

## Operation Description

RL-0506A: it is a six-direction alarm system, ideal for house, shop, warehouse etc.

The remote control signal can be transferred to receiver in 433.92Mhz AM modulation.

MOD signal is from IC1 and output from No. 17 of IC1 in way of ASK, then modulated into 433.92MHZ and transmitted via C1 and L2. SW and JK control the circuit.

The transmission antenna is soldered on the PCB directly.

The super generations type receiver was used. An external excitation was used when the test of receiver was performed.
