

Date: July 25th, 2024

Class Permissive Change request letter

Manufacturer: Harman Becker Automotive Systems GmbH

Model: TKCMOD12N00

FCC ID: T8GCONMOD

We, Harman Becker Automotive Systems GmbH., pursuant FCC §2.1043, hereby request the evaluation of a Class 2 Permissive Change as described below for the device mentioned above.

The changes made to the currently certified model are only related to improvement of the device and enabling MIMO functionality on the already certified WiFi 5 GHz in SISO mode, using the existing antennas and ports already considered. These changes do not degrade the characteristics currently reported and accepted for the host.

The device still continues working in portable conditions and SAR testing has been updated. No changes to modulation or frequency have been made.

All non-US bands will be inoperable when operated in the United States.

All the working modes, frequencies and antennas distribution are explained in the Operational Description.

Yours sincerely,

By: Simon Voegelé
