Matrice 30

The MATRICE™ 30 (M30/M30T) is a powerful industrial drone platform with an advanced flight controller system, 6 Directional Sensing and Positioning system and FPV camera*. It features several advanced flight functions including return-to-home, obstacle sensing, AI spot-check and more. Equipped with a gimbal and camera, while the high-precision three-axis gimbal increases stability, and the DJI Pilot App can be used to observe the real-time view from the camera, and take pictures and videos. The built-in AirSense provides awareness of nearby aircraft within the surrounding airspace to ensure safety. The Matrice 30 has a built-in DJITM D-RTK™ 2, which provides more accurate heading data for positioning. An advanced power management system along with dual batteries ensures power supply and enhances flight safety. Without a payload, the Matrice 30 has a flight time of up to 41 minutes. **

Its airframe design gives it an IP55 Ingress Protection, in accordance with the global IEC 60529 standard. The mechanical design, along with mounted folding arms, makes it easy to transport, store, and prepare for flight. The safety beacons on both the top and the bottom of the aircraft allow the aircraft to be identified at night or in low light conditions. The auxiliary lights help the vision positioning system achieve better performance at night or in low light conditions, improving aircraft takeoff, landing and flight safety. It is equipped with an expansion port to broaden its applications.

Using Matrice 30 Series

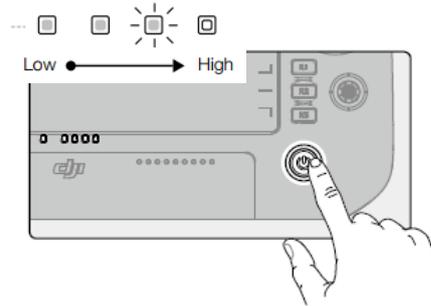

1. Charging the Batteries

DJI RC Pro

	<p>The remote controller needs to be activated before using for the first time. An internet connection is required for activation. Follow the prompts to activate.</p> <p>The internal battery is placed in hibernation mode before delivery. It must be charged before using for the first time. The battery level LEDs starting to flash indicates that the activation of the built-in battery has been completed. It can only be charged to 60% battery before the remote controller activated.</p>
	
<ol style="list-style-type: none"> 1. Use the AC power cable to connect the BS30 battery station to a power outlet. 2. Press the power button once to power on the battery station. 3. Connect the battery station firmware update port to the remote controller USB-A port using a USB-C cable. It takes approximate 2 hours to fully charge the remote controller internal battery. 	
	<p>It is recommended to use the official battery station for charging, otherwise, use a local certified USB-C charger at maximum rated power of 65W and maximum voltage of 20V such as the DJI 65W Portable Charger.</p> <p>Fully discharge and charge the remote controller every three months. The battery depletes when stored for an extended period.</p>

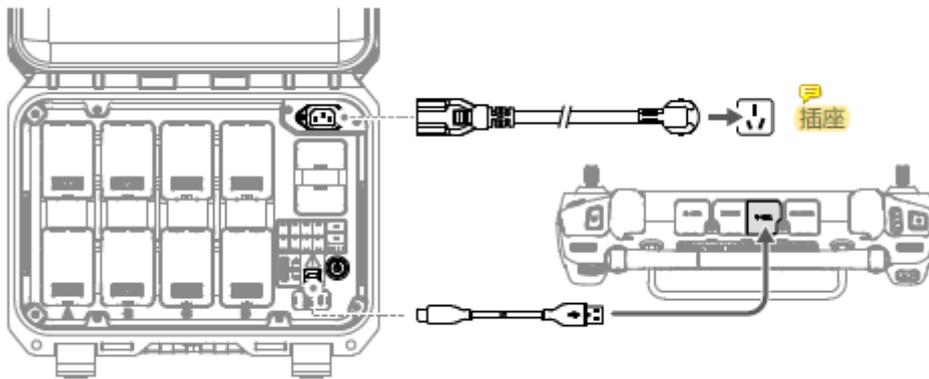

Checking the Battery Level and Turning On/Off

Check battery level: press once.
 Power on/off: press and then press and hold.

 Please refer to the user manual for more information about checking the internal and external battery levels.

TB30 Intelligent Flight Battery and WB37 Intelligent Battery

The battery station must be connected to the remote control via the firmware upgrade port using a USB-C cable for activation for the first time of usage.

1. Use the AC power cable to connect the BS30 battery station to a power outlet.
2. Press the power button once to power on the battery station.
3. The BS30 battery station needs to be activated for the first time of charging the TB30 and the WB37 batteries. Connect the battery station firmware update port to the remote controller USB-A port using a USB-C cable. Use the DJI Pilot app and follow the instructions to complete activation.
4. Insert the batteries into the battery ports to start charging.

	When the temperature of the TB30 intelligent flight battery is too low, it will warm up automatically before charging.
	Refer to the Battery Station User Guide for more information about the various LEDs.

2. Preparing the DJI RC Plus

Mounting the WB37 Intelligent Battery

1. Press the battery compartment release button on the back of the remote controller down to open the cover.
2. Insert the WB37 Intelligent Battery into the battery compartment and push it to the top.
3. Close the cover.

To remove the Intelligent Battery, press and hold the battery release button and push the battery downward.

Mounting the 4G Dongle and SIM Card

- Only use a DJI-approved dongle (e.g. LTE USB Modem of IG830 model).
- The dongle and nano-SIM card enable the remote controller to access 4G network. Make sure to deploy these correctly, otherwise, network access will not be available.
- The dongle and nano-SIM card are excluded.

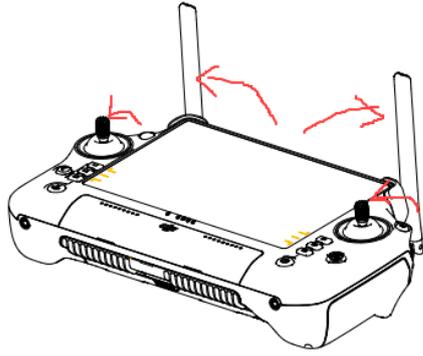

1. Open the dongle compartment cover.
2. Insert the dongle into the USB port with the nano-SIM card inserted into the dongle.
3. Close the cover firmly.
4. Check the 4G grid icon in DJI Pilot App. If the signal is normal, it means that the dongle and nano-SIM card can work properly.

USB-2 port is recommended for better heat dissipation.

Adjusting the Antennas

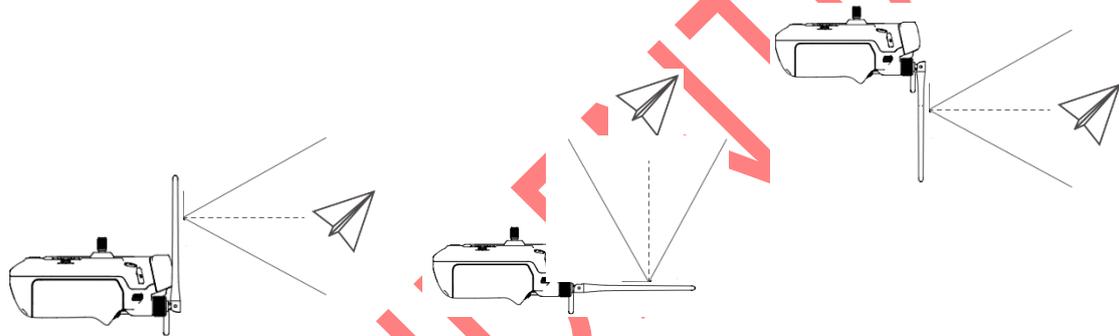

Unfolded the control sticks. Lift the antennas and adjust them. The strength of the remote controller signal is affected by the position of the antennas.

When the angle between the antennas and the touchscreen of the remote controller is 90° , 180° or 270° the connection between the remote controller and aircraft can reach its optimal performance.

Optimal Transmission Zone

Try to keep the aircraft inside the optimal transmission zone. If the signal is weak, adjust the antennas or fly the aircraft closer.

In real operation, the app will issue a prompt to warn that the transmission signal is weak, and please adjust the antennas to ensure that the aircraft is back to the optimal transmission range.

3. Preparing the Aircraft

Unfolding the Aircraft

1. Unfold the frame arms on both sides in the same way. Make sure the frame arm folding buttons pop out so that the frame arms are locked firmly.
2. Unfold the propellers.

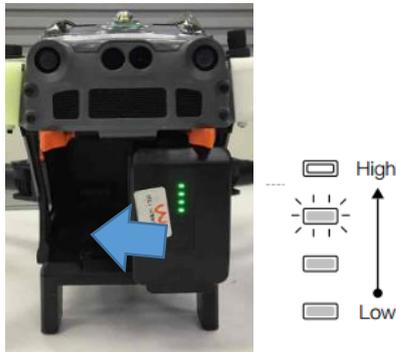

To fold the frame arm, press and hold the frame arm folding button.

Mounting the Intelligent Flight Batteries / Checking the Battery Level

Insert a pair of batteries.

Press the battery level button once to check the battery level

Turning On the Aircraft

Turn on / off: Press the power button on the aircraft, within 3 seconds press again and hold to turn on / off the aircraft, with the power indicator solid on.

Link: Press and hold the aircraft's power button at least five seconds to link the aircraft and remote controller.

The power indicator will blink during linking.

4. Getting Ready for Takeoff

- Place the aircraft on open, flat ground with the rear of the aircraft facing toward you.
- Make sure that the propellers are securely mounted, there are no foreign objects in or on the motors and propellers, the propeller blades and arms are unfolded, and the arm locks are firmly fastened.
- Make sure that the intelligent flight batteries are firmly in place.
- Power on the remote controller, make sure that the DJI Pilot app is open, and power on the aircraft.
- Follow the instructions in DJI Pilot App to perform pre-flight inspections.

When using for the first time, activate the aircraft using the DJI Pilot app. A DJI account and internet connection are required.

5. Flight

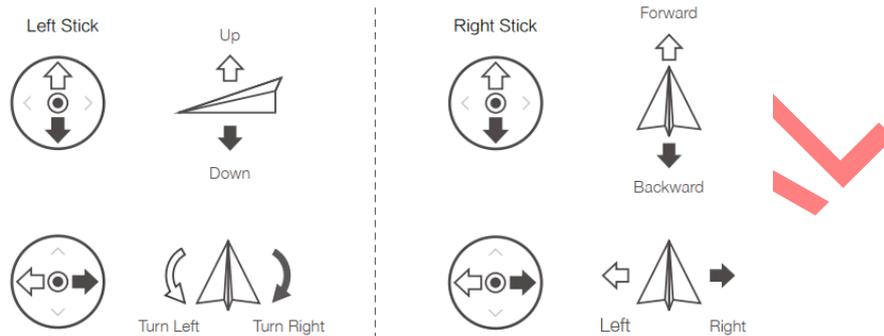

Before taking off, make sure the Aircraft Status Bar in the DJI Pilot app displays "Ready to Go (GPS)" or "Ready to Go (RTK)".

Ready to Go (GPS)

Manual Takeoff / Landing

Combination Stick Command to start / stop the motors.			
	Slowly push the left stick up to take off. (Mode 2)		Slowly push the left stick down until the aircraft lands. Hold for a few seconds to stop the motors.

The default flight control is known as Mode 2. The left stick controls the aircraft's altitude and heading, while the right stick controls its forward, backward, and left and right movements.

	Refer to the Matrice 30 User Manual for more information about features and applications.
	The motors can only be stopped mid-flight when the flight controller detects a critical error. Be sure the remote controller is linked to the aircraft.
