:

Figure 2.3-1: Semi-Anechoic Chamber Test Site

### 2.3.2 Open Area Tests Site (OATS)

The open area test site consists of a 40' x 66' concrete pad covered with a perforated electro-plated galvanized sheet metal. The perforations in the sheet metal are 1/8" holes that are staggered every 3/16". The individual sheets are placed to overlap each other by 1/4" and are riveted together to provide a continuous seam. Rivets are spaced every 3" in a 3 x 20 meter perimeter around the antenna mast and EUT area. Rivets in the remaining area are spaced as necessary to properly secure the ground plane and maintain the electrical continuity.

The entire ground plane extends 12' beyond the turntable edge and 16' beyond the antenna mast when set to a 10 meter measurement distance. The ground plane is grounded via 4 – 8' copper ground rods, each installed at a corner of the ground plane and bound to the ground plane using 3/4" stainless steel braided cable.

The turntable is an all aluminum 10' flush mounted table installed in an all aluminum frame. The table is remotely operated from inside the control room located 40' from the range. The turntable is electrically bonded to the surrounding ground plane via steel fingers installed on the edge of the turn table. The steel fingers make constant contact with the ground plane during operation.

Adjacent to the turntable is a 7' x 7' square and 4' deep concrete pit used for support equipment if necessary. The pit is equipped with 5 – 4" PVC chases from the pit to the control room that allow for cabling to the EUT if necessary. The underside of the turntable can be accessed from the pit so cables can be supplied to the EUT from the pit. The pit is covered with 2 sheets of 1/4" diamond style re-enforced steel sheets. The sheets are painted to match the perforated steel ground plane; however the underside edges have been masked off to maintain the electrical continuity of the ground plane. All reflecting objects are located outside of the ellipse defined in ANSI C63.4.

A diagram of the Open Area Test Site is shown in Figure 2.3-2 below:

Figure 2.3-2: Open Area Test Site

## 2.4 Conducted Emissions Test Site Description

The AC mains conducted EMI site is located in the main EMC lab. It consists of an 8' x 8' solid aluminum horizontal ground reference plane (GRP) bonded every 3" to an 8' X 8' vertical ground plane.

The site is of sufficient size to test table top and floor standing equipment in accordance with section 6.1.4 of ANSI C63.4.

A diagram of the room is shown below in figure 2.4-1:

Figure 2.4-1: AC Mains Conducted EMI Site

## 6 EQUIPMENT UNDER TEST SETUP BLOCK DIAGRAM

**Figure 6-1: Test Setup Block Diagram**

## 7 SUMMARY OF TESTS

Along with the tabular data shown below, plots were taken of all signals deemed important enough to document.

### 7.1 Antenna Requirement – FCC: Section 15.203

The antennas used are a Dipole with 6dBi gain, Printed Inverted F Antenna with 4.8dBi gain, 1/2λ monopole with 2.5dBi gain, and a Whip with 5dBi gain. These antennas are detachable utilizing MMCX coupling to the EUT, therefore satisfying the requirements of Section 15.203.

### 7.2 Power Line Conducted Emissions – FCC 15.207, IC: RSS-Gen 8.8

#### 7.2.1 Measurement Procedure

ANSI C63.4 sections 6 and 7 were the guiding documents for this evaluation. Conducted emissions were performed from 150kHz to 30MHz with the spectrum analyzer's resolution bandwidth set to 9kHz and the video bandwidth set to 30kHz. The calculation for the conducted emissions is as follows:

**Corrected Reading = Analyzer Reading + LISN Loss + Cable Loss**

**Margin = Applicable Limit - Corrected Reading**

#### 7.2.2 Measurement Results

**Table 7.2.2-1: Conducted EMI Results Line 1 – Antenna 1**

| Frequency (MHz) | Corrected Reading |                | Limit (dBuV) | Margin (dB) | Line | Correction (dB) |
|-----------------|-------------------|----------------|--------------|-------------|------|-----------------|
|                 | Quasi-Peak (dBuV) | Average (dBuV) |              |             |      |                 |
| 0.190570        | ---               | 31.47          | 53.85        | 22.38       | L1   | 10.1            |
| 0.190570        | 42.02             | ---            | 63.88        | 21.86       | L1   | 10.1            |

**7.3 Peak Output Power - FCC 15.247(b)(2) IC: RSS-247 5.4(1)****7.3.1 Measurement Procedure (Conducted Method)**

The RF output port of the EUT was directly connected to the input of a peak power meter with suitable attenuation. The device employs  $\geq 50$  channels therefore the power is limited to 1 Watt.

All data rates were evaluated and worst case reported.

**7.3.2 Measurement Results****Table 7.3.2-1: RF Output Power**

## 7.4 Radiated Spurious Emissions - FCC 15.205, 15.209; RSS-Gen 8.9/8.10

### 7.4.1.1 Measurement Procedure

Radiated emissions tests were made over the frequency range of 30MHz to 10GHz, 10 times the highest fundamental frequency.

The EUT was rotated through 360° and the receive antenna height was varied from 1m to 4m so that the maximum radiated emissions level would be detected. For frequencies below 1000MHz, quasi-peak measurements were made using a resolution bandwidth RBW of 120 kHz and a video bandwidth VBW of 300 kHz. For frequencies above 1000MHz, peak and average measurements were made with RBW and VBW of 1 MHz and 3MHz respectively.

The EUT was caused to generate a continuous modulated carrier on the hopping channel.

Each emission found to be in a restricted band was compared to the applicable radiated emission limits.

Radiated spurious emissions were evaluated for all data rates with worst case data provided.

**7.4.1.3 Sample Calculation:**

$$R_C = R_U + CF_T$$

Where:

- $CF_T$  = Total Correction Factor (AF+CA+AG)-DC (Average Measurements Only)  
 $R_U$  = Uncorrected Reading  
 $R_C$  = Corrected Level  
AF = Antenna Factor  
CA = Cable Attenuation  
AG = Amplifier Gain  
DC = Duty Cycle Correction Factor

**Example Calculation: Peak (Antenna 1)**Corrected Level:  $52.87 - 4.44 = 48.43\text{dBuV/m}$ Margin:  $74\text{dBuV/m} - 48.43\text{dBuV/m} = 25.6\text{dB}$ **Example Calculation: Average (Antenna 1)**Corrected Level:  $47.70 - 4.44 - 0 = 43.26\text{dBuV}$ Margin:  $54\text{dBuV} - 43.26\text{dBuV} = 10.7\text{dB}$ **8 CONCLUSION**

In the opinion of ACS, Inc. the Repeater Plus Module, manufactured by Mueller Systems, LLC meets the requirements of FCC Part 15 subpart C and Industry Canada's Radio Standards Specification RSS-247.
