

### Declaration of product

"We E26 Limited, the applicant of model R2811 declare that the dual mode phone works only one mode at a time. That mean: when it is being connected to the VoIP call, it will not be activated by a GSM incoming call at the same moment. The operation characteristic as below:

- 1) VoIP is established – When VoIP is established, the GSM module is still on and it is able to receive RING message from GSM. However, if RING receives, the phone will reject the call automatically as VoIP call is on.
- 2) GSM call is established – When GSM call is established, the phone can receive SIP call request. However, when this request is received, the phone will reject the call automatically as GSM call is on."

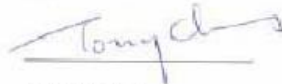

Sincerely yours,
