Dear Helen,

We always appreciate your kind cooperations on our TCB applications.

We checked your Question and here's the answer.

Question #1: The device is working with TX FCC ID: SR3WCS-211, operating at frequency 311.061 MHz, please explain why radiated emission was investigated upto 1GHz only.

Answer : Please see the revise test report page 14(NOTES 3.) of the test report.

We already retested up to 2GHz, and no significant emission was found.

Thank you & Best Regards

CHA
