1 For some reason, within the RF test report and other exhibits for the transmit operational frequency ranges do not agree each other. For instance, the tested frequencies in the RF test report indicates 470.5MHz to 697.5 MHz, however, all other exhibits (block diagram and Theory of Operation) states 482MHz to 608MHz range. Please verify and correct the related information as necessary.)

[Sytonics - Please see updated Block Diagram, theory of operation and user guide.](#)
