

- 1.) Kindly discuss how this device was tested and found to comply with the limits with the limits for devices with a periodic rate of less than 20Hz. Please see 15.35(a), especially the "Note:" which applies to this rule section.

Modification: To change C<sub>101</sub> capacitor from 1.5PF to 3.3PF.

The revised Test report with new test data downloaded to web site.

- 2.) You have requested the two-part statement of 15.19(a)(3) be moved from the device to the blister pack. This is not allowed. It is permissible because of the small size to move this statement to the Manual, but there are no provisions in the Rules which would allow this to be placed on the packaging.

The revised Manual downloaded to web site.

- 3.) The antenna seems to be a simple wire easily accessible by the consumer and easily changed. Kindly explain how this antenna meets the requirements of 15.203. In addition, since this antenna is easily formed into any shape, please discuss what steps were taken to maximize emissions not only for the fundamental but also the harmonics.

The sample without outer antenna, it is a simple wire for consumer to hang only.

- 4.) Please confirm that no Confidentiality shall be included with any of the submitted exhibits uploaded to the FCC website.
