Page 1 of 21**TEST REPORT**

Application No.:	SHEM1303000381PF
Applicant:	Wintop International industrial Co.Ltd
FCC ID:	SM8RA11
Equipment Under Test (EUT):	
NOTE: The following sample(s) submitted was/were identified on behalf of the client as	
Product Name:	iSensor
Brand Name:	Wintop
Model:	RA11
Added Model:	N/A
Standards:	FCC PART 15 Subpart C Section 15.249: 2012
Date of Receipt:	Mar.18, 2013
Date of Test:	Mar.19, 2013 to Apr.01, 2013
Date of Issue:	Apr.07, 2013
Test Result :	PASS *

. * In the configuration tested, the EUT complied with the standards specified above.

Apr. 2013

Tony Wu
E&E Section Manager

SGS-CSTC (Shanghai) Co., Ltd.

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. All test results in this report can be traceable to National or International Standards.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at www.sgs.com/terms_and_conditions.htm and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at www.sgs.com/terms_e-document.htm. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only.

5 General Information

5.1 Client Information

Applicant:	Wintop International industrial Co.Ltd
Address of Applicant:	No.1301, Xinfei Road, Songjiang District Shanghai, China
Manufacturer:	Wintop International industrial Co.Ltd
Address of Manufacturer:	No.1301, Xinfei Road, Songjiang District Shanghai, China
Factory:	Wintop International industrial Co.Ltd

5.2 General Description of EUT

Product Name:	iSensor
Model No.(EUT):	RA11
Trade Mark:	Wintop
Add Model No.:	N/A
Product Description:	Wireless sensor

5.3 Technical Specifications:

Operation Frequency:	908.42MHz/1Channel
Modulation Technique:	GFSK
Power Supply:	3V DC(the New Alkaline Battery(AA*2) is used during the test)
Antenna Type	Integral
Antenna Gain	2.01dBi

5.4 Support equipments for Testing

The EUT has been tested independently.

5.5 Details of Test Mode

Test Mode	Description of Test Mode
Transmitting mode:	Keep the EUT on continuous transmitting mode

5.6 Test Location

All tests were performed at:

SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd.
No.588 West Jindu Road, Songjiang District, Shanghai, China.201612.

Tel: +86 21 6191 5666 Fax: +86 21 6191 5678

5.7 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

- **CNAS (No. CNAS L0599)**

CNAS has accredited SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing. Date of expiry: 2014-07-26.

- **FCC – Registration No.: 402683**

SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. has been registered and fully described in a report filed with the Federal Communications Commission (FCC). The acceptance letter from the FCC is maintained in our files. Registration No.: 402683, Expiry Date: 2015-02-22.

- **Industry Canada (IC) – IC Assigned Code: 8617A**

The 3m Semi-anechoic chamber of SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 8617A. Expiry Date: 2014-09-20.

- **VCCI (Member No.: 3061)**

The 3m Semi-anechoic chamber and Shielded Room of SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. has been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: R-3868 and C-4336 respectively. Date of Registration: 2012-05-29. Date of Expiry: 2015-05-28.

5.8 Deviation from Standards

None.

5.9 Abnormalities from Standard Conditions

None.

5.10 Other Information Requested by the Customer

None.

6 Test results and Measurement Data

6.1 Antenna Requirement

Standard requirement:	47 CFR Part 15C Section 15.203
15.203 requirement:	An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.
EUT Antenna:	Integral antenna
The antenna is integrated on the main PCB and no consideration of replacement. The best case gain of the antenna is 2.01dBi.	

6.2 Conducted Emissions

Test Requirement:	47 CFR Part 15C Section 15.207		
Test Method:	ANSI C63.10: 2009		
Test Frequency Range:	150KHz to 30MHz		
Limit:	Frequency range (MHz)	Limit (dBuV)	
		Quasi-peak	Average
	0.15-0.5	66 to 56*	56 to 46*
	0.5-5	56	46
	5-30	60	50
* Decreases with the logarithm of the frequency.			
Test Procedure:	<ol style="list-style-type: none">1) The mains terminal disturbance voltage test was conducted in a shielded room.2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a $50\Omega/50\mu\text{H} + 5\Omega$ linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane,4) The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10: 2009 on conducted measurement.		

Test Setup:	
Instruments Used:	Refer to section 5.12 for details
Test Mode:	N/A
Test Results:	N/A

Measurement Data:

Note: Due to this EUT is powered by the battery only, this test item is not applicable.

6.3 Field Strength of the Fundamental Signal

Test Requirement:	47 CFR Part 15C Section 15.249 and 15.209				
Test Method:	ANSI C63.10: 2009				
Test Site:	Measurement Distance: 3m (Semi-Anechoic Chamber)				
Receiver Setup:	Frequency	Detector	RBW	VBW	Remark
	30MHz-1GHz	Quasi-peak	100 kHz	300KHz	Quasi-peak
	Above 1GHz	Peak	1MHz	3MHz	Peak
Limit:	Frequency	Limit (dBuV/m @3m)		Remark	
	902MHz~928MHz	94.0		Average Value	
		114.0		Peak Value	
Test Setup:					

Figure 1. 30MHz to 1GHz

Figure 2. Above 1 GHz

Test Procedure:	<ol style="list-style-type: none"> The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet. Test the EUT in the lowest channel, the middle channel, the Highest channel
-----------------	--

	h. The radiation measurements are performed in X, Y, Z axis positioning. And found the X axis positioning which it is worse case, Only the test worst case mode is recorded in the report. i. Repeat above procedures until all frequencies measured was complete.
Instruments Used:	Refer to section 5.12 for details
Test Mode:	Sensor mode
Test Results:	Pass

7	908.42	N/A	N/A	N/A	N/A	N/A	N/A	N/A		fundamental signal

Note: 1. Result Level = Read Level + Antenna Factor + Cable loss - Preamp Factor

2. If Peak Result comply with QP limit, QP Result is deemed to comply with QP limit

1GHz - 10GHz

Test mode:	Transmitting mode	Test channel:	908MHz	Remark:	Peak	
Frequency (MHz)	Factor (dB)	Read Level (dBuV)	Level (dBuV/m)	Limit Line (dBuV/m)	Over Limit (dB)	Polarization
1599.25	-10.29	49.28	38.99	54	-15.01	Vertical
2128.00	-6.94	46.06	39.12	54	-14.88	Vertical
3185.50	-4.68	45.48	40.8	54	-13.2	Vertical
7533.00	7.73	40.11	47.84	54	-6.16	Vertical
9577.50	11.79	38.17	49.96	54	-4.04	Vertical
11316.50	9.47	40.11	49.58	54	-4.42	Vertical
1587.50	-10.39	45.95	35.56	54	-18.44	Horizontal
2985.75	-5.23	47.41	42.18	54	-11.82	Horizontal
7568.25	7.73	40.13	47.86	54	-6.14	Horizontal
9460.00	11.75	39.07	50.82	54	-3.18	Horizontal
12033.25	8.77	41.54	50.31	54	-3.69	Horizontal

Remark:

- 1) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

$$\text{Final Test Level} = \text{Receiver Reading} + \text{Factor}(\text{Antenna Factor} + \text{Cable Factor} - \text{Preamplifier Factor})$$
- 2) The disturbance below 30MHz was very low, and the above harmonics were the highest point could be found when testing, so only the above harmonics had been displayed.

6.5 20dB Bandwidth

Test Requirement:	47 CFR Part 15C Section 15.215	
Test Method:	ANSI C63.10:2009	
Test Setup:		
Instruments Used:	Refer to section 5.12 for details	
Test mode:	Sensor	
Limit:	N/A	
Test Results:	Pass	

Measurement Data

Test channel	20dB bandwidth (kHz)	Results
908.42MHz	83.00	Pass

Test plot as follows:

4 Test Setup Photographs

Refer to the < iSensor Test Setup photos >.

5 EUT Constructional Details

Refer to the < iSensor External Photos > & < iSensor Internal Photos >.
