7. TEST CASE RESULTS

7.1. Registration Process Test Cases for Domain Proxy UUT

7.1.1. Domain Proxy Multi-Step Registration for CBSD with CPI signed data

Section	CBSD	Domain Proxy (DP)	Required for Cert.	Test Case ID
6.1.4.1.6	-	X	C3	WINNF.FT.D.REG.6
Purpose	Validates that each of the required and REG-Conditional parameters appear within the registration request message. This test is for devices where the CPI enters data into the CBSD and this information along with the CPI signature are sent in the request message..			

Procedures:

1. Ensure following conditions are met for test entry:
 - a. UUT has successfully completed SAS Discovery and Authentication with the SAS Test Harness
 - b. UUT is in Unregistered state
 - c. All of the required and REG-Conditional paramters shall be configured and CPI signature provided
2. DP with two CBSD sends correct Registration request information to the SAS Test Harness:
 - a. The required userId, fcclid and cbsdSerialNumber and REG-Conditional cbsdCategory, airInterface, installationParam, and measCapability registration parameters shall be sent from the CBSD and conform to proper format and acceptable ranges.
 - b. **Mark PASS or FAIL for RESULTS.**
3. SAS Test Harness sends a CBSD Registration Response as follows:
 - a. cbsdId=Ci
 - b. measReportConfig for each CBSD shall not be included
 - c. responseCode = 0 for each CBSD
4. SAS Test Harness will not provide any positive response (responseCode=0) to further request messages from the UUT
5. Monitor the RF output of the UUT from start of test until 60 seconds after Step 3 is complete.
6. Verify UUT does not transmit RF
 - a. **Mark PASS or FAIL for RESULTS.**

Notes: If a waiver for the measurement capability has been obtained from the FCC for the CBSD, the WINNF.FT.D.REG.6 waiver test case shall be executed which is the same as above, but where measCapability is not required in the request message.

Results:

Criteria	Results	
CBSDs sends correct Registration request information to the SAS Test Harness:	☒ PASS	☐ FAIL

 - a. Each UUT has successfully SAS Discovery and Authentication with SAS Test Harness
 - b. Each UUT has successfully registered with SAS Test Harness, with cbsdId = C
 - c. Each UUT is authorized state
 - d. DP has received a valid grant with grandId = G
 - e. Both CBSD are in Grant State AUTHORIZED and is actively transmitting within the bounds of their grants
 - f. Invoke trigger to relinquish UUT Grant from the SAS Test Harness
 2. UUT sends a Relinquishment request and receives a responseCode = 0
 3. DP sends Deregistration Request to SAS Test Harness with cbsdId = C
 - a. **MARK as PASS OR FAIL for RESULTS**
 4. SAS Test Harness shall approve the request with a Deregistration Response message with parameters:
 - a. cbsdId = Ci
 - b. responseCode = 0
 5. After completion of step 3, SAS Test Harness will not provide responseCode = 0
 6. Monitor RF output of each UUT from start of test until 60 seconds after Step 4 is complete.
- Verify :
- a. UUT stopped RF transmission at any time between triggering deregistration AND either A OR B occurs:
 - i. UUT sending Registration Request message
 - ii. UUT sending a Deregistration Request message
 - b. **MARK as PASS OR FAIL for RESULTS**

Results:

Criteria	Results	
DP sends Deregistration Request to SAS Test Harness with cbsdID = C	☒ PASS	☐ FAIL
Monitor RF output of UUT from start of test until 60 seconds and verify UUT stops RF transmission any time between triggering deregistration and when UUT sending Registration Request message or UUT sending a Deregistration Request message	☒ PASS	☐ FAIL

7.8. CBSD Security Validation

Definition

- These test cases demonstrate the conformance of the CBSD Security Establishment Procedure

Initial Conditions / Test Pre-conditions

- CBSD has gone through SAS discovery process.
- Test certificates are loaded on CBSD as well as on the SAS Test Harness

7.8.1. Successful TLS Connection Between UUT and SAS Test Harness

Section	CBSD	Domain Proxy (DP)	Required for Cert.	Test Case ID
6.8.4.1.1	X	X	M	WINNF.FT.C.SCS.1
Purpose	Test cases determine UUT conforms in TLS connection between SAS Test Harness and CBS D			

Procedures

1. UUT shall start CBS D-SAS communication with the security procedure
 - a. The UUT shall establish a TLS handshake with the SAS Test Harness using the configured certificate
 - b. Configure SAS Test Harness to accept the security procedure and establish the connection.
 - c. **MARK as PASS OR FAIL for RESULTS**
2. Make sure Mutual authentication happens between UUT and the SAS Test Harness
 - a. Make sure that UUT uses TLS v1.2
 - b. Make sure that cipher suits from one of the following is selected:
 - i. TLS_RSA_WITH_AES_128_GCM_SHA256
 - ii. TLS_RSA_WITH_AES_256_GCM_SHA384
 - iii. TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256
 - iv. TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384
 - v. TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256
 - c. **MARK as PASS OR FAIL for RESULTS**
3. Successful registration is accomplished using one of the test cases described in section 6.1.4.1, depending on CBS D capability
 - a. UUT sends a registration request to the SAS Test Harness and the SAS Test Harness sends a Registration Response with responseCode = 0 and cbsdId
 - b. **MARK as PASS OR FAIL for RESULTS**
 - c. Monitor the RF output of the UUT from start of test until 60seconds after Step 3 is complete. Verify that UUT shall not transmit RF
 - d. **MARK as PASS OR FAIL for RESULTS**

Results:

Criteria	Results	
Configure SAS Test Harness to accept the security procedure and establish the connection	☒ PASS	☐ FAIL
Make sure Mutual authentication happens between UUT and the SAS Test Harness. UUT uses TLS v1.2 and has one of the cipher suites from Step 2 selected.	☒ PASS	☐ FAIL
UUT sends a registration request to the SAS Test Harness and the SAS Test Harness sends a Registration Response with responseCode = 0 and cbsId	☒ PASS	☐ FAIL
Monitor the RF output of the UUT from start of test until 60seconds after Step 3 is complete. Verify that UUT shall not transmit RF	☒ PASS	☐ FAIL

7.8.3. TLS Failure Due to Expired Server Certificate

Section	CBSD	Domain Proxy (DP)	Required for Cert.	Test Case ID
6.8.4.2.2	X	X	M	WINNF.FT.C.SCS.3
Purpose	Test cases determine UUT conforms in TLS connection between SAS Test Harness and CBSD			

Pre-requisite: Configure SAS Test Harness such that server certificate is valid but expired

Procedures

1. UUT shall start CBSD-SAS communication with the security procedure
 - a. **MARK as PASS OR FAIL for RESULTS**
2. Make sure UUT uses TLS v1.2 for security establishment
 - a. Make sure UUT selects correct cipher suite
 - b. UUT shall use CRL or OCSP to verify the validity of the server certificate.
 - c. Make sure that Mutual authentication does NOT happens between UUT and the SAS Test Harness
 - d. **MARK as PASS OR FAIL for RESULTS**
3. UUT may retry for the security procedure which shall fail
 - a. **MARK as PASS OR FAIL for RESULTS**
4. SAS Test Harness shall not receive any Registration request
5. Monitor the RF output of the UUT from start of test until 60seconds after Step 3 is complete.
Verify that UUT shall not transmit RF
 - a. **MARK as PASS OR FAIL for RESULTS**

Results:

Criteria	Results	
Configure SAS Test Harness to accept the security procedure and establish the connection	☒ PASS	☐ FAIL
Make sure Mutual authentication happens between UUT and the SAS Test Harness. UUT uses TLS v1.2 and has correct cipher suites selected.	☒ PASS	☐ FAIL

Purpose	Test cases determine UUT conforms in TLS connection between SAS Test Harness and CBSD			

Pre-requisite: Equip the SAS Test Harness with certificate signed by an unknown CA to the CBSD.

Procedures

 - c. Make sure that Mutual authentication does NOT happens between UUT and the SAS Test Harness
 - d. **MARK as PASS OR FAIL for RESULTS**
3. UUT may retry for the security procedure which shall fail
 - a. **MARK as PASS OR FAIL for RESULTS**
4. SAS Test Harness shall not receive any Registration request
5. Monitor the RF output of the UUT from start of test until 60seconds after Step 3 is complete. Verify that UUT shall not transmit RF

7.8.5. TLS Failure When SAS Test Harness Certificate is corrupted

Section	CBSD	Domain Proxy (DP)	Required for Cert.	Test Case ID
6.8.4.2.4	X	X	M	WINNF.FT.C.SCS.5
Purpose	Test cases determine UUT conforms in TLS connection between SAS Test Harness and CBS			

Pre-requisite: The end-entity certificate at the SAS Test Harness shall be corrupted.

Procedures

1. UUT shall start CBS-SAS communication with the security procedure
 - a. **MARK as PASS OR FAIL for RESULTS**
2. Make sure UUT uses TLS v1.2 for security establishment
 - a. Make sure UUT selects correct cipher suite
 - b. UUT shall use CRL or OCSP to verify the validity of the server certificate.
 - c. Make sure that Mutual authentication does NOT happen between UUT and the SAS Test Harness
 - d. **MARK as PASS OR FAIL for RESULTS**
3. UUT may retry for the security procedure which shall fail
 - a. **MARK as PASS OR FAIL for RESULTS**
4. SAS Test Harness shall not receive any Registration request
5. Monitor the RF output of the UUT from start of test until 60seconds after Step 3 is complete. Verify that UUT shall not transmit RF
 - a. **MARK as PASS OR FAIL for RESULTS**

Results:

Criteria	Results	
Configure SAS Test Harness to accept the security procedure and establish the connection	☒ PASS	☐ FAIL
Make sure Mutual authentication happens between UUT and the SAS Test Harness. UUT uses TLS v1.2 and has correct cipher suites selected. UUT shall use CRL or OCSP to verify the validity of the server certificate. Mutual authentication does NOT happen between UUT and SAS Test Harness	☒ PASS	☐ FAIL
UUT retry for security procedure which shall fail	☒ PASS	☐ FAIL
Monitor the RF output of the UUT from start of test until 60seconds after Step 3 is complete. Verify that UUT shall not transmit RF	☒ PASS	☐ FAIL

7.9. CBSD RF Power Measurement

Definition

- These test cases demonstrate the conformance of the CBSD due to limitations on transmit power.

Initial Conditions / Test Pre-conditions

- CBSD has gone through SAS discovery process and can authenticate with the SAS Test Harness.

7.9.1. UUT RF Transmit Power Measurement

Section	CBSD	Domain Proxy (DP)	Required for Cert.	Test Case ID
7.1.4.1.1	X	X	M	WINNF.PT.C.HBT
Purpose	Test cases determine UUT conforms with limitations set for transmit power.			

Procedures

1. Ensure the following conditions are met:
 - a. UUT has successfully completed SAS Discovery and Authentication with the SAS Test Harness
 - b. UUT has registered with SAS, with CBSD ID = C
 - c. UUT has a single valid grant G with parameters {lowFrequency = FL, highFrequency = FH, maxEirp = Pi}, with grant in AUTHORIZED state, and grantExpireTime set to a value far past the duration of this test case.
2. UUT and SAS Test Harness perform a series of Heartbeat Request/Response cycles, which continues until the other test steps are complete. Messaging for each cycle is as follows:
 - a. UUT sends Heartbeat Request
 - i. cbsdId = C
 - ii. grantId = G
 - b. SAS Test Harness responds with Heartbeat Response including:
 - i. cbsdId = C
 - ii. grantId = G
 - iii. transmitExpireTime = current UTC time + 200 seconds
 - iv. responseCode = 0
3. Measure power on of the UUT and verify it complies with maxEirp setting.
 - a. **MARK as PASS OR FAIL for RESULTS**

Results:

Criteria	Results	
Power of UUT complies with maxEirp setting	☒ PASS	☐ FAIL
