

KC-0418 logic drawing

description:

1. audio input be dealt the impedance, then it be sent to 4148 transmitter module. The transmitter module transmit the FM any one signal form 88.1 to 107.9 according require of the transmitter controller. The audio signal be transmitted via the transmit antenna.
2. power input 2.5v
3. operation key, operating the transmit the transmit frequency and memory the frequency.
