

## USER'S MANUAL INFORMATION

The installation of this antenna equipment may create the opportunity for exposure to levels higher than recommended for the general population at a distance less than 282 cm from the center of the antenna. The following precautions must be taken during installation of this equipment:

The installed antenna must not be located in a manner that allows exposure of the general population to the direct beam path of the antenna at a distance less than 282 cm. Installation on towers, masts, or rooftops not accessible to the general population is recommended; or

Licensees are required to attach a label to transceiver antennas that:

(1) provides adequate notice regarding potential radiofrequency safety hazards, e.g., information regarding the safe minimum separation distance required between users and transceiver antennas; and (2) references the applicable FCC-adopted limits for radiofrequency exposure specified in § 1.1310.

During antenna installation, be sure that power to the ELVA-1 equipment is turned off in order to prevent the presence of microwave energy on the coaxial connector.

During installation and alignment of the antenna, do not stand in front of the antenna assembly.

During installation and alignment of the antenna, do not handle or touch the front of the antenna.
